COMPLAINT INFORMATION:

Complaint #: 414840
Complaint Type: Company (other than automobile)
Date Received: 9/12/2001
Primary Complaint Classification: Credit or
Billing Disputes
Secondary Complaint Classification: Delivery
Issues
Complaint:

To whom it may concern:

Mr. Steve G. Bozak was contacted in mid July 2001
regarding products (eg.
antennas and coax cables) which were available
for sale from his firm. Mr.
Bozak quoted prices and then later changed the
quote to reflect higher prices
(25% higher) without my authorization. Mr. Bozak
concludes that since I gave
my credit card info that I agreed in principle
with the altered price quote
(which I did not agree too).

In addition to the order being 2-3 weeks late
(because his firm did not have
enough coax cable on hand), I then had to follow-
up and specifically request
a copy of the original billing invoice. When the
invoice was finally received
in late August, and after noting the higher
prices charged, I immediately
called and complain to Greg (Bozak's sales rep).
Greg was informed that I

received a lower price quote in mid July. Greg requested that I forward that
quote which I did. After reviewing, Mr. Bozak wrote back on September 12,
2001 that "I am sorry for the confusion about the prices.... every effort
has been made so this does not happen."

Thus, Mr. Bozak concedes that he (and his organization) screwed up but they
want me to eat the higher costs. This is why this matter is being forwarded
to your offices for recording and resolution purposes. Prospective customers
need to know about Bozak's deplorable customer service/business practices.

Channel 13 - WLOS TV in Asheville, NC is reporting that a number of gas stations in WNC are closing down due to an outage at the supplier's terminal in Spartanburg, SC. The terminal outage is said to last 3 days or so.

Just a heads up - if you're going to Shelby this weekend, might wanna keep 'er topped off as you travel through the affected areas. Just got this clip from http://www.wlos.com./

Mountain Fuel Shortage
Hurricane Katrina has knocked out power to many areas in the Gulf States and that's affecting the two major suppliers of fuel in the Southeast.

That means delays in fuel deliveries to stations here in Western North Carolina. Wednesday morning we found that some gas stations only had premium. And at least one station, is selling gas for more than $3 dollars a gallon. People are urged to cut back on unnecessary trips and to conserve gasoline as much as possible. If the gas problem continues for several days, cities, towns and counties may ask police and firefighters to stay overnight to be sure they can get to work.

My XYL said she saw/heard Larry King telling people last night that ham radio could be the best way of getting information to and from the affected areas.

I have been listening to SATERN on 14.265 handling emergency/H&W traffic.

In South Georgia, gas deliveries to some stations have been suspended until
further notice. In North Georgia stations are running out in smaller towns,
and shipments aren't expec6ted before another 3 weeks. At least one small
town Sherriff's department has pulled all patrol cars off the street and is
only sending out .
for emergencies.

Ga Governor's office has lifted restrictions on truck drivers carrying gas
supplies to allow them to drive more hours than they were previously limited
to.

I was going to drive up there. It is about a 300 mile drive for me. I changed my mind because I'm not sure if I will be able to get gas. From what I hear, they are closing gas stations for the weekend around here. I guess I don't need anymore radio suff that bad.

4030. FS Ham IV Rotor

FS a CDE Ham IV Rotor and Control Box. It has not been used in several years and will need lubing and the cable terminal board on the Rotor will need replacing. Some of the screws on the terminal board have rusted into to place. The Control Box is in nice shape and Rotor has only been used a couple of years before being stored. It should clean up and make a very nice, strong unit.A copy of the manual is included. Digital pictures are available. Price is $225 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

If you come thru Gaffney, SC on I-85 there was fuel at $2.65 (as of 2 PM
8/31) on exit 92 (Pilot and Petro). I notice a lot of spaces that had not
been taken at Shelby (I was over there today putting up my tent). There are
quite a few campers there as always, and more will prolly arrive tomorrow.
I hope it will be a good ''fest inspite of all the fuel troubles.

Beware of the spike at the begining of the square wave from the
inverter...I have heard of people killing their laptops because of it.
I'd run the inverter thru your UPS in hopes it would filter or nullify
that peak which one fellow measured at 600 volts here(for a millisecond
or less)

I was able to pass a Emergency message via the SATERN net on 14.265 . A
station in the area was able to relay it via the Coast Guard. Ham radio is
alive and well.

Those of us with decreased eysesight favor the bright fluorescent
displays because we can read them much easier than the LCD panels.
The latter try to stuff so much info on the itty-bitty panel so that
a magnifying glass is necessary to make sense out of it. At least
the first generation LCD panels (such as on the ICOM 229H) had large
digits for frequency readout albeit incandescent backlight. The
current generation (such as on the ICOM 2100H for instance) are not
too bad if you are close up and view it head-on. Both of them are
"square box" fronts, too.

I can't comment on Kenwood or Yaesu because I don't "do" those brands.

Agreed, I hope it'll be business as usual. With Dayton spinning down,
it's good to see Shelby still standing strong.

For those coming up from I-85 south, I'd say top it off in the
Greenville/Spartanburg/Gaffney area.

For those coming in from I-85 north, better catch some no later than
Gastonia or Belmont just before you turn off of I-85 onto Hwy 74.

For either situation there's convenience stores and/or truck stops at
many exits.

I am a DEC with ARES and have been told by a number of newer hams that ARES is obsolete in the 21st Century.

It was pointed out to me that echo link, cell phones, wireless internet etc etc. obviated the need for a "bunch of old farts" that couldn't read the handwritting on the wall...

We all watched in amazement as New Orleans was relagated to the Stone Age. All the wizz bang technology fell on it's hind parts. No cell phones, no internet, no echo link, no communications.

No emergency system that relies on intact infrastructure can be relied upon period! Those who fail to heed this lesson, are doomed to repeat it.

Now take it one step further and change the disaster to a nuclear explosion. The EMP wipes out all the rest of the neat toys necessary to communicate in the digital modes.

The SOS and requests for help being transmitted on CW from an old tube type rig go unanswered, as no one can understand code. Mores the pity.

Phil, I do understand about that decreased eyesight.....it can be frustrating trying to see those small displays. I do favor the larger characters. I have a Kenwood 570.....it falls into this category. Once again, there are quite a few styles so it is easy for somebody to fine something that is appealing.

Hello all

Can anyone advise me of what conditions arose from above mentioned unit being hit by lightening ??
The first thing that came to mind was the power cord and in-line fuse
Fuses showed OK bu haven't checked the diode as yet
Would like your input as to your experience on the outcome
What parts were replaced etc etc.
Thank you
I will pass info on to a friend
Thank you John
I can be reached at

FS a CDE Ham IV Rotor and Control Box. It has not been used in several years and will need lubing and the cable terminal board on the Rotor will need replacing. Some of the screws on the terminal board have rusted. The Control Box is in good shape and the
Rotor has only been used a couple of years before being stored. It should clean up and make a very
nice, strong unit.A copy of the manual is included. Digital pictures are available. Price is $175 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

Today, there are a "fair" amount of 'festers on site with the camper section near 74 Business full. The guy next to me is from New York, so some aren't afraid to travel. The Exxon out there on 74 and 74 Business had their gas at $3.39 per gallon! Petros in Gastonia 10 cent cheaper.

IMHO, this is nothing but a lousy attempt to take advantage of one situation and "claim" their huge price increases are valid; it is a GOUGE that I hope BACKFIRES on the oil companies. It's time for consumers to simply NOT buy for a few days and see what happens. Of course, I suspect the gas price will "mysteriously" begin to drop after the Labor Day holiday disguised as refineries being "repaired" (how concidental that they get repaired right after Labor Day because they can "hide" under the disaster.) I hope they CHOKE on their ill-gotten profits! :(Me, except for attending the hamfes)t, I am sitting at home until the SOB's rot; I can WALK to the grocery store if I have to!

Well -- I agree that the price bump in the last few days is
suspicious. On the other hand, consider the following:

o Forty percent of the nations refinery capacity is at an absolute
standstil.

o The main pipeline feeding the entire eastern half of the US for
what refined products ARE available in storage terminals is running
at less than 30% capacity.

o The Gulf Coast has the landing terminals for 50% of all crude oil
consumed by the US.

o Every agency on the ground says it will be *weeks* before things
are back to normal.

Everything we learned in high-school economics tells us: Prices are
going to rise. I fear that it is going to get worse before it gets
better. If it makes you feel any better, buy energy stock.

> It's time for consumers to simply NOT buy for a few days and see
> what happens.

Well, the trick is not to move your purchase decision - a deferred
purchase is still a purchase. The trick is to actually lower
consumption -- something that, for good or for bad, my countrymen have
not shown a great interest in for decades.

> Of course, I suspect the gas price will "mysteriously" begin to drop
> after the Labor Day holiday disguised as refineries being "repaired"
> (how concidental that they get repaired right after Labor Day
> because they can "hide" under the disaster.)

I cannot believe someone wrote that - Do you honestly suspect the oil
industry conspired to make a hurricane happen near a busy travelling
weekend? Sometimes an amazing coincidence is just a coincidence.

Reminds me "And the second gangster says to the third, `but how were
you able to arrange a flood?' ... " [1]

> Me, except for attending the hamfes)t, I am sitting at home until
> the SOB's rot; I can WALK to the grocery store if I have to!

A great idea all the time -- good for one's health, good for the
environment. Now if we just had urban planning that put the grocery
stores a teeny bit closer to where we lived ...

Of course, I live down in XE land, so we have abundant cheap gasoline
(US $2.15 at current exchange rates) and I have three grocery stores
within a five minute walk of my house.

Good for you. The closest grocery to my house isa couple miles away.
It is down a busy highway with no place to walk, and I have to use a
cane so walking to the grocery is out of the question. Because of this
I try to arrange to stop at the grocery when I have to leave the house
for another reason.

As I always say, "We all have our bears to cross!" ;-)

Most of the cellular sites I've seen around here have backup
generators and fuel for 12 to 24 hours. Other areas may not have them,
but they should.

Your challenge is rather silly and infantile.

Perhaps it is indicative of the malaise that
prepossesses Yankland when Yankland visits the
same style of destruction on the innocent
citizenry of the World?

You did not help me during WWII.

I am not showing "utter disregard for the suffering
of the people". Far from it, but your self-obsession
and the self-obsession of Yankland might lead you
to think so.

Eastern Europeans might disagree. US intervention in WWII
enabled the creation of the Soviet Empire along with its
Iron Curtain.

A good point.

WWII was started by Britland with the express purpose
of dispersing the invaders from Poland, and yet the
war ended with invaders in Poland.

Therefore, Britland (and Yankland for all its pompous
posturing) _LOST_ WWII.

Who were NOT British, French, Belgian, Finnish, Irish, Canadian,
Scottish, Aussie, NZlanders, American or German.

If I recall ancient history, ca 1991, Poland is FREE!
>
> Therefore, Britland (and Yankland for all its pompous

German's surrended, NOT Brits or Yanks or the members of the above list.

Get your head out of the 'pint' and do REAL history!!

We love you anyway.

We or at least "I" don't judge a whole country on the potty mouth of one.
We're still your friends and probably will be for life! It is sometimes hard
to ignore a$$ holes without defending oneself, but that truly is the best
course of conduct. Maybe one day he'll find himself in the midst of some
terrible plight and as he lays there suffering, he'll think back of all his
assinine words.

It's an Icom 211, of course it doesn't work.

I gave one of these to a friend, who also had one. He needed two to
keep one running. I always said that it was a tribute to his
character that I gave him an Icom 211 and we remained friends.

I, like many other owners of the IC-211, have one that still operates
perfectly. Mine has never failed since the day I bought it new. And
it still looks brand new.

From: Pasi <tuomi@sci.fi>
Message-ID: <dfbl9ofpi1@phys-news1.kolumbus.fi>
Source record: 13807

I have SSB Electronics transverter LT2S. Its 116 MHz crystal oscillator is about 500 Hz off the frequency eg. running somewhere 116 000, 500 kHz. How could this be tuned to pulled 116 MHz? Or is even impossible/too hard to do?

See picture http://www.g1ogy.com/projects/LT2S/page13.jpg

The oscillator is T1/Q1 I am talking about. Any ideas, any help?

Lucky you. One of my troubleshooting efforts involved fixing the
digital readout, which was intermittent.

I resorted to completely sucking all of the solder off and resoldering
every joint. After that it was very erratic. I finally determined
that one CMOS DIP didn't have 5 Vdd on pin 14 like it should have.
Further examination revealed that there wasn't even a circuit trace to
pin 14. Vcc went to pin 13 and apparently Icom used a solder bridge
from 13 to 14 to power the chip. When I cleaned off the solder I
broke the connection. A wire jumper fixed that but the Mickey Mouse
synthesizer module was hopelessly unreliable, especially while mobile
in motion.

The IC-211 wasn't really suitable as a mobile, even though Icom did
provide a mount for it. That's why they came out with the IC-245/SSB.
You need to remember that the IC-211 was the first radio of that type
ever produced. You can't compare the ham radio technology of the 70's
with what is available today. For its time, the IC-211 was an amazing
radio. As was the IC-701 which I also have in pristine condition.

I found that there were a few rivets used for "through hole" connection
to connect traces on
one side to the other near the synthesizer. I soldered those and the
synthesizer worked better.
Mi 211 sets on the shelf with a broken switch :-(

I can't believe how many scumbags there
are profiteering off of Katrina on e-Bay
right now !!

Alot of them say that some of the proceeds will
go to Disaster relief when everyone knows these
fat smelly opportunistic bastards won't send one single
dime in to any charity anytime or anywhere and will
just pocket the proceeds and walk away laughing.

I knew these gypsy dealers we all used to see at the hamfests
each and every year were lowlifes and scumbags, but this really
takes the cake and the silverware! What a bunch of cheap ass
lying bastadts !!!!

(Wonder how may of em are pulling the same crap on the
many other swap-and-shop boards?? Not all hams do this
of course but the ones who are really stink like shi+ - disgusted.)

Indeed, there are not so drastic measures consumers can take. Of course,
when the price of a commodity rises beyond the price the public as a whole
is willing to pay, then the demand falls with an often matching fall in the
price. If we just stop in our harried schedule to think, "Wait a sec. Is
THIS trip really necessary?" Or, "Can I combine this with an other errand
tomorrow". If we made a conscious effort and goal of saving ONE gallon a
week in our own driving, how much would that impact the demand for fuel?
One gallon--even two--for every vehicle in the USA saved. How about a more
ambitious goal? One gallon per DAY=5 gals per workweek X how many drivers on
the road at a time = what? Of COURSE, there are trips and business that must
be made/done. OTH, how many times do you just hop in the car without a
second thought to run down to the Radio Shack and pass the SAME store the
next day going to the grocery store? How about slowing down to 55-60
instead of 70 per?
How many Escalades do we see each day with ONE person when we could carpool
to work (some DO carpool but there are untold numbers that "prefer" to have
their car to themselves Heck, I press in the clutch on my little truck and

coast down long hills often maintaining 55 while the engine is idling at 600 RPM; at steady state, the engine is at 1700 @ 55, 2100 @ 70. If I don't just HAVE to go, I will just stay at home, piddle in my shop and watch TV. We ALL have to do a little to prevent the profiteers from taking advantage of our spoiled habits of yore. I KNEW "them" Surburbans" would come back to bite us eventually!! :)

Are you "sure" about that? Somewhere in the news I heard that E-Bay was
setting up a program where the proceeds from sales could be sent directly to
them to be put toward the relief effort! Maybe the sales of these items ARE
for this purpose. "I" could be wrong but that is a possibility.

If anyone is using diesel, the local Giant food store here in Laurel, Maryland is selling their brand name vegetable oil and Crisco oil in bottles of a little over two quarts (as of September 2) on sale. It works out to be about $3.10 per gallon.

(Today, diesel fuel here was priced at +/- $3.65 per gallon.)

A friend of mine is using Crisco in his diesel powered Dodge Ram 2500 pickup truck.

He says he gets 25 to 27+ mpg on the highway (about 10% less than diesel fuel), vegetable oil provides better lubrication for the fuel injectors than diesel fuel and it doesn't stink of diesel. He says the diesel engine exhaust smells like McDonald's french fries.
:-)

Hi all, I have a Yaesu FT-7400, which is a 440 mobile radio.
Any one have a clue how to adjust the LCD back lighting, or turn it off
or on??

The FT-2400 is the 2 meter version.

THANKS FOR YOUR HELP!!!

My FT 2400 has no adjustments for the LCD. It is supposed to be automatic.
For instance. When the ambient light is bright, the LCD is supposed to get
brighter. Conversely, when it is dark, the readout becomes dimmer. This is a
stupid design flaw that, fortunately, Yaesu corrected with the FT 2500.
Another common problem with the 2400 is that the freq. selector knob often
malfunctions and either skips step up and step down, or fails to work
altogether. You will then have to use the Up Down keys on the mic.

Before you blow a gasket, check to see if any listing in question has a
little blue ribbon by it. Per Ebay, (http://givingworks.ebay.com/)
there is a valid contribution campaign available.

Do a search on SVO (straight vegetable oil). It is a good match for most diesels, but it usually won't start the engine, and at room temperature is borderline too thick to safely pass through the injectors. The solution to these problems is to start the engine on diesel, and use the engine coolant to preheat the SVO. When the engine is up to temperature, switch to SVO. When you are a couple of miles from the end of your trip, switch back to diesel (to clear the filters, pumps and lines of SVO)

Also, if your friend doesn't want to have to fill his truck bed with empty VO bottles, he can buy the stuff in 55 gallon plastic barrels for a much reduced price.

-Chuck

OBTW, using SVO in an on-the-road vehicle is illegal both federally, and in most states, as you aren't paying the required per gallon road taxes. The road taxes amount to about $1 per gallon of the price of fuel. It is also illegal to run a hybrid using a battery charger, for the same reason... non commercial use is unlikely to be

caught in the near term, however. As SVO becomes more popular, I am sure that the local constabulary will find ample time to pull over any vehicle that smells like a fryer. The fines for running untaxed motor fuel on the road are very steep.

It's acidic enough that it will eventually corrode the fuel injectors
if he does this for too long without adding some buffering or cutting it
with diesel. But that should be fine to get us through the current
shortage.

Likewise my local paint store is selling VM&P naptha for around $2/gal.
A gasoline engine won't run on it alone terribly well, but you can cut
gasoline with it without any harm. (Admittedly I say this as a guy
with a car that predates catalytic converters).

Hmm... what are alcohol prices slike?

Message-ID: <3TESe.18076$7f5.10998@okepread01>
Source record: 13833

I have a good working Kenwood TS-440SAT for sale. It includes the optional IC-10 which allows computer assisted control of various transceiver functions via the IF-232C interface. I have the original box, manuals, and power cord. There is some wear on the front panel around the Trim Ring of the Front Panel.
The Front Panel and the rest of the cabinet look good. Price is $375 plus shipping. Thanks, Charlie Hugg, K5MBX

I have for sale a clean MFJ Model 259 Antenna Analyzer. It works great, but needs a battery case. The one that came with it fall apart like many of them do.
It can be operated from an external power source like a wallwort, not included. This unit comes with the original box and a copy of the manual.
Price is $125 plus shipping. Thanks, Charlie Hugg, K5MBX

Radio Specialty Model 1179-22-1 Repeater----------------$ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed, but inside is very clean!
Repeater is in a wall mountable battleship gray cabinet,
that is 4" deep by 13.5" wide, by 21.5" tall, and is
around 30# in weight. It is a VHF base/repeater used by
the BLM out west...
It also has on the front cover, I-5YACC, then under it is
271, under that VHF REPEATER. There are a lot of FCC type
acceptance # all over inside, plus the maker, and maker's
partial address, and part # for transmitter, and receiver
sections.
NO documentation.

2 Kenwood TR-7950-----------------------------------EACH-$ 80
Each comes with mobile mount, and 1st sale gets the
packet adapter. Are in very good shape, but do not include
the TU-79 PL boards which are available at www.piexx.com
They will not come in original box, and if I do not have
the manual, I will photocopy, or pdf one (your choice)...

VX5R YEASU BLACK 5W 6/2/4.5W440HT---------------------$ SOLD
FNB58LI 1200MAH LI-POLYMER
FBA23 YEASU 2 AA CELL BATTERY CASE
CD15A YEASU CHGR STAND
VX5R is like new as are all the accessories.
Both battery packs accept a full charge.
The antenna is also complete with end-cap
and 6M add-on.
Comes complete plus box and manual.

Standard C468A LNIB-------------------------------------$ 75

LinkXcel PS-141B 4 port KVM Switch with 4 cables---------$ 65
-Like New- This is the PS2/VGA model -No manual-

Pioneer DRM-602X Scsii cd changer that uses Pioneer------$ 15
audio cd carts.

All items will include manuals unless noted.
Shipping is NOT included on any item(s).

How about if I brew up some moonshine and run it in my '31 Model A Ford (hic, excuse me)? ;)

Can you provide cites? I can't beleive that i would be breaking a law if
I drove a solar powered vehicle.

Why can't you believe it? The states and feds want their road taxes even more than they want a solution to the fossil fuel problem.

Diesel for off the road tractors, and earth movers is untaxed, and is dyed red to make it obvious if a vehicle has ever used the stuff. (It stains the tank red, and the filters. Truckers get checked for this problem at weigh stations. On this I have first hand experience, as I run farm tractors, and earth moving equipment.

Here is a cite on that:

You may have smoked the 20 ohm 1/2 watt final cathode resistors R2, R3, R4, R5. This can give the symptoms you describe, no output and pegged plate current reading. The plate current is not actually high, but the meter reads the voltage across the cathode resistors to display current, if they are open it reads very high. Be sure to use a non-metalic adjusting tool around the finals.

Good luck, the TS-830 is a fine old radio, I have had mine for 20 years and it is still doing its job for me.

I have a CDE Ham IV Rotator for sale. It is complete with the rotator, control unit, and copy of the manual.The control box is the Black one. This Ham IV is going to need some work. The terminal strip on the rotator will need replacing and the bearings will need replacing also. They are rusted.
This one has been setting for several years. It was working at the time it was taken down. I plugged the control unit in and nothing blew, but the dial light is out.
Price is $125 shipped within the lower 48. Thanks, Charlie Hugg, K5MBX

Hi, thanks for your input. There is something messed up with the radio.
Picked it up used. When I first turned it on it lit up, then went off.
I jumped
out the photo sensor but still no lights, No biggie, still easy to use
in the shack.
THANKS, 73

I know about using heating oil being illegal. But sure enough, I googled this subject and various state DOT's are trying to get Bio-Diesel categorized for taxation. Still they are not talking about going after solar power, but I am sure that is coming next. By the way, there is a new "initiative" called "open roads", which is everything but open roads. They are trying to put RFID transponders in every car and extract tolls from everywhere you drive.

Not only that, but those inverters are notoriously bad noise generators.
I've tried to use them for transmitting and gotten switching noise on the
carrier (several dB), and had lines in the monitor when trying to use a
computer.

Source record: 13691

If your harmonics are causing TVI problems, an MFJ-704 could keep your neighbors happy while you have fun hamming.
MFJ's Super Low Pass filter simply plugs between your rig and antenna. It suppresses TVI, RFI, telephone and other interference by reducing unwanted harmonics going to your antenna. At the same time your HF signal passes on through with low loss so you can snag rare DX.
Nine Chebyshev poles, MFJ's exclusive TeflonDielectric Technology capacitors, Hi-Q inductors, ground plane shielding and an RF tight cabinet give you excellent TVI and RFI protection. (Right from the MFJ flier.) Instructions & box included. ONLY $19.95 plus $8.95 shipping and insurance. First e-mail gets it! 73, Bill - WA8MEA - ars_wa8mea@netzero.com - http://HamRadioFun.com

Has anyone used this software to study with? I have a friend who is interested in becoming a ham and I am researching study materials. The demo looks pretty promising.

Anyone out there who tried it and liked it? Any ham neophytes who actually learned the subject matter? All comments welcome.

Also is the question pool up to date?

Thanks

I went to the Shelby hanmfest last weekend. At the Alinco booth I was given an Alinco Catalog.

On page 10 of the catalog there is a listing for the "ERW-4C" "PC Programming Cable".

I don't see any listing for DJ-596 software.
Also, I dont see a mention of this in my user's manual.

Is this only to be used with the EJ-47U "Digital Board"?

Am I missing something here????

No waviering here. The ARS proides usefull service, mostly in keeping
H&W stuff off the plate of those with better things to do.

It does not properly replace the system used by the cops as witness the
keystone cops bummbling we see and here about

the ARS is not saving the day or saving civilation, it is hellp people
lessen the impact of the disaster, what I have been saying all along

Actually, most of the questions on the real tests, especially the Tech test, cover rules, frequencies, etc that must be learned by rote memorization anyway so I recommend simply take the sample tests on www.qrz.com over and over til you consistantly score well above passing then c'mon down and take the test. We'll be giving them at the Salem Church Library, west of Fredricksburg, Va tomarrow (Saturday) morning.

One really should indulge in a good electronics course too .... It's fun.

>Amateur Radio.

"Patriarch?!?" :-) Not I, never having met in-person any of
those against the mighty warrior of "seven hostile actions,"
Dudly the Unconquerable...aka Dudly the Unhumbleable. :-)

"Waned?!?" :-) Life goes on 2000 miles away from the Katrina
hurricane devastation.

Ahem...the "MAJOR media" are reporting as much as possible about
the Gulf Coast damage. That is of considerable quantity.

Reporters, journalists, telecasters are all on-the-scene covering
an enormous area of extensive damage with many, many "human
interest" stories appearing. Anybody with a working TV set can
see/hear that; anybody with a working BC receiver can hear that.
Anyone able to read a major newspaper can read that. Anyone with
a working PC and an Internet connection can find that out.

What Dudly is doing in here is just ordinary FLAMING because he
is obsessed with FIGHTING. [wannabe-warriors get that way...]
Yes, stories have been filed with newsservices on amateur radio
doing their part in aiding the relief effort, but are those
relief actions of amateurs of any notable effect on society as
a whole? Health and welfare messages have not been shown to "save
lives" on any large scale...a large scale such as a MILLION

displaced and homeless citizens in the Gulf states affected by Katrina. Perhaps nearer to two MILLION people displace, homeless, or dead when the tallies on human lives is more complete. The scale of damage is too vast, too shattering to millions more.

Thousands and thousands of volunteers and paid workers are very busy at the moment, doing many things of DIRECT AID to the homeless and displaced, all WITHOUT any direct "need" to do radio communications about "health and welfare messages." That's important work. MOST (very nearly all) of that work can be done WITHOUT a lot of radio communications. Coordination of effort does require communications of some kind, but the "coordination" of ALL agencies, paid and volunteer, were simply NOT prepared to deal with the magnitude of damage and destruction that happened. That includes amateur radio, folks, whether it smarts your little egos or not. Did anyone really think that a few dozen hams could really make a "difference" by sending health and welfare messages from millions to other millions? No doubt the self-proclaimed amateur patriots far from the disaster scene were happy as larks to see the tiniest factoid of their Great Help to the victims of hurricane Katrina. They have waved their banners, cheered as loudly (and abusively) as possible, pinned invisible medals of valor to their equally invisible uniforms of service they wear in the newsgroups.

But, things eventually get sorted out and the REAL coordinators can organize things, start to do the REAL rescue work such as pumping out all those millions of acre-feet of flood water, finding shelter and food and sanitation for a million or more displaced and homeless people, trying to restore a large city and many smaller cities along the Gulf. The REAL health workers have been on the scene, pulling out bodies of the dead, measuring the countryside for disease, taking steps to control insect-borne diseases, preparing for the epidemics that might ravage the survivors. REAL work, down on the nitty-gritty level, done by those who KNOW what they are doing even though they are over-whelmed by the enormity of the task.

> Even the snide remarks of some lame slime from Motorola has been
>laid waste.

"Lame slime?" :-) While some consider Public Relations folks in that category, that's just inflamatory, ignorant rhetoric from a nurse who has no provable record of past "experience" in either radio communications or the electronics industry...a wannabe-warrior who can only "fight" by cursing others who don't agree with him. Disreputable activity.

Such inflammatory curse words are only in the minds of a few who have NO REAL CONCEPT of the many and various communications systems used by the "infrastructure." Motorola has been one of the leaders in radio since World War 2...surviving when Hallicrafters and Zenith

and a number of other electronics industry biggies of the Chicago area FAILED, dissolved, went bankrupt, became DEFUNCT.

The electronics industry of the United States IS HELPING, just as it did after the NYC disaster of 11 Sep 01, shipping in professional radio-electronics equipment from handhelds to "WiFi" and "WiMax" whole systems to restore the BIG communications needs along the Gulf coast. The evidence IS there in the "MAJOR news", in the newspaper business section, in the press releases of major electronics industry corporations. It isn't carried on the amateur "news" from the ARRL...such is counter-productive to promoting the ARRL and furthering the amateur mystique that some need to justify their imaginary glory of having an amateur radio hobby.

The disaster of hurricane Katrina is of unparalleled proportions and ALL humane-thinking citizens can do their part, however big, however small. There is NO AID given to anyone or anything by continuing an unrelenting stream of personal insults towards others they know nothing of nor nothing about.

Nice tutorial, Dave. Just what I would think, but it is clear that this
power supply is VERY susceptible to whatever the pan is doing. One more
suggestion.

Run the fry-pan on high, but use a real Variac to reduce the power... Not so
$$$ a solution.

As usual our resident dissident has no idea what he is talking about. Here
in Alabama we have provided the operators to man the shelters for the Red
Cross on the Gulf Coast. They have, and ARE providing the ONLY
communications between the shelters and Red Cross HQS in Montgomery.

The Alabama Net and other groups are providing links further down the line.

did you you bother to read my remarks before lighting up the flame
thrower?

But just How big is Mntgomery I was though there once long ago, and
thought it pretty small. But any reason they could not use GRMS or even
CB to make those links? I don't see any but you might know better than
I.

as to your other points.

One am unable judge for myself directly of course because of rules you
personaly have supported for years.

Two I said most com seemed to that most were H&W, Indeed given the size
of Montgomery could not they diespense with anything but messagers? Not
syaing they should but couldn't they.

The Comms provided by hams are important and of value, But I see no
report of (let alone have one confirmed) use of ham radio that rises to
the level of critcal

>
> The Alabama Net and other groups are providing links further down the line.

and what are they passing?

what vital message are they conveying?

He obviously doesn't know much about ARES/RACES. If he did, he would
know that Health and Welfare messages have the LOWEST priority after
emergency and priority traffic. There has been incident after
incident where ARES/RACES was the ONLY communication out of a disaster
area. Let alone communication with the Red Cross. The fire at Los
Alamos New Mexico is a prime example. When the phones are out, and
the public service radios fail, who do they call? ARES/RACES. The
military can handle it, but as we have seen it can take days for them
to get on site. ARS can get there within a few hours.

>> > keystone cops bummbling we see and here about

In fact it did replace the system used by the cops, and witnesses
abound.

>> > the ARS is not saving the day or saving civilation, it is hellp people
>> > lessen the impact of the disaster, what I have been saying all along

Well, until you were crossposted here, we have been entirely unaware
of what you have been saying all along. That aside, and more to the
point about your comment about ARS not saving the day, there are a
half dozen FEMA workers who would humbly admit otherwise after they
were rescued through Ham operator efforts.

>But just How big is Mntgomery I was though there once long ago, and

From your vantage deep in Virginia, I would think that Montgomery
would be quite cosmopolitan. Going beyond that however, such
suggestions as offered above seem to miss the point of HF
communications.

You should consider your choices made in informing yourself.

To Others,

I've rummaged up at least a couple of dozen references to the Ham
activities from a variety of news outlets (and not just the bobbing
heads of salacious cable TV). It would do us all well to stockpile
such commendations to "remind" authorities who so quickly forget in
the face of those who can stuff their pockets with money-for-airspace.

Virgina? I don't live in Virgina

but in responf to a quip about the shelters in Montgomery being linked
by Ham radio HF would hardly seem likely to be involved

All Things Considered, August 30, 2005 ï¿½
While cell phones and other communication networks were demolished
by Hurricane Katrina, a group of radio operators volunteering with the
Red Cross have been instrumental in assistance and relief efforts.

NORTH LITTLE ROCK -
... Temple is president of the Central Arkansas Radio Emergency Net.
When Hurricane Katrina knocked over cell phone towers and utility
lines, ham radio became a key communications tool.
Temple says ham radio operators have acted as go-betweens for
Louisiana hospitals needing help and Arkansas aid workers.

Ham radio operators provide vital link after storm
Thursday September 01, 2005
ROANOKE, Va. (AP) ... Then an urgent voice sliced through the static,
clear as a bell.
``I have a diabetic, 80 years old, out of food and water for the
last 24 hours,'' it said.
An elderly woman from Bush, La., was stranded in her home after
Hurricane Katrina and desperate for food and insulin. Somebody sent
the message out over the air. Other voices picked up the call and it
was relayed all across America until, with luck, it would reach a
local rescue squad.

Ham Radio Operators Rise to Occasion of Another Disaster
BY CHUCK McCUTCHEON
c.2005 Newhouse News Service
Approximately 250 operators are in Louisiana working with the
American Red Cross and state emergency response officials, with others
waiting to enter the state when floodwaters recede ....
Sept. 1, 2005

Local Woman Helping Hurricane Victims Via Ham Radio
Aug 30, 2005, 08:00 PM
A woman in central Indiana took control of one of the most powerful
emergency networks anywhere to help those effected by Hurricane
Katrina.

Somehow, somewhere in the middle of all the hurricane mess, someone is broadcasting to the world probably operating on battery power and a makeshift antenna.
Tuesday night, Indiana handled the call.
For an hour, Peggy McNary took the post of "controller" of SATERN, Salvation Army Team Emergency Radio Network.... "A family called out on a cell phone, trapped in an attic. They got word to an amateur radio operator somehow just before they lost contact, SATERN was able to contact the Coast Guard and that family was rescued," she explained.
The network claims a hand in dozens of Katrina rescues already and will operate until there is no need for more.

Local ham-radio operators help rescue effort
By Rocky Scott
DEMOCRAT STAFF WRITER
Tallahassee ham-radio operators took part in the daring helicopter rescue Friday of about 1,500 patients and staff from two New Orleans hospitals besieged by darkness, dank water and gunfire.
...
Looting and gunfire erupted and 100,000 stranded, scared residents became a force ready to spill into anarchy.
Enter the Tallahassee Amateur Radio Club, Florida Division of Emergency Management and some old-fashioned ingenuity.
State Emergency Management officials suggested Hall contact the local ham radio club to solve the communications dilemma.
Urged by rapidly rising water - 8 feet deep in places - and the growing knowledge that New Orleans had become a drowning pool, the ham operators fashioned a satellite reception device atop an 8-story building in downtown Tallahassee.
Then three of them - Theo Titus, Gene Floyd and Bill Schmidt - all boarded a helicopter in Tallahassee Wednesday and headed for New Orleans.
Atop the garage at Tulane, they set up a generator-powered ham radio with a satellite uplink.
By Tuesday afternoon, the choppers were up and running, and Hall and his co-workers in Tallahassee were able to give directions to pilots....

Reported by Justin Cavey
Ham Radio Operators Invaluable in Times of Disaster

Volunteer Ham Radio Operators to Receive Grant To Enhance Emergency Communications in Hurricane Region
WASHINGTON, D.C. ï¿½ The Corporation for National and Community Service today announced a supplemental grant of $100,000 to the American Radio Relay League (ARRL) to support volunteer emergency communication operators who are helping out in Gulf Coast states affected by Hurricane Katrina.
"With the breakdown of regular communication channels caused by the storm, the services provided by volunteer ham radio operators is

vitally important, both to organizations and to individuals seeking to connect with loved ones," said David Eisner, CEO of the Corporation. "Weï¿½re pleased to be able to provide this extra assistance at this critical time."

Ham radio operators play role in communication
By TERESA RESSEL\Daily Journal Staff Writer
Amateur (or ham) radio operators are playing a major role in communications in the states hit hard by Hurricane Katrina. The wind and rain hampered other means of communication, so it was estimated as of Wednesday that 250 Amateur Radio Emergency Service members have been working with relief organizations and emergency management agencies to assist with communication.

Ham radio helps in emergencies
Updated: 9/3/2005 11:30 AM
By: Adam Shub, News 14 Carolina
SHELBY, N.C. -- Amateur radio operators are banding together to help the victims of Hurricane Katrina.

Ham radio provides a link between hurricane victims and loved ones in West Michigan
(Grand Rapids, September 1, 2005, 8:06 a.m.) Getting in touch with anyone in the hurricane-stricken areas is almost impossible. Telephone poles and cell phone towers have been knocked down or washed away. The lack of power means no e-mail, either. But a group of people in West Michigan has a way to get through.

Ham Radio Operators Provide Lifeline During Disaster
Radio Operators Can Communicate In Stricken Areas
POSTED: 5:51 pm EDT September 1, 2005
MEREDITH, N.H.
... ham radio operators from New Orleans to Utah coordinated the effort to guide a Coast Guard helicopter to rescue more than a dozen trapped people.

As usual, ham radio operators help sustain wide-ranging relief efforts
By Andrea Kelly
ARIZONA DAILY STAR
When all else fails, it's ham radio to the rescue. Across Arizona, ham radio operators are helping sustain Hurricane Katrina relief efforts by helping storm-torn communities communicate with rescue workers....

HAM radio operators reach out
Some messages have been sent
WJRT By Joel Doepker
Saginaw - (09/01/05)
...
In one case, a victim in New Orleans called a family member outside the area for help. That person then contacted an amateur radio

operator who contacted rescue crews, who saved more than a dozen people from a rooftop.

Relief Effort
Many Pleas For Aid Go Out
Rescue Teams and Clean Water Needed
By Elizabeth Williamson
Washington Post Staff Writer
Thursday, September 1, 2005; Page A21
... "I was just a relay kind of station. The message got transmitted on into the Coast Guard, who handled the rescue," said Fillinger, 78, whose ham radio unit is based in his hilltop home in Portland, Ore. "By the evening, we got confirmation that the group had been rescued," including an 81-year-old woman that Fillinger knows only as Helen.

Ham radio volunteers help re-establish communications after Katrina
Some 700 operators are already at work, with more on the way
News Story by Todd R. Weiss
... Many of the volunteers sprung into action even before the storm struck the Gulf Coast, broadcasting as part of a "Hurricane Watch-Net" three days before deadly Hurricane Katrina slammed into the coast on Aug. 29, Pitts said

Ham radio operator tunes in to help victims
By EDIE HALL
The Kansas City Star
... Since Hurricane Katrina devastated the Gulf Coast, Goll, 81, has been getting messages to agencies such as the Federal Emergency Management Agency, the American Red Cross and the U.S. Army Corps of Engineers.

Ham radio operators to the rescue after Katrina
Amateur radio networks help victims of the hurricane
By Gary Krakow
Columnist
MSNBC
... Such rescues were repeated over and over again. Another ham was part of the mix that same Monday when he heard over the same Salvation Army emergency network of a family of five trapped in an attic in Diamond Head, La. The family used a cell phone to call out. Bob Rathbone, AG4ZG, in Tampa, says he checked the address on a map and determined it was in an area struck by a storm surge.
He called the Coast Guard search-and-rescue station in Clearwater, explained the situation and relayed the information. At this point, the Coast Guard office in New Orleans was out of commission. An hour later he received a return call from the South Haven Sheriffï¿½s Department in Louisiana, which informed him a rescue operation was under way.
Another search-and-rescue operation involved two adults and a child stuck on a roof. The person was able to send a text message from a

cell phone to a family member in Michigan. Once again, the Coast Guard handled the call.

Ham radio operator tunes in to help victims
By EDIE HALL
The Kansas City Star
... he said. "I also got a message from a group of FEMA workers who were trapped on a bridge that was about to collapse and we got them out of there."

.... hopefully this is written in suitably understandable English.

> CB to make those links? I don't see any but you might know better than
> I.

ANYONE knows better than you.

(1) There are only 35 ACTIVE GMRS licenses in Montgomery per the
FCC. To the best of my knowledge, there is NO active GMRS repeater in
Montgomery. However, with only 35 licensees, I find it hard to believe
there's more than one if there's any at all.

This means a MAXIMUM of seven repeater pairs and 14 simplex
channels and no more than 25w to fixed antennas, period.

(2) There are 378 AMATEUR licenses in Montgomery. My 2004
repeater directory shows (6) 2 meter repeaters and (6) 440 repeaters in
the city alone.

On the 2 meter band alone this includes five digital-exclusive
channels, over 30 simplex channels, and authorized power of up to
1500w.

(3) CB Radio has a ground-wave effective distance of less than 5
miles. Daytime propagation makes it completely unusable more than 2
miles away.

(4) There is no viable CB radio-based traffic handing system in
the United States. You can tattoo the message to the CBer's head, but
if they don't have the infrastructure to disposition the message, all

you've done is waste time.

(5) Montgomery's population is just under 250,000.

so now repeaters are the only means
cuting the off topic bullshit

all you do is rant mostly about things with no relavnce even make
claims that the laws of physics change somehow for cb hf

no reason advanced why the shelter even the radios at all all could be
handled less effectively perhaps by the people driving supplies to the
shelters

I see a lot of posturing

It was nice for that other poster a list a few life saving events,
though are worth knowing about

That is incorrect. All the traffic I personally relayed was
emergency requests for rescue. All the traffic handled by
the net I helped was emergency traffic, and resulted in many
many rescues. Lots of folks are alive today because of ham radio.

> and what are they passing?
>
> what vital message are they conveying?

Several days ago I heard a message being relayed to police/hwy
patrol/whomever about people trapped in an attic somewhere that needed
to be rescued.

The latest ARRL eLetter reports that in some places hams were lending
their equipment to "official" agencies because the latters' equipment
did not work.

Remember that, in this "land of the 'We'll do it our own way, thank you
very much'", many govt. agencies cannot communicate with each other by
radio even when the equipment does work: every county and municipality,
every fire dept. and ambulance service is free to decide what equipment
to use regardless of what anybody else is using. I understand that
Michigan is one of the few states with an integrated (or at least
coordinated) radio system. Where multiple agencies are trying to work
together, putting ham radio operators with each agency may be one of the
few ways they have of keeping in touch.

What's "off topic" about it, Markie..?!?!

YOU were the one who brought up GMRS and CB, Ya Putz!

And you will please notice that I clearly addressed SIMPLEX
frequencies too, so so much for your "repeaters only" diatribe, Markie.

> all you do is rant mostly about things with no relavnce even make
> claims that the laws of physics change somehow for cb hf

(1) YOU brought up GMRS and CB radio, Markie, NOT ME!

(2) I didn't claim any "laws of physics" were different for "cb hf" ! I SPECIFICALLY addressed the shortcomings of using CB radio BASED upon KNOWN propagation at that wavelength! It's the SAME reason that 10 meters is not typically used for short range emergency communications here! Add the horrific QRM on 11 meters, and it's a wasteland good for nothing except in-house intercom duties, IF that!

> no reason advanced why the shelter even the radios at all all could be

No...what you SAW here were some FACTS.

QUOTE

(1) There are only 35 ACTIVE GMRS licenses in Montgomery per the FCC. To the best of my knowledge, there is NO active GMRS repeater in Montgomery. However, with only 35 licensees, I find it hard to believe

there's more than one if there's any at all.

This means a MAXIMUM of seven repeater pairs and 14 simplex channels and no more than 25w to fixed antennas, period.

UNQUOTE

What is "posturing" about that, Markie? Nothing there is mistruthful or deceitful. Also please note the aforementioned use of OTHER-THAN "repeater" options that you tried to claim was my only point.

QUOTE

(2) There are 378 AMATEUR licenses in Montgomery. My 2004 repeater directory shows (6) 2 meter repeaters and (6) 440 repeaters in

the city alone.

On the 2 meter band alone this includes five digital-exclusive channels, over 30 simplex channels, and authorized power of up to 1500w.

UNQUOTE

One correction on my part...There are "374", not "378" Amateur licensees in Montgomery...And that's just folks with a Montgomery mailing address.

Again...I'd be interested in what part of those numbers are "posturing", Markie.

And again, OTHER than "repeater" options are addressed.

QUOTE:

(3) CB Radio has a ground-wave effective distance of less than 5
miles. Daytime propagation makes it completely unusable more than 2
miles away.

UNQUOTE

You dispute this, Markie?

QUOTE

(4) There is no viable CB radio-based traffic handing system in
the United States. You can tattoo the message to the CBer's head, but
if they don't have the infrastructure to disposition the message, all
you've done is waste time.

UNQUOTE

Wondering what part of THAT is "posturing", Markie.

P L E A S E point me to the URL for the CB-radio based traffic
handing organization in the United States...Please...

QUOTE:

(5) Montgomery's population is just under 250,000.

UNQUOTE

YOU said that you remembered Montgomery as being small. So now
the Census numbers are "posturing"...?!?!

> It was nice for that other poster a list a few life saving events,
> though are worth knowing about.

Stuff like that is going on every day right now. It will be a long
time before Motorola and the other manufacturers can get the gear into
the field and working.

So...Amateurs created KATRINA just so we could "posture" in a
newsgroup...?!?!

Steve, K4YZ

michigan is still working on this system sad to say although they are
trying fairly hard and have made a lot of progress compared to much of
the nation

Now the goof calls me a liar. I have been sitting on HF for the last WEEK helping the shelters talk with each other. Montgomery needs commo into places like the Gulf Coast, Biloxi, Gulfport, and of course New Orleans. Get a flippin map and tell me how VHF/UHF is going to make those distances?

Montgomery is the capital city of Alabama. Not what I would call a small town.

Sure they could. And if we still had WWI carrier pidgeons they could be
used also. Or perhaps they could mail a letter.

> The Comms provided by hams are important and of value, But I see no

Then I suggest you listen in and find out what is being passed. I will be
posting on rec.radio.amateur. policy the statements from the ARRL on this
subject. Perhaps that will help you to understand.

>
>>
>> The Alabama Net and other groups are providing links further down the
>> line.
>
> and what are they passing?
>

Everything from relaying between shelters (because of poor conditions, or
poor antennas or both), helping various operators with finding links to
other nets, Health and Welfare such as passing messages (at our expense)
from the disaster area to families of those in the area. I personally
participated in passing Emergency traffic from Huntsville AL to New Orleans

Coast Guard about a family trapped in a house and needing their help. Additionally I relayed between a very weak HF station in New Orleans to Tallahassee Hospital to "tell the aircraft to come up on VHF". I have no idea what that meant. But I have no doubt it was important to someone.

I am just ONE operator doing what I can. How about stop criticizing those that are.....you may learn something.

I never said any such thing. I was talking about comms in/out of shelters.
You think ALL the shelters are in one town?

Are you seriously this out of step with the rest of ham radio? Seek mental
health help. You have been fixed, right? Please say yes.

Perhaps I am indeed I suspect I like a lot of the long term memeber of
the tech class are largely cut off from the rest of Ham radio. OTOH
that is a result of decisions and rules you have supported for years

Who cares? What are the chances of him being stopped by an IRS
"revenuer" or a state official because his exhaust smells of french
fries?

Nil!

Sure they could mail a letter. After the US postal service reopens
mail service to the affected areas. There were notices on the USPS
website telling that next day, and some other mail services were not
available for the time being.

How long would it take to show corrosion of the fuel injectors?
50K miles? 100K miles?

>But that should be fine to get us through the current
> shortage.

That's right! And, now that the prices for diesel fuel are dropping,
Crico oil is more expensive.

You might be more credible if you could spell a bit better. At least
use a spell checker so you appear to be less of an idiot.

Of course, your arguments would still be suspect even if you did that.

Getting better all the time! When it was just one or two cars doing it, the chances were nil. But now there are websites dedicated to running SVO, or biodiesel. The legislature in MD, for one, had already addressed the issue, and will be taxing biodiesel in all forms.

Considering that the fine is in the thousands of dollars, it might be important to you if you decide to run SVO, or off road diesel.

This is to 'an old friend' in particular and his dingaling buddies.

Perhaps this E-Mail I just received from the Alabama Section Emergency Coordinator will "HELP" 'an old friend' to understand. Anyone want to bet?

Please notice the comments about using tactical and formal message handling. FYI tactical would be to dispense with the formal headings. Just use the basic address/phone number. Then the operator that received the message makes a phone call to deliver anywhere in the world that allowed 3rd Party traffic.

Formal should be self explainatory, but knowing the abilities of Mr. 'an old friend' I'll translate....It is using standard ARRL Formatted messages as in;

Number 139 W (Welfare) W4NTI CHECK 12 ANNISTON AL SEPT 10
TO MR JAMES KIRK
STARSHIP ENTERPRISE
ANYWHERE IN THE UNIVERSE ZIP CODE
PHONE NR
BT
ALL IS WELL HERE MR. SPOCK X HOPE
TO SEE YOU SOON BT JAMES T. KIRK

BT

NNNN (MEANS NOTHING FURTHER) (USUALLY SENT IN CW OR DIGITAL MODES AND NOT USED IN PHONE)

You do notice the word 'sites' right? That is plural for many locations.

I especially want your response to the paragraph concerning the highly vaunted 800 mhz system. That FAILED immediatly. Then please comment about the use of Hams to DISPATCH Police and Fire. Not to mention the comment of how these same hams helped FIX these sites to attempt getting the Police and other Emergency agencies back on line.

Please also note that these Ham teams VOLUNTARILY PUT THEMSELVES into the middle of one of worst, if not THEY worst ecological disaster in this countries history. Providing their own equipment, their own supplies, their own gas, etc. Note how much that is appreciated and does not ADD to the problem.

No bragging, no looking for headlines, in fact NO NAMES AT ALL. So tell me 'an old friend' where is all the bragging????????

I doubt this will do a bit of good with you and your 1/3 of the newsgroup
that support you. But these are the facts. Believe it if you want.

OR.....just remove the egg off you face and drop the subject.

Dan/W4NTI

SPECIAL EDITION TWO: HURRICANE KATRINA FOLLOW-UP

It's been quite a week of studying the ARES response to Hurricane Katrina while keeping a wary eye on storm Ophelia, just off shore here in Flagler County, on the Florida central east coast. Local ARES was on alert. We had winds and driving rain as Ophelia tried to decide which way to turn. Yesterday, it marched to the northeast and today we have an uneasy, almost surreal calm. But, the sky is clear.

Back to Katrina: I can't remember a more comprehensive ARES response, especially in terms of inter-county and interstate mutual assistance, plus the concomitant, unprecedented activity by ARRL HQ staff in support of that response, ever. Even the Chief Operating Officer Harold Kramer, WJ1B, worked over the Labor Day holiday weekend. And word arrived yesterday that the "Hurricane Katrina Amateur Radio Volunteers Needed Clearing House" now is live on the ARRL Web site <http://www.arrl.org/FandES/field/agencies/>. The ARRL Letter: "This database will be the primary means for relief organizations requiring Amateur Radio volunteers for communication support to list their needs. Additionally, volunteers looking to help may search the listings to match up their capabilities with the various requirements." That is a first, as far as I know. Credit Joe Tomasone, AB2M, for the Hurricane Katrina Disaster Communications Volunteer Registration and Message Traffic Database he developed.

On the Northern Florida ARES Net this morning, a report was made that "renegade" hams were turned away from an affected area and were to be

adorned with "metal bracelets" if they did not leave. Message: Coordinate your volunteer efforts with your own home ARRL Section Emergency Coordinator (SEC), or his/her designees. Also, be prepared to be self-sufficient: "If you need it, you bring it," advised Alabama SEC Jay Isbell, KA4KUN. - K1CE

"All of us know this will be a months-long effort. Just because we are unable to immediately send those of you who have registered, that does not mean we will not need you in the future. Your patience in awaiting an assignment that may never come is appreciated. The requirements are likely to change in the future; we are unable to give any idea of when that will be." - Jerry Reimer, KK5CA, STX SEC

+ NORTHERN TEXAS SECTION RESPONSE

The NTX Section had been on alert since Monday, August 29. NTX SEC Harris Swan, K5MWC, and STX SEC Jerry Reimer, KK5CA, had agreed early on a plan to make effective use of NTX ARES members in response to requests from the affected area. That plan was to prepare a list of people volunteering to go if requested; Reimer would coordinate all requests for assistance.

NTX ARES has primarily been supporting the West Gulf ARES Emergency Net, dealing with H/W traffic, and supporting Red Cross, Salvation Army, and FEMA. Several of the county EOCs requested support as they anticipated operations with the large number of evacuees expected.

NTX will supplement resources in the affected area, provide support to local shelter operations and support relief agencies in response to their requests. The tempo will certainly pick up as time goes by; NTX ARES is planning for long-term needs. -- NTX SEC Harris Swan,

K5MWC

The following is culled from a status report by the indefatigable Jerry Reimer, KK5CA, South Texas SEC: Hurricane Katrina ARES operations continue in Louisiana, Alabama, Mississippi, North and South Texas sections, using operators recruited from Louisiana, Arkansas, Mississippi, Texas, Tennessee, Florida and other nearby states and sections.

+ LOUISIANA

ARES continues to support Red Cross shelter and Southern Baptist Convention debris-clearing operations in St. Tammany parish, where disaster relief workers are housed and fed at the First Baptist Church in Covington. In Washington Parish, ARES operators are arriving to provide critical communication among hospitals and the parish EOC. Over a dozen operators from Texas alone have traveled to Louisiana. Victoria County (Texas) ARES EC John Wagner, WA5VBP, flew into the New Orleans airport where it was determined that his assignment was unsafe; he was sent on to serve in Baton Rouge.

Communications among the field teams and the state EOC in Baton Rouge continues using HF voice on 75 meters and 40 meters. Surprisingly, many VHF and UHF repeaters remained operational after the storm's passing. Louisiana SEC Gary Stratton, K5GLS, temporarily delegated his authority to former SM Al Oubre, K5DPG. Stratton will be working on restoring the communications infrastructure.

In yesterday's ARRL Letter, Stratton was cited as saying Amateur Radio was the only means for state officials at the state EOC in Baton Rouge to communicate earlier this week with parishes above Lake Pontchartrain. Also, there was a communication to the EOC from FEMA that said, "Ham radio is our prime communications with you, and they should get anything they need."

Reports also have ARES ops even loaning government agencies their equipment.

+ MISSISSIPPI

The hardest hit areas are perhaps the counties closest to the Gulf coast, especially Hancock and Harrison Counties. ARES DEC Tom Hammack, W4WLF, requested 25 ARES operators for critical communication among EOCs, hospitals, and shelters. ARRL Northern Florida, West Central Florida and Southern Florida Sections are sending self-sufficient teams to meet this urgent need, and a few operators are coming from Arkansas. Hammack said his operators are sleeping on the floor where they are assigned. State RACES Officer and ARES DEC Ron Brown, AB5WF, is working on a staging area for Amateur Radio responders near the Mississippi Emergency Management Agency (MEMA) in Jackson. Mississippi SM/SEC Malcolm Keown, W5XX, received a replacement generator and now has telephone and Internet

service.

[In correspondence with Malcolm, he gave me an appreciation for their mental status and what they are going through on the ground in Mississippi: "At this point nobody has much time to document activities. Nobody at this point really has a clear enough mind to put together a coherent story." -- K1CE]

+ ALABAMA

The state capitol of Montgomery was the scene of processing and orienting Amateur Radio volunteers for Red Cross and other duty in Louisiana and Mississippi. Some volunteers will help support communication at Red Cross shelters set up for evacuees, while others will provide tactical communication for feeding stations or for emergency management. Alabama SM Greg Sarratt, W4OZK, has been coordinating ham radio volunteers at the Montgomery site. - ARRL Letter

+ SOUTH TEXAS

The Red Cross reports housing more than 142,000 people in 485 shelters in 18 states. Texas has over 230,000 people who fled. Orange County ARES EC Rocky Wilson, N5MTX, has ARES operators supporting seven Red Cross facilities that include distribution centers and shelters. Since being activated on August 27, 35 ARES operators have provided over 1,200 person-hours, as operations continue. ARES groups from adjacent Jefferson and Polk Counties are providing much-needed mutual aid.

ARES District 14 (Harris County) DEC Ken Mitchell, KD2KW, was requested by the county emergency management office (HCOEM) to provide four operators 24 hours per day, on-site at the Houston Astrodome, and two at the county EOC, beginning September 1. Since then, more than 90 operators have provided over 720 person-hours of direct communications support. All four county ARES ECs are providing operators at both sites.

Managing the incoming health and welfare inquiry messages is overwhelming nearly all NTS resources, especially at the local level. To mitigate this, Amateur Radio clubs have been asked to contact nearby shelters as often as possible to pick up outgoing messages and process them into the NTS by any available means.

At the request of the state Adjutant General's office, Travis County ARES EC Don Dudley, AC5YK, facilitated National Guard in Waco with communication with Guard elements at the Louisiana Superdome.

+ NEW ORLEANS

STX SEC Jerry Reimer, KK5CA, reports: "Amateur Radio operators are beginning to be sent into areas around New Orleans to support command and control operations for Red Cross and other disaster relief

operations. The equipment requirement is VHF and UHF FM. Portable, hand-held and mobile stations are needed. Conditions remain primitive. A pass is required from the Louisiana State Police for access beyond roadblocks. Similar requirements exist in Mississippi, where the state EOC is located in Jackson."

+ NORTHWEST HARRIS COUNTY (TEXAS) ARES

From Hal Merritt, KD5HWW, EC, Northwest Harris County (Texas) ARES: "I have a few moments to breathe and share some notes. We have three running missions: a deployment near Slidell, an operator in New Orleans, and the local event.

The local mission consists of serving the mass shelters in Houston. We saw rapid escalation, much more misinformation than information, and a dynamic situation. The core problem was one we've never seen before: We had trained and drilled on mass evacuations, but not the reverse (mass incoming evacuees). Our local resources were quickly overwhelmed, and I pulled the trigger on our MOU with surrounding county ARES groups. I am now tasking hams from several counties, but may be expanding my plea for operators statewide. The problem is that there is no lodging of any kind to be had. Every hotel and motel is completely full with evacuees.

There is ample local infrastructure, except housing. The event is running along the FEMA ICS (Incident Command System) and UC (Unified Command) scripts. It may seem like chaos to the untrained eye, but it is a thing of beauty to see it working so well.

Normally, an ARES response team would report to, and be tasked by, the Liaison person of the FEMA Command Staff. There, it might be used as an ICS resource or tasked to Logistics for assignment to Task Forces or Strike Teams. Amateur Radio is not yet an official FEMA Resource Type, but that is being worked on. In this event, the Harris County OEM called us. The EOC is attached to ICS under Logistics, and that is how we fit into this event. The ICS is on site at the Astrodome complex.

The ARES response has two locations. The first team is situated with the EOC, providing communication for logistics (resource scheduling and support of the Dome team). They are making entries into a master event log, also.

The main effort is in the field, however. We have teams of four to six operators. There is a Team Leader who is in charge. He/she is responsible for on-site task assignments and for getting the relief team quickly up to speed. The Team Leaders are ARES AECs, or other amateurs with large public service event experience.

We are running six-hour shifts. No one is scheduled for more than six hours, and they have only one shift per day. Having seen what happens when someone gets too tired, we would rather do without, than have someone get hurt; or worse, get other people hurt. Superheroes

need not apply.

The ARES leadership is focused on coordination. Every possible task is being delegated. Although we are working 12-hour days, the real action is with the Team Leaders and Net Controls. No, things are not being done exactly like we would have done it, but it is getting done; and generally, with the highest degree of professionalism. Every time I screw up, there seems to be a number of folks there to beat me up and get the job done right.

Please relay my deepest gratitude to all that have stepped up to the plate. - Contact Hal Merritt, KD5HWW, at <hal.merritt@worldnet.att.net>

+ HILLSBOROUGH (FLORIDA) OPS DEPLOYED TO MISSISSIPPI MAKING A DIFFERENCE FOR KATRINA SURVIVORS

Six trained communication volunteers from the Tampa Bay, Florida, area (sponsored by the Hillsborough County EOC) have been in Mississippi. Using ham radio while awaiting their deployment with state of Florida communications assets, they became one of the few outlets for "I'm Alive" messages out of the area. With local operators in the affected area providing communications to local police, fire, and search teams, there has been limited means of transmitting H/W messages from the victims to their families outside the disaster zone.

Members of the Hillsborough team have been visiting shelters and feeding stations collecting messages from victims. More than 100 messages have been transmitted from Gulfport to Tampa via the Tampa Amateur Radio Club, and local hams in Tampa have been making heart-breaking phone calls to loved ones across the country who had no word for a week on the fate of their family members in Mississippi.

The official mission of the Hillsborough team is to set up and operate EDICs (Emergency Deployable Interoperable Communications System), a fly-away computer-controlled communications system that interconnects radios and cell phones of different frequencies and types so that public service communication can be restored in a disaster area. It allows the radios that survived to be put to use so that police officers and firefighters can better coordinate recovery operations.

The EDICs unit may be tasked to Stennis Space Center in Hancock County, or to Keesler Air Force Base, Mississippi. The team is to deploy with Florida law enforcement teams staged in Gulfport. -- Pete Kemp, KZ1Z, West Central Florida Section PIO

Gary Sessums, KC5QCN, member of the Hillsborough team writes: "Thanks for the mention in the ARES newsletter about the Hillsborough County ARES/RACES deployment. We are on site in Biloxi and Gulfport, Mississippi. We have passed over 100 H/W messages in addition to our

public safety tasking. We are on the MARS, CAP, and SHARES nets, in addition to Amateur Radio. I am trying to arrange relief for the local ARES/RACES operators at the Harrison County EOC, as those guys have been running non-stop since before the storm hit."

+ INTEROPERABILITY TIP

Watching in frustration at the breakdown of communications in the Gulf coast response, I was made acutely aware of the viability of Amateur Radio in terms of interoperability. We have the ability to change frequencies in our radios to serve the location and needs of the area.

Mobile HF, VHF and UHF radios can be re-programmed on the fly. With that in mind, one of the necessary contents of anyone's "grab and go" equipment should be the manuals, or copies of specific pages, for any radio they carry with them.

I also write down the necessary steps -- and only the necessary steps -- to program and use the radio away from the manual. I word process the steps small enough so that I can laminate them as part of my credentials lanyard. As a backup, I put another credit-card-size laminated copy in a wallet that I keep separate in a coat pocket or in the cargo pocket of my trousers. -- Chuck Heron, KD7BWG, DEC, Gila County ARES, Arizona, Executive Officer, Gila County EMCOMM (ARES/RACES), <kd7bwg@arrl.net>

+ ON RESPONDER FATIGUE

From Fred Leif, W6WTI: Thank you for putting out the special edition ARES E-Letter. It is important that hams outside the impact and support areas have a sense of the service that is being provided so that we can help explain to our neighbors and the public the vital role that Amateur Radio is playing.

Amateur Radio serves best while the communications emergency exists. The full response and recovery from Katrina will take a very long time, but when the response agencies and recovery teams have established networks that meet their communications needs, the hams should be allowed to stand down. It will be difficult to determine when this occurs, but the ARES leaders should keep an eye on this ball. We don't want "responder fatigue" to the extent that we can't get operators for the next event. Bringing our service to bear on the communications emergency, and recognizing when it is time to step aside is a vital management function.

+ DIGITAL OUTLETS

Louisiana SEC Gary Stratton, K5GLS, reports "We now have digital (Pactor/Internet/WL2K) outlets for H/W traffic into the areas noted below in Louisiana and Mississippi. National Traffic System (NTS) traffic can be sent to <ae5v@winlink.org>. At the point that destination traffic handlers feel they can take on all comers, the

directions to reach them will be shared. Louisiana towns and parishes: St. Tammany, Abita Spring, Covington, Folsom, Lacombe, Madisonville, Mandeville, Pearl River, Son, Slidell, Tangipahoa, Amite, Hammond, Independence, Kentwood, Ponchatoula, Roseland, Tangipahoa, Ticfaw, Terrebonne, Houma, Washington, Angie, Bogalusa, Franklinton, Varnado. Mississippi Towns: Gautier, Ocean Springs, Pascagoula. - Relayed by Benson Scott, AE5V

+ BRIEFS:

The Ohio Single Side Band Net (OSSBN) was to announce that H/W traffic will be accepted. OSSBN Net Manager Connie Hamilton, N8IO, who is also an Assistant Section Manager, said conditions have changed, allowing for a reasonable chance of traffic getting delivered. -- Joe Phillips, K8QOE, Ohio Section Manager

+ HURRICANE KATRINA HF RESPONSE AND RECOVERY FREQUENCIES

The following frequencies and links are the courtesy of John Mayger, W4DJ. As far as net activity is concerned, I've been listening primarily to the Gulf Coast ARES Net on 7285 kHz, and the SATERN Net on 14.265 MHz, although I'm sure there are many other active nets. Good propagation to the Florida east coast from those two nets have allowed me to monitor their excellent, professional work. - K1CE

+ FINAL NOTE AND PREDICTION

This special edition is released on the anniversary of the September 11 bombings that changed all of our lives. As with the humanitarian ARES response, then, it has been a privilege to monitor the incredible ARES response to the current catastrophe. Bravo to you, the ARES field activists.

It was also inspiring to see Newington and other staff give up their holiday and other time to support the ARES effort. Bravo to them -- they are members of the HQ staff for all of the right reasons.

And now, the prediction: When the curtain is finally drawn on this calamity, you will see Amateur Radio and ARES written -- or re-written -- into a host of more governmental and non-governmental organization plans for the future. Guaranteed. Mark my words on that one. Get your pens ready. - K1CE

Yes they failed never said otherwise

> Then please comment about
> the use of Hams to DISPATCH Police and Fire.

I see no such reference, I see a reference that mean that but it is not
clear what type of car or HT radio. Had this been Sanagamon
County(springfield IL area) or here (houghton County) the police and

fire systems can operate autonomouslys of the 800 MHZ system not as
well

> Not to mention the comment of
> how these same hams helped FIX these sites to attempt getting the Police and
> other Emergency agencies back on line.

Nice to see them lend a hand but of course this isn't passing a
message, and here at least many of hams able to fix such system are
also the poeple that installed them in the first place
>
> Please also note that these Ham teams VOLUNTARILY PUT THEMSELVES into the

Never said otherwise

A few years back a Ham with a callsign like --4CNN (all I can recall)
was selling on e-bay some sections of four leg straight tower that was
used for FAA installations. The sections included a ladder.

1. Can anyone recall who was selling these?

2. Can anyone ID the make of the tower?

I am looking for about about 30 feet.

Thanks

Hi,

I'd like to get a small, portable HT type radio for my wife (a non HAM) in case phones, etc., fail. What can you recommend? It should be small enough to carry daily, but get an honest 2-3 mile range (depending on terrain).
We've tried several of the FSR type radios, but none get anywhere near the advertised range. Any suggestions?

Please email to wheagy@SPAMgmailSPAM.com (remove SPAM)

Thanks,

Win

Huh?

People survived without having constant communication for eons. Now
suddenly a cellphone isn't good enough, people need backup?

Yes, emergencies will happen, but people your desire for a backup of
a cellphone is just way down the curve.

First you need an emergency, then you need the cellphones to fail,
then you need a need to communcate.

One thing missing from your post is what is she supposed to do with
this radio? You need someone at the other end, so are you saying
you'll always be that close to her so the two of you can talk? Or
are you hoping that she can call some random person to come and help (which
may or may not happen?)?

Hallo smart guys....

Yeah.... .I have a problem.... I would like use my old (but still working)
TV SONY-KV 1370R for some Ham experiment,. but this devil drive
me crazy.... I can't figure out how to add more channel... some channel
are blocked (kids reason ???)... the " + " button is not working as should
be.
Maybe I have to press more buttons... but " - " minus channel - button
is working properly.. and I already lost few channel without recovery....

My dears do you have any help ideas..?

Carlos

I think I would look at an MURS radio. They run two watts in the
150-160 Mhz range, and do not require a license. Recognize though,
that even with a 5-watt radio, you cannot be assured of 2-3 mile
range. We used 5-watt GMRS radios in our CERT organization, which was
only intended to cover our housing development from one end to
another. It's a little over a mile, but coverage was often spotty at
best. You are probably looking for something that doesn't exist. To
get reliable coverage over a 3-mile distance usually requires a
repeater, and that's a whole different ball game. Ever thought about
getting her a ham license? It's not that difficult now.

Date: 2005-09-12 17:17:53 UTC
From: wmtell@gmail.com
Message-ID: <1126545473.532986.157680@z14g2000cwz.googlegroups.com>
Source record: 13614

I have listed a NEW SGC SG-230 SmartTuner on ebay. As you most likely know, this is the ultimate automatic antenna tuner.

This is a commerical grade, state of the art antenna tuner for Ham, commercial, marine, aviation, military, intelligence and shortwave use.

For more information or to see the pictures click on this link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=6802005559

If the linik does not work for you, just go to http://ebay.com and do a search for: "SGC model SG-230"

I have the ability to ship this unit worldwide.

Thanks,

Bill

4242. FS: Radio's, mics, meters, etc.

Have the following FS. All the equipment is fully operational w/
paperwork unless specified, shipping is included in the prices:

Rigs:
- Yaesu FT-890AT..... Works great, looks fine. $475
- Kenwood TS-50..... Never mobile, w/ box and all accesories $450
- Icom 706MKIIG..... Also never mobile, w/ all from factory $600
- Icom IC-2800... 2m/440 like new, a scrath or two on heatsink $375
- Yaesu VX-6R.... tri-band HT, 2 months old $195
Meters:
-Bird 43 - Very clean w/ box papers etc. $175
-MFJ 934 300W TUNER - $225
-MFJ 962d 1500W TUNER - $145
Amps:
-Dentron MLA 2500 amplifier - some wear-n-tear, new tubes $350
-Heathkit SB-220 2kW AMP $440
Mics (will wire to your preference @ no charge):
-Astatic 10 DA - NIB - $115
-Astatic D104 - lightly used, looks new $80
-Heil HM-10 - Used once, Wired for Icom $85
Keys:
-MFJ 464 Memory Keyer - like new $150

Thanks, homebruelectronics@yahoo.com

Ok...I guess more details are needed She works in Washington DC, I work a
few miles away. As you may know, over the past few years, DC has been,
shall we say, an area of interest with regard to emergencies. As we also
know,
from 4 years ago, cell phones were no help during the emergency. We have
text messaging, but that cannot necessarily be counted on either.

So, my original post still stands, but to be more specific, I'm talking
about
9/11 type emergencies. I'd like to have a backup communications method
when our familiar methods fail. I realize no communication method is
failsafe, but I just wanted to see if someone had any insight I may not have
considered. If you don't, know problem...thanks anyway.

Win

I looked at the link and read a couple of the articles. I didn't see anything that warranted labelling them bigots. I don't think that the HOA took the proper position, but that doesn't make them bigots.

4245. Re: Emergency HT for non HAM?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-09-12 19:27:29 UTC
From: Steven L Umbach <n9rou@n0-spam-for-me-comcast.net>
Message-ID: <CJOdnYdzos0hS7jeRVn-hw@comcast.com>
Source record: 13618

All the two way communication devices I have seen give ranges that are at best optimistic and then at only best possible conditions. The more power the device has [all else being equal] the better your range though going from 1 watt to 2 watts will not come close to doubling your range. I would also look at devices that have multiple power levels because you want to conserve power when you do not need full output. Having backup devices is always better then nothing. Keep in mind that the type of communications these devices use is "line of sight". If there is a hill between the two of you range will be poor. If one person is much higher than the other and the path is relatively clear the range can be very good. I have a modest vertical antenna on top of my house at 35 feet above the ground for 146 mhz and with it my range is over ten miles to other users on the ground and up to about 50 miles for users with similar antenna set up. Directional "beam" antennas can extend range dramatically [well over 100 miles] to other beam antennas pointed at each other. With the built in antenna for my HT about a mile is good for HT to HT communications at ground level.

So if you need to use a HT device try to get as high and in the clear as possible or consider an outside antenna. I don't know if they make external antenna devices for the consumer devices though one could be easily built if need be. Even one in the attic of a house could extend the range quite a bit. Otherwise consider getting your ham license. You do not need to learn Morse code for the entrance license and the exam is fairly easy with books that have the questions and answers. With a ham license you could then also purchase higher powered FM mobile devices for your cars. Event without a repeater with car to car using 50 watts FM your range should be at least a couple miles due to the combination of higher power and a much better antenna that would be used on the car. A car mobile possibly would also be able to communicate with a HT on the ground within the range you need. A new FM mobile radio can be purchased for well under $200 and there are economical mag mount antennas that can be stored in the trunk until needed. These antennas can be as little as a foot high. Good luck. --- Steve

http://www.universal-radio.com/catalog/fm_txvrs/2800.html --- Yaesu FT 2800M. 65 watts on 2 meters for $159.95.

I know this is herasy in this group, but you might want to consider getting
her a CB. It's cheap, it's easy to use and there are a lot of them around.

You might not be able to reach each other directly, but there is a good
chance that there will be someone around who can relay a message for you.

Geoff.

Should also mention that you need the batteries in the thing to be
charged. And you need to have it on you. Lugging around an extra pound
of useless radio day after day after day is gonna get old, so It'll
soon be on the shelf at home.

And the same thing will happen with your end.

And why do people think they need to communicate so urgently? She's
either OK or probably in no shape to use the radio. Unless you're
a medic or have her rare blood type, it can wait. It'll either be OK
or it won't. Knowing about it sooner won't change it.

Most people don't even NEED a cellphone. Just gives them something do
do so they don't have to pay attention to that boring driving to the

place they don't need to go in their SUV they use for hauling two bags
of groceries.
Just my opinion.

They finally backed down today, after a change in the HOA and a
number of residents calling realtors to see if they could find another
home to move out of Majestic Oaks.

BTW, the same HOA tried to evict a resident after 9/11 for having the
nerve to display the American flag in one of their windows. The local
paper had printed a full page American flag on heavy paper stock and
asked people to display them in their homes.

Oddly enough, nobody suggested having her earn her Amateur Radio
ticket and getting a 2-meter handheld!

My wife did it with three days of studying. To this day she retains
maybe 2% of the testing material, but at least she remembered it long
enough to get her ticket - and that was when you had to take TWO
written tests for Tech!

I want to ask how can we get 110V and 220V in our homes in Saudi Arabia

Or in other words
what is the wires that inters our home ????
I heared in this group about 120 and 0 and -120 and, but these are DC
and we get AC in our home and according to my knolage in AC we dont
have negative or positive because this is an altranating current .
PLEASE ANSWER ME WITH A CLEARE EXPLANATION
THANK YOU.....

In the U.S. the power system is 120 volts 60Hz. To improve efficency most homes are powered by transformers that have a 240 volt output with a grounded center tap. So two wires come into the house with 240 volts across them, while the outlets are wired with one side connected to a "hot" wire and the other connected to ground at a central location.

Some applicances such as ovens, clothes dryers, large air conditioners, heaters, etc are wired across both wires and run on 240 volts.

In Saudi Arabia things are different. The power coming in used the European standard of 220 volts 50 Hz. Most countries are migrating to a 230 volt standard that the E.U. is using (a compromise between England's 240 volts and Europe's 220 volts).

What I don't know is if Saudi Arabia uses the traditional two hot wires with no reference to ground, or it uses one hot and one neutral (central ground) like other places.

Most likely, if you want 120 volts 50Hz, you can buy a transformer. There are two kinds, an autotransformer (one winding with a center tap) that has poor regulation, but is much cheaper and a true transformer that has two windings. For electronic equipment, a true transformer is better.

If you want to run a refrigerator, a transformer with a 100 volt output is better because the motor is less efficent with the 50Hz current and the lower voltage prevents it from stressing itself.

Note that the are some rare devices (mostly made before 1990) that are sensative to the frequency of the incoming electricity. These are things like clocks, hifi equipment,VCRs etc. They will not function properly with a transformer.

Note that TV systems are different and you will not be able to use a 120 volt (U.S.) TV set no matter what you do to watch local TV. There are "multisystem" TV sets and VCRs, but they are all dual voltage, check for a switch.

DVD's are a different story.

Since this is a ham radio group after all, if you are asking about ham radio equipment you would, IMHO, be best off buying equipment that runs on 13.8 volts (also known as 12 volts) and getting a proper power supply locally.

Geoff.

Voltages in Saudi Arabia are nominally the same as on the North American continent. This is to say, 127 volts for most appliances, 220 volts for heavy appliances. Both at 60 Hz line frequency. They use the same appliance plugs as N. America for their 127 volt service, and the Euro round two-pin plug for 220, as well as a larger plug for heavier appliances that has two flat horizontal pins and a round pin for ground or neutral.

Judgments!!! Would it not be better to read the exact terms of the CC&R,
AKA CONTRACT, before judgments are made??

The exact wording of the HOA/CC&R may restrict certain activities [such
as external antennas, or temporary housing, etc]. The restriction can
only be waived by consent of the members of the HOA.

Wnen u say depending on terrain, that is the kicker. Too many variables
without actually getting and testing FRS, CB, MURS, or GMRS, so I would
recommend a Ham license. Here in San Diego we have 100+ repeaters most of
which can operate on emergency power and cover 2500 square miles of the
county and a 100+ mile range.

The Technician test is easy and no code and one can take it over again til
they pass. Kids from age 8 and up and folks with no technical background do
it all the time.

Small Ham handheld radiis will do the trick and are great for travelling as
well. The used ones go for as cheap as $25 each

For Personal Radio services -- see URL:

It is exactly that type of over zealous HOA that made me tell my Realtor, "Do not shot me a house with any HOA!" On our first trip out , the first house she showed me had an HOA. I told her, "If you do that again, you are fired" She looked shocked and said, "It's only $50/month." And I replied, "It has nothing at all to do with money..."

Of course, now I have a house across the street with no less than 8 cars in the driveway and street. So much for single-family-home. But, we all get along.

Carl

.....And you can use any 5 watt Handy to reach each other via the many repeaters in the area. Ask your wife to go to www.qrz.com and take the Tech exams over and over til she gets passing scores then find a volunteer examiner session and get her license. This is not cheating - most of the test is on rules that must be learned by rote anyway and this is a good way to do it. If this piques her interest she can go on from there. My wife was a secretary with no technical background. Today she's an "extra" making more than I in a good technical job. Good luck ....

Without wanting to start a political discussion while you have been relativly ignored by terrorists, a situation that unfortunately will not continue, we here in Israel have not. Every time there is a terrorist attack every one calls all of their family and friends and asks if they are ok.

Even if there is no chance of them being in the attack itself, everyone worries that this was the one day that their loved one went to the place it happened.

We have 3 1/2 cell phone carriers here, one runs a mixed AMPS CDMA network, one runs a D-AMPS (800mHz) and GSM 1800 mHz network and one runs a 900/1800 mHz network. The half is really a trunked radio service (MIRS) masquerading as a cell phone network.

The landline network becomes clogged beyond useage after a few minutes, the CDMA network crashes, and the other two become full, but eventualy you can get through.

Ham radio still works.

Of course in absolute size, the attack on us are small, usually one or two single bombers or car bombs. It is important to note that the 9/11 attacks cut electrical power, telephone service, cell phone service and ham radio repeaters.

However, we switched to GSM cell phones (the 900/1800 network) about 5 years ago because the cost of calling each other in our family was $.01 a minute. The HT's sit in a drawer. I still keep the batteries charged in the ones that can hold a charge and will rebuild the old ones RSN (real soon now).

As for land lines, we still keep ours, but for outgoing calls we switched to a VoIP service from the TV cable company (not an internet service) that costs about $15 a month with 2000 minutes of calls to regular landlines and other cable phones. The regular land line costs about twice that for the "line" with no free minutes.

I would like to note that while you saw the last several wars with Iraq on CNN, we had to seal ourselves in chemical weapon proof rooms and were asked by Presidents Bush to stay out of it. We also had to send our children

to school carrying gas masks.

Learn from what we did, it may happen to you. Be prepared to evacuate
and communicate when everything you think is normal stops working.
It's not just terror attacks that can happen, train wrecks, industrial
accidents and of course storms can affect you.

How many of you have heard the name Mel Tappan? Ok you both can put down
your hands. :-) He was the "guru" of the survivalist movement, the sincere
people who wanted to survive a nucelar war with the Soviet Union, not
the nuts that bombed the Murrah Building. He moved to the woods of Montanna.
Unfortunately he was on kidney dialysis. He was snowed in by a storm and
did not survive.

Maybe if he had another way of communitcating he'd be alive today.

Geoff.

I chose an older neighborhood, and, like you, I refused to accept any HOA bullcrap. I simply will NOT tolerate any old blue-haired busybody telling what I can or cannot do on my own property! IOW, yer rights end at that property line, and if you don't like what I do then come over here and *make* me do something about it--all 6 feet, 230 lbs of me!!! :) Now to clarify something, all my neighbors are nice people who keep their homes and property looking decent. If there are 2-3-4--or 7 cars over there, it ain't none of my business! So we have no problems. (and I get to put up as many ham antennas I want to!)

Jerry

That's just it! There ain't gonna BE any HOA's ,covenants, or busybody
neighbors telling me to do a durned thing unless they got enough rear end on
'em to MAKE me! If today, somebody wanted to start an HOA in my
neighborhood, I'd tell them to kiss my (censored).

I feel VERY strongly about property rights, and if I want to put up an
American flag, then I'll put up an American flag and I dare some schweinhund
to come over here and touch it! I DESPISE and detest HOA's! :(

Gerry, you said it correctly. Tell your agent "I will not consider, under any conditions, any HOAs or CC&Rs." If the RE attorney uncovers any 'hidden' CC&Rs in the title search, the sale is OFF!

I live in the "Live Free or Die" state [New Hampshire]. When I bought here three years ago I made that point to our realtor. We bought a very nice single family home of 2100 square feet on a 1/2 acre only 21 years old, 6 miles south of the state capital and 12 miles north of the third largest city.

I checked town zoning requirements for a tower. I'm allowed 70 feet for the tower without requesting a variance. Also, if the tower is professionally installed I need not consult the town building inspector. Heights from 70 feet 1 inch to 200 feet require plan approval by the building inspector ONLY for safety issues. BTW: my tower is only 50 feet [I live on top of a 510 foot hill with height above average terrain of 250 feet for 5 miles radius].

But back to the original issue. The HOA may have a strict rule on temporary housing. It is a freely entered into contract condition that requires the consent of the contracting parties to amend.

So, the term 'BIGOT' is a prejudicial pre judgment.

Often at considerable personal risk....

A guy who is a radio-tower contractor (like cell sites, microwave towers,
commercial radio stations, etc.) sent this.

We got the call on Sunday afternoon. I expected
it, of course. After 18 years of doing this I can always sense when
the call is about to come. We gathered supplies on Monday and got
out the tents, Coleman fuel, cook stove, lanterns and bedrolls. Becky
graciously went to the store for our provisions, then to the bank for
cash, and by dark we had all in order.

We went by to see the customer on Tuesday morning to equip ourselves
with radios, site maps, and lists of those that we would be reporting
to. As we departed on Tuesday mid day I knew that this would be
another great adventure. All was good through Pine Bluff and Lake
Village, Arkansas. Greenville, Mississippi was even tolerable. By the
time we got to Yazoo City, however, things had changed. No ATM's, no
gas, no ice. I knew we were in trouble when the lines at the check
cashing places were longer than those at the banks. We had half a
tank. I had stopped in Dumas and bought 12 half pints of whiskey
knowing that with such legal tender a full tank could be mine
whenever I wished. We pressed on.

We arrived in Jackson to the sight of long lines at the gas stations
and grocery stores with crowds gathered outside. How wonderful it
felt to have the secure gates of the Entergy compound locked behind
us. There was little electricity and no hotel rooms. We readied the
camping supplies and checked the map for a good state park. A little
fuel from the Gods at Entergy and we were on our way. We found a
decent park (no electricity, of course) and pitched camp. Dinner was
chicken helper, mashed potatoes and tea. It began to rain but
thankfully we had brought a huge roll of Visqueen. A large tent was
erected above our sleeping bags and in no time Wednesday morning

found us nursing our mosquito bites and eating oatmeal. After that it was off for a day in the air.

I should mention at this point that I brought my stellar lead man, Paul Fitler. Paul spends too much time in jail, too much time in the sauce, and too much time attending to women that can't take care of themselves. He is constantly deep in debt and out of a place to live, and good transportation. He is also the best, and highest paid towerdog in the state. An average week for him is $1000.00 gross. He'll easily double that during his tenure here. In fact, I'd imagine that he may have a $2500.00 week before it's all over. He has worked for me over eight years. He can't last working for anyone else more than ten days.

We take off Wednesday in a search for fuel, ice, and towers on our maps and find all of them. It is another long hard, hot day. We are constantly greeted with bewildered folks looking at trees impaled in their roofs, cars mangled and electric lines in their yards. We have Entergy signs on the side of the van at this point and when they see those signs their looks are heart wrenching and desperate. We look back with sympathy. They do not understand. They want us to have the answer. They want us to make it all better. They want relief which we cannot give. We give 100% that day and many communications tower sites come back to life. We see the line trucks begin to roll as we leave town. We are glad to have played a part in this process.

Thursday finds us in the office. The telecom crew is going ballistic. There are people everywhere barking out orders. So and so needs 19 phones installed at the office in Hattiesburg , the computers are down at thus and so, the radio system has died at Tylertown and the line crews can't work. The locals see the trucks sitting idle and they are getting angry. The locals don't understand that the line crews can't work unless they know for sure that lines are not energized.

The line crews can't be assured of that unless they have good communications. They can't have good communications unless the telecom guys do their jobs and in turn, unless we get the antennae fixed. So the locals are mad. Mad as Hell.

We listen to all of the banter going back and fourth and suddenly someone is shoving a piece of paper in my face and screaming loudly... Generating station (power plant) South of New Orleans . it's off line... no output... city is dark enough as it is... something has to be done. they need a 20 KW generator ASAP in order to have lights so they can get the plant back in service. Someone has to go. It is a war zone down there. The plant must come back to life... And then the inevitable question: "Will you go?" It echoes in my mind... Will I go? Will I? Can we take that chance? I smile. Actually, I grin. Yeah. I'll go. I give them the inevitable response to their inevitable question. "You bet your sweet ass I'll go... Press hard pal, Five copies"!!!

We top off the tank, load the shotgun, holster the pistols and hit the road. This is going to be a trip to remember. As we head out there are few cars on the road. No gas. The traffic is minimal and we set the cruise on 60 so as to conserve gas. Getting there will be easy. Getting back will not be as assured. I know, however, that we have enough gas to get to the plant and at least back to the Mississippi/Louisiana state line. I've got food, ammo, tents and lots of water. If I get stranded I'll be ok. We drive along saying little. We know that one wrong turn or wrong word at the wrong time to the wrong person could change things real quick.

With the Entergy signs on the truck we glide through every roadblock with ease. Cops don't ask for our ID or license. They don't search us. They really don't even look at us. We are riding on a magic carpet. No one will mess with us. They can see what we have in tow. Ah yes. The generator. The magic elixir that everyone wants. Generators make oxygen systems work; they bring food refrigeration units back to life; they bring light to the darkness, life to the newborns at the hospital. We have the generator. We are the stewards of all that the citizens hold sacred at the moment. We are the golden boys. They smile us and we smile back.

We get onto I-310 and then onto US 90 headed for the plant and suddenly our swollen heads and large egos begin to shrink. We are greeted by bands of wandering blacks about 15 to 20 in number. Every store front is destroyed. Some buildings are burned. All of the glass is gone from every window. We do a quick mental calculation as to wind direction during the storm. We realize quickly that many of the broken windows are on the downwind side. We see the crowds... it all makes sense then.

We get to the end of US 90 and make our turn towards the plant. We are confronted by a policeman in full riot gear. The intersection is desolate save for him. An industrial wasteland with this one shred of order standing in the road. He reminds me of some cavalryman in Oklahoma in the early 1800's or some sheriff in a town of lawless criminals. He looks over our cargo curiously and gives us a halting look, letting us know that "Entergy trucks have been taking fire in this area. I suggest you remove or cover your decals".
We see the plant up ahead. The sign of the guard lowering his shotgun is a welcome one. We make our delivery and point our truck for Jackson.

The men at the plant we visit with are worried. They don't want to risk the ride home. Some have wives and kids they must attend to. They have no choice. The others opt to sleep in their trucks to avoid venturing from the perceived safety of the 12 gauge in the hands of the guard.

I envy neither of them. Either choice is dangerous. The gangs in the streets are hungry, thirsty and angry. Neither the guard nor the men on the way home are any match for them. The gangs know it and the men know it. For the first time I understand the delicate balance between

prison guards and their charges. The criminals really do have the upper hand at some moments. Everyone just allows the perceptions to be different than that.

As we head home among fallen timbers, power lines and buildings we come across a group of cops with side arms drawn and pointed at a group of men. On the ground are 15 or 20 individuals cuffed and laying on their faces. There are 9 or 10 cops and only 5 or 6 in the crowd, save those on the ground, so we figure the cops are winning and we punch it and move on. Every store has the front doors kicked in. One shopkeeper had the brilliant idea of putting his coke machines in front of the doors to prevent entry. The thugs were offended and responded by putting a truck through the windows. After they finished their shopping they left their calling card by way of a Molotov cocktail. How quaint.

I thought we were going to burn a hole in the gas gauge on the way home with our eyes. We calculated and recalculated. Every road sign showing mileage to the next map point was checked and rechecked. We were always cognizant of the five gallon can in the back. The fumes it emanated were like sweet perfume to our olfactories. That was the sweet smell of a soft landing. We knew that we could make it back. We felt good about that.

I thought of the B-29 pilots flying missions over Japan in 1944. Their calculations were much harder and there was much more at stake. I wondered what it was like for them when they ran the numbers and the result was death. What were those last hours like? What did they say to one another? I said a prayer for their souls and paid my respects. Real men. Let me never forget that.

My air mattress coupled with the floor of the Entergy Radio shop at Jackson, MS was a welcome relief. I looked forward to a good night's sleep only to be haunted by the looks of those on the streets. Why them and not me? I guess I'll always ask that. I always have. Why am I even here? What drives me to do these crazy things? Why would I put my best lead man along with the father of my children in harm's way? I don't know the answers to those questions. Frankly, I don't really care about the answers. I'm just glad to be safe and alive tonight. I feel bad for those that are without homes and families tonight and wish I could do something to take away their pain.

I think when it is all over I may go back down to that stretch of Highway 90 where the shops were burned. I think I may go back there and meet with the owners. Yeah. That's what I'll do. I'll meet with them. All that they have worked for was taken away from them by one violent act of nature and many lewd acts of men. I'll go meet with those men and women and engage in commerce with them as I can. And when I do. I'll tell them that I understand. Because I do. And they will know that I do. And in the end. I will know that everything will be OK. And they will know that too.

> 240 volts and Europe's 220 volts).

I was partialy correct. :-)

Saudi Arabia has both 120v 60Hz systems that use U.S. type plugs and 240v
(stated on one web site as 60Hz) systems that use in some places German
("Shucko") and in other places U.K. plugs.

Nothing stops them from calling an immediate emergency meeting to address
temporarily suspending such limits in times of great need.

And in times of major emergencies if they are not willing to call for a vote
and temporarily set such aside, then I would consider them not only bigots
but cold hearted. HOAs can VOTE for such measures.

If a ham can only use their station "in times of great need" it's unlikely
they'd have the equipment to put into service, so it's all a moot point.

I was talking about temporarily taking in those left homeless and how it shows a lack of humanitarianism.

The equipment thing is an entirely separate issue that needs addressed one way or another as it cannot be left to the last minute as you point out.

O I C.

I have no HOA restrictions, but if I did have some like that, then they'd just
be friends visiting for a few weeks.

4283. How to weather-seal an upside down Tailtwister rotor?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-09-13 23:27:20 UTC
From: Marshall Goldblatt <w4emb@myacc.net>
Message-ID: <3op5feF73ibjU1@individual.net>

Hello all,

I have a Tailtwister (TX-2) rotor mounted on a Rohn 25 foldover tower. While the tower itself appears to have survived intact, hurricane Katrina snapped the mast and destroyed the antennas. I need to fold the tower over to work in it, and likely leave it folded over for a fairly extended period. This will leave the top of the tower and the rotor upside down. Unfortunately, it is still the rainy season here, and the last time I needed to do this, rain water got into the rotor and settled in the bell, causing rust and other corrosion damage inside the rotor, because it is only weather protected when it is upright. I would like to seal the rotor to prevent this from happening again, but none of the ideas I've had so far (wrapping it in plastic garbage bags, using duct tape, using sealing foam) are usable, either because they don't seal well enough to keep water out or because stuff may get up inside the rotor where I can't get it out.

So, does anyone have any suggestions?

73, Marshall - W4EMB

Maybe ... get some axle grease, or RTV sealant would be better, perhaps.
Both should peal off reasonable well.

One other thing I am concerned with tho. I always heard that the rotar
must be kept in a vertical position or the grease would drain out of the
bearings? Wives tale ??? I don't know. But I always keep mine vertical
when stored.

As someone who lives near Ocala and has to visit a lot of these gated communities run by HOAs, I find most of them to be jerks who are only interested in holding onto their perceived power at any cost. The fact that it hurts others doesn't matter to them. Another HOA in the area told a retired couple move out, or send their 17 year old grand daughter away after she lost both of her parents in an accident. She had a few months till she was to graduate from high school and no other relatives but it didn't matter to the HOA. People like that are scum, no matter how expensive their home, or what they drive.

Its just too damn bad you can't tar and feather them and then run them out of town, like the good old days! ;-)

One of the tricks I learnt early on with RTV sealant in medical ultrasound water tanks is if you wet the surfaces with water and a detergent wetting agent the sealant wont actually adhere to the prewetted surface. Kind of handy if you wanted to force the sealant into a clearance slot and remove it later.

Or was it oil? Damn I cant remember! I know kerosene is used to pre the surface for better adhesion...

How about paper/masking tape over the gaps and spraying with that gluggy sealant you use on sink drains?

Probably not very useful thoughts, sorry!

Cheers Bob W5/VK2YQA

Don't know about that, but there's no way to keep the rotor vertical
when lowering a foldover tower... In any case, it's been folded over
(for long periods) many times, and I've never noticed a bearing problem.

First off, there are at least two rotor repair vendors whom you should
contact for ideas; Craig's and RotorDoc (I think those are the
names--a web search should yield results).

Secondly, with some experience with HAM type rotors I would suggest
that the two principle entries for moisture are at the cable
attachment point (either a terminal strip or an Amphenol connector,
depending on vintage or whether you modified it), and the space
between the fixed portion of the rotor (the part with the cable
attachment) and the black rotating part.

The cable attachment point will be trickier, but you may be able to
get good results with gobs of plumber's putty. What you want to avoid,
particularly if you have a terminal strip, is glopping it up with
silicone sealant or Coax-Seal. You will rue the day you ever tried
either if you use it on a terminal strip. The spaces around the
attachment into the non-rotating part need to be sealed, too.

You might also have success with plumber's putty at the opening
between the moving and non-moving parts. Just roll it up and stuff it
in.

I would follow that up with some sort of shroud. The garbage bag/duct
tape method you mentioned seems like a really good idea. I would have
been inclined to think it sufficient without any extra caulking. Don't

be concerned about "stuff [that] may get up inside the rotor where I can't get it out." See below.

As far as Dan's warning about the grease, I think he's right about the "old-wive's tale." The rotator turns at 1 RPM. Even if the grease did run out of the races (there are two in the T2X), you can certainly run the rotator at least a limited amount of time without concern until you get to it, not to mention that fact that there will be a film of it that will stay on regardless of position.

What many people ignore is the instruction right in the manual regarding grease, and it calls for very little. It's not a wheel bearing. Since you're almost certainly going to want to take it apart for a cleanup after all of your other repairs are completed, you can take care of any missing grease (and "stuff") then.

There are two kinds of hams: those who have had bearings on the floor and those who have never taken apart a HAM style rotor. But, even if you don't get 'em all back in, you'll be okay. When you talk to one or the other of the rotor repair guys, order a pack of extra balls. You'll need 'em sooner or later anyway. Think of the fun you'll have telling people you ordered extra balls.

Here's a tip: the bearings are held in a plastic carrier. Whatever you do, when you lift the carrier out, do NOT attempt to straighten the carrier into any bigger diameter than the race it rests in. In fact, keep the ends of the carrier overlapped. That is the secret to keeping the bearings off the floor. It's not foolproof, but it'll certainly reduce your adventure significantly. I can't tell you how many rotor invasions I had to perform to learn that.

I hope your Rohn 25 isn't one of the ones that folds over halfway up with a significant boom to crank it over. Those things are killers. I had a friend in Oswego, IL, who broke his arm when repairing his after it went over during the Plainfield tornado. The kit for 45 is MUCH stronger.

Good luck on all of your recovery.

Seems to me a large percentage of the blame lies with the
buyers who readily agree to such irrational HOA terms and
then complain about them later.

Sounds to me, an electrical power engineer, that they are using a
three-phase 220V (nominal) secondary distribution, with 127 V
provided by phase-to-neutral and 220 V provided by phase-to-phase.
The neutral is not derived from a center-tap on the phase-to-phase
secondary (which is really single-phase if only two phase leads are
provided) but is "carried through" from a three-phase wye
arrangement.

Although this is fairly common in US commercial d industrial
occupancies (277/480V is more common) where the lower voltage is
used for lighting and the higher voltage used for machinery, it is
not permitted in the US for residential occupancies, and IIRC there
are severe circulating third-harmonic current problems if the
secondary is a delta rather than a wye.

This is entirely different from a single-phase 220V center-tap
secondary distribution which is standard in North America.

I am actually quite peaceable and believe in living and letting live in most
cases. Who I allow in my home is up to me and whom I refuse entry is not
the purvey of HOA Nazis. And, again, it is why I chose an older home
(1956) with plenty of room, almost ZERO crime, and NO
HOA's. Now should I run into one of those SOB's that start telling me what I
can or can't do, then it will become another story. I feel so strongly
about property rights that I would go to WAR over it, both nationally...or
on a personal basis. Like, I wouldn't be averse to whuppin' some
smartmouth's you-know-what over it. Again, being very quiet and peaceable as
I certainly am, I am also quite intimidating in stature, so it would be an
interesting fight! LOL! Now, it *could* even get down to the point of
"You SOB, you can tell me what to do when you get around on the backside of
my shotgun, or you got enough
a$$ on ya to MAKE me, you *&^%$#"! LMAO!

In Charlotte, NC, this year, there was a case where the HOA Nazis and their
powermongers went too far with "foreclosures" and the NC legislature put
some restrictions on their ability to foreclose with respect to their
"rules".

Now, foreclosing on someone's house because some Nazi b#####d didn't LIKE the peoples' guests? NOT!
(Not me because I don't HAVE that problem) I can see how this could cause somebody to get severely injured or KILLED! You don't MESS with one's home! :(I feel for those who have to put up with such nonsense! OTH, one should NEVER move into such a place, either, so he bears some of the blame. :)

Best to all,

Jerry

That's why it is important to READ the CC&R's before you move into a
housing development with an HOA. If you have read them, and move in
anyway, you have no one to complain to except yourself. One good way
to temper what you refer to as HOA Nazis is to become a board member
yourself and do something about it. Having been an HOA board member,
I was disgusted with all the constant complainers at the meetings, but
not one of them was willing to lift a finger to help. Some people
apparently were just born to complain. HOA's can serve a useful
function, unless you are the type that enjoys living on a street with
dozens of junk cars that don't run, and weeds 4-feet high. People
agree to have HOA's so they can have a reasonably nice area in which

to live and raise their children. The protection of property values is a prime consideration. No one forces someone to live in an area with a HOA. From what I have seen, in several cities, most are not as restrictive as those given in these examples.

It's all very well to tell people not to buy houses with CC&Rs and HOAs,
but probably anything recent (last 20 years or so) has them. I've read
that the financial institutions that fund the developments insist on
them; they may not dictate every detail, but I think there are "model
rules" around that the developers copy, and these rules just about
require an application in triplicate 3 months in advance before you can
get permission to sneeze.

CC&R's are very common today, but HOA's are far less common.
Typically, if you buy in a development by one or several builders, the
builders will create CC&R's (copied usually as you stated) primarily
to protect themselves. They don't want someone trashing the
neighborhood while they are attempting to sell new homes. It's still
very possible to buy land outside the cities where you can have a
custom home built without CC&R's. I have read CC&R's ad nauseam and
most of them are very reasonable in their requirements. In our area,
they deal primarily with things like property line setbacks, minimum
square footage, overall height, height of fences, minimum landscaping,
junk cars, etc. All things that most people would like to see some
degree of control over to protect the value of their property. If you
don't have an HOA, you are forced to sue someone to enforce the
CC&R's. Even with an HOA sometimes that becomes necessary, but then
the legal fees come out of the funds of the association, and not
directly out of your pocket.

Plenty of RF transistors and fets that work on 50Vdc.
I have even seen modern rf powerfets in end-stages
operating at 300V lately!

You will need to turn your battery charger into a stabilised supply though.

Probably the best test is to determine how much money the HOA is collecting. If they collect $100 per home for road maintenance, there is little chance that they will accumulate a pot of money to hire lawyers over a small infraction.On the other hand, if the neighborhood is full of lawyers, or is collecting $1200 year per home for "general maintenance" - watch out!

I found a neighborhood where the CC&R's essentially had a loophole whereby if you built something that was not approved by the architectural control committee (ACC) , and the ACC did not take action (injunction) for 30 days, it was grandfathered. In other words, get it built fast and keep a low profile for 30 days.

Finally, if you buy a 2 acre wooded lot, chances are nobody will see what you are doing and will leave you alone.

While I would agree with officious and petty, moron and bigot do not apply
from my readings.

I get really tired of that old saw being hauled out and applied to people;
simply because others disagree with their actions.

A few moments spent perusing a dictionary will show that simply refusing to
take in a storm victim, while abhorrent to me, does not make one a bigot.

4304. Yaesu 1000SDX opinion

Newsgroup: rec.radio.amateur.equipment
Date: 2005-09-15 15:18:35 UTC
From: David Snyder Hale <n3wtk@REM0VE.ARRL.NET>
Message-ID: <dgc3cbjkp1@agate.berkeley.edu>
Source record: 13526

I see that the Yaesu 1000SDX rotor doesn't get a very good review on eHam.net (20 reviews result in 3.5/5) but I thought I'd run my own poll here. Newsnet always elicits all sorts of opinions (usually without asking, though).

I'm thinking about buying one of these but the 7 out of 20 poor reviews at eHam have me concerned.

Thanks,
--

Perhaps you could show me where any of the offered definitions apply to an HOA rule that prohibits non family members from residing in a home.

I'm looking at these GMRS motorolas, one is a t6510xmrs and another is a t5520. Here's the thing: both have a power output of one watt, but one claims to have a distance range of 8 miles, and the other 5. Is this BS or what? Why would one 1 -watt radio have more range than another 1 watt radio? They both have the same size antenna.

Paul.

I've always gone to One Of The Big Hardware Stores and purchased 2 (two)
of the 100 foot 14 ga. extension cords that they seem to sell as "loss
leaders" every other week or so. The Plus is you get a whole lot less
voltage drop on a long run for the rotator. (And, if you cut the ends
Just Right, you can make up a set of 4 short extension cors. HI!HI!)

The difference might be real, due to improved receiver sensitivity or
to the use of an antenna which looks the same but has lower losses or
higher gain.

The difference might be illusory, due to differences in the assumed
test conditions (e.g. height of the radios above ground clutter and
obstructions, or just what sort of signal intelligibility qualifies as
an acceptable contact for the purposes of figuring out range).

The difference might be marketingbabble - numbers pulled out of the
air, or out of somebody's bodily orifice, for the sole purpose of
making the radios seem (and sell) better than those of the competition.

Frankly, I suspect that a a 1-watt GMRS radio is likely to achieve
even the lower of these two range figures (5 miles) only under rather
optimistic conditions... e.g. both users are up on the tops of
buildings or hills, with a clear line of sight to the other and with
no obstructions in between the two.

In a typical suburban ground-level setting, I wouldn't count on
getting signals to go more than a mile, and you'd probably have to
walk around a bit to find a location with a clean signal path (direct
or reflected) to the other.

The small "eye of the needle" gate at the walls of a city
was sized for human beings. It was camels that couldn't
get through it. Camels had to enter through the main gate.

I have a VS-35M which is the variable-voltage version of your RS-35M
and I've used it to power rigs from 160 thru 2M and have never had an
RFI problem either way. Very quiet P/S. I also have an SS-30 switcher
and it's just as quiet as the analog supply. Astron "makes good stuff".

I agree...I've had this one almost 15 years now, and it's been
great. I did take a power spike in 95 from a lightning storm and had
to ship it then. As I remember then it was about $65 to fix it, and I
forgot what my out-going shipping is...The cheapest I can find right
now is $40...For that much plus what I am sure is an increase in repair
fees at Antron, I'd almost be better off going for a new supply.

K0HB said:

(Sorry, no schematic)

UNQUOTE

Thanks anyhow, Hans...This unit had sat unused for almost 2 years,
and I didn't know whether to consider the failure during tune-up to be
due to that, or the fact I was on a band I hadn't used before. I had
made 1 QSO with Jim, N2EY on 30M a week ago and had no problems then...

The CH53A and D Sea Stallion's used to have a problem losing the
primary AC generators if the HF was tuned up on 7 or 13MHZ due to RFI
problems in the overspeed protection system.

Hopefully someone else can come up with the schematic for
me...I've got several feelers out.

Hi Hans,

I will leave that to other faiths to describe for themselves. One
distinct difference between Christian charity and Islamic charity is
that Muslims are commanded to give the expected portion of their
charity directly to the afflicted. This means hand-to-hand.

>, and do I need to be a
>member of your cult in order to get through the eye of the needle (and why would

Complete the allusion and enlighten us to which cult offers fare
discounts for buying the way to Heaven. Of course, if you have no
interest in the destination, then the subject is rather transparent
and hardly requires comment.

Oh, I agree totally. It is why I made SURE there were no such things. To my mind, if you do your research carefully BEFORE you buy, it ain't a problem. I simply was not going to HAVE anyone telling me that, if my car broke down and it sat there for awhile, but not "derelict", that I would have to move it.

If you pick carefully, the economic factors will keep "riff raff" out of a neighborhood; zoning and general city ordinances will take care of the rest. In my city, if you let your grass grow over a certain height, the city will come and cut it and charge you $100. Few people ever allow that to happen!

I simply refuse to knuckle under to ANY HOA or covenant-restricted community, nor will I tolerate some busybody coming on MY land and telling me what color I can paint my door, or how many antennas I can put up. I am a quiet, non-obtrusive man, I keep my yard and house presentable, I mind my own business; you would scarcely know I am there. But nobody is going to regulate what happens on my property beyond reasonable safety and esthetics. I just happen to feel VERY strongly about HOA's. If somebody tried to start an HOA, I would REFUSE to join it (street maintenance is what I pay taxes for!). If they start mouthing off to me about it, then they'd best go home and, well......just be quiet. I'm having NO part of HOA's. :)

Steve, my RS-35a took a spike and blew up many years ago. Actually the MOV blew up, the rest just quit working. I ordered new power transistors (4), a new regulator chip, and a MOV. I replaced all of it. Be sure to screw the power transistors down tight. Then I turned it on, and it worked again. But I'm not an electronics engineer, nor do I pretend to be one on RRAP.

I'll look through my files and see if I have the schematic; the only diff should be the meter circuits.

Brian

Not all that easy. My MIL became "treasurer" of her condo
association, but the clicque of other jerks did everything they could
to keep her away from any past books. She eventually found they were

sanctioning members who were a couple of months behind on their dues, while many of the board members were in arrears for as much as 18 months.

Look for a CB handi-talkie with as close to 5 watts output as you can
get. It might do 2 or 3 miles, depending on circumstances and battery
charge or if you're willing to climb up a tree...

Gee. I'm actually glad that my initial posting of this link (the one that was up before Charlie's by about 10 hours) didnt go out to all these other groups, only to alt.ham-radio.vhf-uhf. Far to many spastic individuals replying with unrelated and often inane comments. How come I'm not surprised.

"friend" I challenge you to quote an official Catholic source to support your 'sale' assertion!!

For those who may be interested in putting this outrageous statement to rest, I suggest a trip to your local library and read the official position of the Catholic Church. It is openly published in the public documents of the Second Vatican Council, in a book titled "VATICAN COUNCIL II - The Councilar and Post Councilar Documents", Section 1 titled: "The Constitution on The Sacred Liturgy", dated 4 December 1963, Sub-section 1-6, dated 1 January 1967, titled "Indulgentiarum Doctrina" paragraphs 1 through 18.

Please note that "an_old_friend" has stated another outrageously erroneous misuse of language. 'friend' states "DOGMA". The official pronouncement is DOCTRINAL, not Dogmatic. There is a very significant distinction between the two words.

It has NEVER been the DOGMA of the Catholic Church to sell indulgences. PERIOD! A period of clerical abuse of indulgences, contrary to the Doctrinal position of the Church, did exist in history. Martin Luther was correct to cite this failure in clergy practice. The abuse was censured in the Council of Trent [ca 1545 - 1563].

Note[1] to 'an_old_friend': be sure of your facts before you post outrageously erroneously statements.

Note[2] to 'an_old_friend': your 'prod' sources are also in error.

Signed Ham Op, Catholic Clergyman

Dear Brian and Everyone else,

Thanks to all for the help, both here and e-mail...

Brian, I think the power transistors are OK, but will swap that
chip and see what cooks...Will let ya know.

I am not sure I understand the question. I think you have the rotator upside down on the tower at the moment. If it went through some weather, it is probably full of water now. The way I would handle the problem is to remove the rotator from the mount and hang it on the tower (clothes hanger wire) right side up. I would hang it there for a few days to drain & dry out. When it comes time to reinstall the antennas, test the rotator for proper operation. Chances are that it will be OK. If you seal it tight, the moisture will be sealed in. These things are intended to be able to breathe!

If removing/replacing the rotator is a major hassle, I would either send it to one of the maintenance guys or put up a new one & sell the old one on ebay WITH the explanation. There are lots of us who have setups that are easy to change.

If the rotator must be left in the inverted position outside for an extended time I would wrap it in black landscape plastic and duct tape to prevent more water from entering while leaving the bottom of the plastic open to dry out.

> These things are intended to be able to breathe!

The tower is currently up (the mast broke above the rotor, so all the antennas are dangling by their feedlines, but the tower itself is OK) and the rotor is in its normal upright position. It will be upside down when the tower is folded over to work on. As far as I know, the rotor is fine right now.

> If removing/replacing the rotator is a major hassle, I would either
> send it to one of the maintenance guys or put up a new one & sell the

> setups that are easy to change.

Don't understand this. Yes, removing/replacing the rotor is a hassle, largely because it has to be done with the unit upside down, and standing at the top of a ladder. But that isn't the issue here - in fact, there is no obvious reason to remove the rotor at all, since it seems intact. Just remove the stub of the broken mast from the thrust bearing and put a new one in. The issue is that while that is done, and the new antennas are mounted, and new (or repaired) feedlines are run, and all the antennas are tuned, the tower will need to be folded over, with the rotor mounted, and these steps will almost certainly take several days. Because of availability of helpers reasons, this will likely have to be on weekends, meaning the tower will be folded (and the rotor inverted) for a period of at least 1 to 2 weeks.

I have done this in the past, but because of the way the rotor is mounted on the Rohn tower, it isn't possible to seal it very well this way - I was looking for suggestions for better ways of weatherproofing it for this period.

Have used both over the years (at least one and perhaps both on this
particular rotor :-)). I don't believe that either had specific
suggestions for this problem.

> Secondly, with some experience with HAM type rotors I would suggest

> attachment) and the black rotating part.

The unit has a terminal strip, but this was "remoted" via a short cable
the last time one of the rotor repair vendors overhauled it, and the
point that the cable exits was heavily sealed. (This was done because
the terminal strip is blocked by the Rohn rotor mounting plate.) The
space between the fixed and rotating parts is the one of concern.

> The cable attachment point will be trickier, but you may be able to

> between the moving and non-moving parts. Just roll it up and stuff it
> in.

I'd have some concern about some of the putty getting into the bell of the rotor, where it could cause problems. I'm currently thinking of using tape (perhaps just masking tape) to cover the opening, and then covering this with sealing foam or something else. The tape would be to prevent any of the sealer from entering the bell.

> I would follow that up with some sort of shroud. The garbage bag/duct

Just garbage bags and duct tape isn't really sufficient (or hasn't been in the past) because the way the rotor is mounted on the Rohn (seems to?) preclude wrapping it well without gaps that let rain in.

Haven't ever had (noticeable?) problems with loss of grease.

> What many people ignore is the instruction right in the manual

> bearing. Since you're almost certainly going to want to take it apart
> for a cleanup after all of your other repairs are completed, you can
> take care of any missing grease (and "stuff") then.

Actually, no plans to take it apart (hence the concern about "stuff" getting in). It was overhauled after tower damage _last_ year (not directly hurricane related, but...). As far as I know, there are no current problems with the rotor, so if at all possible, I had planned on leaving it mounted, and just replacing the mast and other thing above.

> There are two kinds of hams: those who have had bearings on the floor

> with a significant boom to crank it over. Those things are killers. I
> had a friend in Oswego, IL, who broke his arm when repairing his after
> it went over during the Plainfield tornado. The kit for 45 is MUCH
> stronger.

It indeed _is_ a half-way up fold-over. No other style works in the location (well, at one time in the distant past, I had a crank down, fold over at the base tower, but current versions of such either won't fit the space or won't fit the budget...) Have had it and folded it over many times for many years without problems (lost it in hurricane Andrew, but no problems for 10 years before or after that). However, have lost the hinge section a couple of times in the last few years - once because a wind gust spun it sideways while it was being cranked up, and once because the boom got caught in a guy without our noticing while it was being cranked up. I'm a lot more concerned (and careful) about it now than in earlier years, but (for the above reasons) don't expect to do anything about it if it can be avoided. We've avoided injury by keeping well clear while it is going up and down, and (trying to) control rotation by using guide ropes well to the side and out of the path. The 45 _is_ much stronger, but it would be difficult to fit, and would require replacing the entire tower, which is effort and expense that isn't viable right now.

> Good luck on all of your recovery.

Thanks!

Marshall

Agree, very nice and it would be a great radio for when you are way out in the middle of nowhere with an emergency. You can always contact a plane flying over to relay your position and situation to local authorities and not have to rely on a Ham 2 meter repeater being nearby. Very cool radio and nice size and battery life too.

Paul-

Both are theoretical values for person-to-person communications over level ground with no obstructions or reflecting surfaces. Since the communications path is essentially line-of-sight, slight efficiency differences in power or antenna gain make little difference. Therefore, the differences must be based on some assumption that was different when calculations were made.

For line-of-sight, you can approximate the distance to the radio horizon for each, and add the two for total maximum range. Suppose a person holds the handheld radio up to their face, and it is five feet above ground. The distance to their radio horizon in miles, is approximately the square root of twice the antenna height in feet, or 3.2 miles. Range to another similar person would be 6.4 miles under these ideal conditions.

You should see that estimating distance based on different heights can result in differeing ranges. A height of 3.125 feet (sitting down?) has range of 5 miles, and a height of 8 feet (basketball player?) has a range of 8 miles to a similar person.

This approach works fairly well from mountain to mountain or airplane. Based on power and receiver sensitivity, the limiting range might easily be greater than a hundred miles. In the real world there are reflections that cancel signals (Multipath), tall objects that block signals and vegetation that absorbs them. Person-to-person on typical terrain might easily be limited to less than one mile.

Fred

It is all BS
First; Don't believe the mileage claims of any manufacturer, even Motorola. The specifications which make a difference are not published by most of the FRS and GMRS manufacturers.

There are important considerations used to calculate the BEST CASE range of a portable radio, however it is unavailable for independent evaluation.

1. Antenna gain or loss (usually a loss for a handheld) NEVER PUBLISHED
2. Receiver sensitivity SELDOM PUBLISHED
3. Transmitter power SOMETIMES PUBLISHED, BUT MISLEADING

The above values figure into the "system gain" and can be used to estimate "best case" line of sight communications" when you factor in "free space loss" for the distance. But this only works mountain top to mountaintop!, the path is always worse than free space loss when there are obstructions like hills, buildings or foliage. I have never seen any manufacturer other than ICOM provide receiver sensitivity values, no manufacturer will tell you the antenna gain/(loss), but if you know the FCC certification number, you might be able to figure it out to some degree from FCC records.

4. Receiver selectivity (immunity from interference on adjacent channels) NEVER PUBLISHED
5. Receiver intermodulation (immunity from interference and overload from multiple off frequency transmitters) NEVER PUBLISHED

These two above reveal how well a receiver will work in an urban or suburban environment, or even when on a hilltop amongst broadcast towers. None of the manufacturers want you to know how bad their receivers behave with respect to the above. If the receiver is prone to getting interference, your range diminishes rapidly.

6. Transmitter current drain
7. Receiver current drain
8. Operating time

These you need to know if you plan to use the radios on disposable batteries over an extended time. Don't buy an FRS or GMRS radio unless you can power it from AA batteries (AAA's suck!)! Operating time is calculated on a duty cycle like: 10% transmit, 10% receive, 80% standby. To improve on operating time, the ICOM IC-4008A and IC-4088A FRS radios publish these specs and their radios are equipped with a battery saver feature so you can go days with the same set of batteries.

Paul;
I will add another angle;
Motorola used to make a low cost mobile radio called the "MOXY". It was a cheap radio to compete with Japanese brands. Motorola also sold a somewhat more expensive model called the MAXAR 80 targeting buyers wanting a high performance dash mounted radio. In the high powered UHF and VHF models of 30 watts and higher, the MAXAR 80 chassis was used in both the MAXAR 80, the MAXAR (slightly cheaper) and the dirt cheap MOXY. All three radios had same guts (a pretty good performer by the way) but were given a different set of performance specifications. So the guy who bought the MOXY (which was an ugly radio with a tiny mike!) got just as good a radio as the buyer of the hyped up MAXAR 80.

It is called specsmanship

My G-1000SDX has been up in the air for 7 years and is still going
strong turning my TH-7DX and the VHF/UHF stuff above it.

I have a Sangean/C.Crane CCRadio, a few years old. The display screen shows only bits and pieces of numbers and letters. Any known, easy fix I could do?

I contacted the C.Crane company, and they want $49.95 just to have their repair guy look at it, plus shipping both ways. Might as well get a new one, as do that -- so, looking for a home fix.

Thanks,

Bob

Does it have a custom LCD display? Most of them use thin "Zebra"
strips which are alternating layers of conducting and non conducting
layers. They are used to make contact between the PC board and the
conductive areas that are printed on the back of the display. They dry
out and shrink, but you can usually remove them, clean them in pure IPA,
along with the contacts on the PC board and the display. I've done this
to a lot of DMMs and other test equipment with a very good success rate.

I haven't looked to see what these particular "wonderful bargains" are,
but what A considers to be trash and will consign to the dumpster B
might be in desparate need of and pay money for. And as long as B pays A
more than eBay charges (plus the shipping charges), A is ahead.

It's not aircraft equipment, it's a single-band ham transceiver that
can receive aircraft. There are cheaper multi-band ham transceivers
that have wider receivers than that. My VX-5, for example, can
receive aircraft - AND any frequency from 0.5 MHz to 999 MHz, AM, FM
or WFM, and can transmit on 6, 2 and 440. And it's cheaper.

From what I see on their web page, it appears that the VXA-700 is an
airband transceiver (not just a receiver), with 2-meter amateur
operation added.

It does look as if it re-uses a lot of the VX-7 construction.

I'm not sure whether it is a custom display -- it shows the frequency
readout plus various functions of the radio; I'm guessing the display
is made for this radio only. Anyhow, if I can get the case apart, I'll
look at what I can do to clean the LCD strips.

Thanks for the tip.

hi,

A large sheet of 6 mil clear plastic should be able to
cover the tower and the folded over section.

Place a container of DampRid on the rotor shelf
before you cover the tower with the plastic sheets.

Two layer of sheet should do the trick.

Drape the plastic 4 or 5 feet below the rotor,
no way for any water to get inside the rotor.

Tie it tiht with some good rope and your done.

The damp rid will absorb any moisture that it
trapped during the day from the hot sun
heating up the top of the 'rotor bag' you just made.

Or just take the rotor inside.

good luck with the repairs.

Far from correct. Catholiic dogma in fact has a specific name
for the sin of selling indulgences or objects which have been blessed
-- it's called simony. Since at least the 40s, AFAIK.

It is definitely a transceiver on the aircraft band. I fly and carry it as
a
backup in the plane. Also has a backup VOR (navigation) capability
as well as FM radio. Nice piece of gear for a pilot. Plus, as was
mentioned earlier, it has 2m capabilities. Pretty cool.

Nowhere in The Bible does it say anything about a man finding
it difficult to go through the eye of the needle. The "eye of
the needle" gate was designed to allow men through, even rich
ones, and keep camels out. The difficult thing for men was to
enter the Kingdom of God, not get through the "eye of the
needle" gate.

That was the mission I was thinking of. I used to fly a fair amount of
single engine,single pilot night IFR. My only remedy for a total
elecrical system failure was to always know which way to go to find
clear weather... This device would avoid an emergency operation.

Is there anywhere I can see more detail of the VOR capabilities?
I looked over the web site but it doesn't really show what it
can do in that function.

I notice that on the referenced website it shows the radio to be
discontinued and no longer in stock. Apparently, there will be a
replacement.

Here is a site where you read some reviews on it.
http://www.eham.net/reviews/detail/3377?ehamsid=5338e5b69d2d1c74d8de94e000253471

You can read all about it here. Get manual, brochure, etc.

Whatever.

I have got to be one of the most "prayed-for" people there is. The
people that say they're "praying for me" remind me of the villagers in
old horror flicks that would hang up garlic and crucifixes to ward off
werewolves, vampires, fire-breathing dragons, Amway dealers, etc.

Agreed. I think it got lost in my trailing ellipsis. :-)

man:heaven - camel:eye, more or less.

Even with your disbelief, I'll still pray for you.

There are two common anecdotes. One in Christianity, the other in Islam.

1] Work like everything depends on you. Pray like everything depends on God!

2] Trust Allah, but tie your camel.

Here is a message from a Baptist [Christian] Pastor about 10 years ago.

"Man does his part; God does His part.
Man does the sinning; God does the saving."

May God increase your faith.

Hmmm...good question. Don't know if there is a web site where you can go look.
The manual has details on how to use the VOR capabilities. Essentially, you can
select any VOR frequency (I think ILS too) and get course/bearing info, as well
as a CDI indication if desired. The range of the VOR capability is very limited.
I would not expect to do any real world navigation with it, but as a backup, it
could be indispensable (if everything else crapped out). The VOR was an added
bonus for me as I use a yoke mounted GPS (in addition to the VOR receivers in
the plane and a Loran). So I really bought it for the backup voice capabilities.
Also nice for getting ATIS/AWOS, clearances, FBOs, etc., while sitting on the
ground.

Hi folks! General hardware question, and I may be in over my head.

One of the prime camping locations at a nearby park is unfortunately
in a valley. This has the effect of radically limiting our GMRS
radios.

Would it be at all useful to run a mobile or base antenna about
50 feet up a tree and leave an antenna line so that we can just
plug in when we're at camp to get in contact with folks out
in the bush?

The amount of info out there is overwhelming. It seems like with
the tiny (~ 1W) radios, it's going to be important to get as
low-resistant cabling as possible.

Can anyone make a suggestion as to the right hardware for the job?
Is this a scenario where I'm going to need to "tune" an antenna?
Heck, is this even worth it?

Thanks!
WB

Quite possibly so, if your feedline has low-enough loss.

GMRS is a UHF frequency, which propagates mostly by line-of-sight. There's some diffraction around edges, and some amount of reflection, but as a general rule you can expect a better signal (somewhat-better to lots-and-lots-better) if at least one antenna is up out of the "ground clutter".

Feedline loss, on the other hand, will work against you. Thin feedline will eat up a lot of your transmit power and your received signal... e.g. ordinary RG-58 will lose about 6 dB (that's 75%) of the power in a 50-foot run. That might, or might not, overwhelm the advantage of having the antenna up at some height.

You can get the loss down to 4 dB by using RG-8X "mini" coax. Standard RG-8 cable will lose 2 dB, which ought not to be a problem.

A decent combination might be to use a GMRS base antenna which has a few dB of gain, and a run of RG-8X (which is fairly light and unobtrusive). The antenna gain and the feedline loss might just about cancel out, giving you something roughly equivalent to what you'd get if you were standing up in the tree with the radio :-)

>Can anyone make a suggestion as to the right hardware for the job?
>Is this a scenario where I'm going to need to "tune" an antenna?

If you buy a pre-tuned commercial GMRS antenna and its usual installation kit (which may include pre-tuned radials), it'll probably be a "wire it up and go" job, with no antenna tuning required.

Be careful to take all of the appropriate precautions - e.g. a climbing belt/harness, safety rope, and so forth. A distressingly large number of amateurs are killed due to failure to take proper safety precautions when climbing towers, buildings, and so forth.

Also - for legal reasons, this sort of antenna mod can only be done to
a real GMRS radio, for which a GMRS license is required. It's not
legal to modify the antenna setup on an FRS radio.

Is it worth it to shoot the extra cash on LMR 400 or Heliax?

> The antenna gain and the feedline loss might just about

On the topic of antennae, I see mentions of a "no-ground-plane" antenna.
I assume I need one of these since it will be up in a tree?

Hoping to do this one without a climb. I was thinking of shooting
a guide wire over a branch and using it to haul the antenna up, with a
few wires to stake it down with.

> Also - for legal reasons, this sort of antenna mod can only be done to

Right, I think FRS radios come without the removable antenna for this
very reason.

Thanks, Dave!

Both these lines are very heavy compared to 8X. I doubt that a few db will make or break your ability to use the radio. If the valley is very deep, I doubt that 50' in elevation will help much either, especially if you are trying to communicate 'over the hill'. These are line-of-sight radios.

Another thought if you are into 'build it yourself'. There are eight
GMRS frequency pairs reserved for repeater use. Cobble together a
low-cost, solar powered GMRS repeater. Is there someplace you could
install it on the peak of a nearby hill?

I doubt it, in the case of LMR 400.
No way, in the case of Heliax.

>On the topic of antennae, I see mentions of a "no-ground-plane" antenna.
>I assume I need one of these since it will be up in a tree?

You can either use a half-wave end-fed radiator such as a J-pole
(which needs no ground plane).

Or, you can use a quarter-wave or stacked-collinear antenna, which
does need a ground plane. Many of these will come with a set of
radials which are attached at the bottom of the radiator, and which
serve as an elevated ground plane.

>Hoping to do this one without a climb. I was thinking of shooting
>a guide wire over a branch and using it to haul the antenna up, with a
>few wires to stake it down with.

In that case, you're definitely going to want a relatively light
feedline, since the antenna and its connector are going to have to
support the weight of the feedline all the way to the ground. I
wouldn't use anything heavier than RG-8X in this situation.

>Right, I think FRS radios come without the removable antenna for this
>very reason.

Correct.

Wow! That'd be a fun little project! I'm not very talented in the
DIY department, but it doesn't stop a guy from tryin'.

I'll have to re-scout the area. Most of this is old-growth forest,
so solar might be very limited.

At one time Radio Shack sold a FRS radio that was designed for use in
an automobile. There was a part that went in the car and an external
antenna that went outside. The part that went in the car was really
just a remote control head, with the real radio being in the base
of the antenna.

If you can find one of them and get someone to seperate them
by a much longer cable, it would give you the height that you need.

Geoff.

I just love to read superstition discussions. It helps me understand
why we really haven't gone anywhere except with the technical side of
civilization.

If the "Kingdom of God" doesn't actually exist in reality,
it was an especially logical statement, eh? :-)

Christian Charity is a point scoring exercise with God. It is done for
selfish reasons, to make sure you are noticed by God and he lets you in.

Can anyone help me with a copy of a user manual for the ERA Microreader
please.

I've googled and looked around and can't find one although I believe that
there used to be a .pdf version somewhere.

I know the ERA isn't cutting edge and not rocket science to use but a manual
is always nice to have with it for "senior moments" when the brain goes
blank.

Any costs happily reimbursed of course.

Steve

I hardly consider myself a fanatic, and am extremely unlike to "hammer"
anyone over religion, or lack there of.

Some of the most fanatical are those members of the religion of atheism.

These folks find it threatening that someone may have a set of beliefs, and
feel the only recourse is to attack those beliefs. Makes one wonder if they
find it necessary to stand in department store lines, demanding that little
children give up the idea of Santa Claus, which they find equally
believable.

I personally don't care what anyone's belief set is. I do find it abhorrent
that some are more active for atheism , than a Jehovah Witness beating on
the door selling salvation.

My feeling is that most are simply crying out for attention, and know the
religion button is a simple one to push.

Fred brings up an interesting point. Atheism IS a RELIGION!!

I define RELIGION as a set of beliefs that influence behavior.

Merriam-Webster defines RELIGION in a similar fashion [Note #2 and 4]:

"Main Entry: reï¿½liï¿½gion
Pronunciation: ri-'li-j&n
Function: noun

Etymology: Middle English religioun, from Latin religion-, religio
supernatural constraint, sanction, religious practice, perhaps from
religare to restrain, tie back -- more at RELY

1 a : the state of a religious <a nun in her 20th year of religion>
b (1) : the service and worship of God or the supernatural
(2) : commitment or devotion to religious faith or observance

2 : a personal set or institutionalized system of religious attitudes,
beliefs, and practices

3 archaic : scrupulous conformity : CONSCIENTIOUSNESS

4 : a cause, principle, or system of beliefs held to with ardor and faith"

4471. old YAESU FT815 - no sound, no xmit - got manual?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-09-21 22:06:29 UTC
From: rjvalenta@yahoo.com
Message-ID: <1127340389.111148.44100@g47g2000cwa.googlegroups.com>
Source record: 13444

so over 10 years ago I got this ft-815 - a UHF handheld, small and decent - and best of all i was able to mod it so i could listen to my local PD. i used it off and on for a few years and then got sidetracked by other gear and other things.

eventually, i had lost the battery's charger (battery was FNB-25), so I just used my Alinco DJ-580T thinking I'd eventually get the charger for the FNB25 - but i never did.

recently I dug both radios out, and got some cables and so on from radio shack and got them both pwoered up. BUT - While the Yaesu will actually still charge (from the DC Power port up top & no idea for how long it will hold) - I cannot get much sound out of it, its almost like its being told to broadcast at 10% output. I also hooked up a speaker-mic thinking the speaker was rotted or soemthing, same result.

but it beeps, and tones, and so on, I lost the manual, so I've been playing with it - set some channels, and tried to xmit - that was bad as well, it barely sent through static.

no matter what i do, there's an S in the bottom of the screen, and it blinks when i set channels or do other things - i cant help but wonder if its some kinda squelch which is keeping the sound muted.

when i power it up, it seems to work fine, when i press the transmit the light will go red just for 1/2 a second, then it still acts like its xmitting, but the light goes out and only quiet static on the other end - and the receive is really muted.

IDEAS ANYONE? before I pitch it, I'd love some ideas - if no one has any, I guess i'll put it on eBay for parts or give it to someone who wants to fix the Alinco's rapid charger - any comments accepted...

richard
N0TZC

PS - if anyone has a copy of rht FT815 Manual - please let me know or email it! Thanks!

If we accept this definition of "religion" as a system of beliefs that contains unprovable statements taken only on faith, then Kurt Godel taught us that mathematics is not only a religion, it is the only religion that can prove itself to be one.

Wow. I have faith that if I fall off the rim of the Grand Canyon, or
any great height, that I will most likely bite the big on upon landing.
Therefore I do not engage in risky behavior such as spinning around
until I get dizzy when I am near the edge of long drops.

I believe that I will bite the big one if I fall hundreds or thousands of feet. My belief most definitely influences my behavior.

So Have I come up with some new sort of religion here?

And I truly see you reading a lot more into this than the definition provides

Hans, the Atheism as a religion is just a reserve argument that the CC Fundies are holding in their hands, so that they can claim that Evolution is a (atheistic) belief, and therefore a religion, which leads to the argument that they have every right to force their religious beliefs on us, since the "religion" of evolution has been forced on the nations children for so long.

Hi,

Some of you, hopefully many of you, may be aware of the existence of the "Amateur Radio Course" project which provides a number on-line and downloadable tutorials for the various UK amateur radio examinations.

Due to the sudden, unexpected and unexplained withdrawal of support by the company who up to now have very kindly hosted our web-site free of charge, and their even more unexpected failure to communicate with me regarding how we might transfer or redirect the URL which they registered for us but now will not let us use, our site is no longer available to the clubs and individuals who benefited from it.

Can you therefore help us and please publicise as widely as possible the following information.

The "Amateur Radio Course" which was located at www.ukradioamateur.org is now relocated at www.radioamateur.co.uk

There may be a number of functions that are not working due to the sudden move, but they will be fixed within the next few days.

It remains, as always, a non-profit making activity sponsored and supported entirely by the group of individuals who give up their time and resources free of charge to support and promote interest in the hobby.

I apologise for posting this message in so many newsgroups, but I need the new URL to be publicised as rapidly as possible.

Many thanks to you for your help, best wishes and 73's

Hi Hans,

Godel actually taught us that any system of belief, by its own rules
of consistency must include the statement that

1 + 1 = 3

Technologists would find that quite difficult to live with, some of
the religious (if not in that same crew) would also find it difficult.
Then there are those who would simply accept it on faith.

Message-ID: <1127373902.285226.251610@g14g2000cwa.googlegroups.com>
Source record: 13361

Hello,
I have a TR-851E (european version) and I'd like to add an internal
tone encoder
unit (self made) to be able to access the newcoming sseti express
satellite.
The problem is that the internal tone unit is activated only in the A
version,
while in the E version the 1750 Hz burst tone is active. I didn't want
to lose
the 1750 Hz burst and I played a bit with diode configuration on the
control
board but haven't find a configuration that enables both the tone unit
(with
func + voice keys) and the 1750 Hz burst (via the "tone" key).
Do anyone know how to modify the radio to allow (if possible at all)
both
kind of tones?
Thanks in advance.

Yeah? When was the last time an atheist:

- rode an airplane into a building?
- killed a doctor?
- bombed a planned parenthood clinic?
- scammed people put of their money in the name of atheism?
- blew himself up, as well as dozens of innocent civilians?
- imprisoned, oppressed, tortured and murdered various minorities simply because of their religious orientation?
- attempted to introduce superstitious nonsense into the public schools' curriculum?
- withheld medical help or vaccination, genitally mutilated or otherwise endangered the life of a child on the basis of his atheism?
- attempted to impose his own brand of "morality" that denies basic freedoms, liberties and other human rights to all sorts of people?
- started a war, religious genocide or mass murder in order to promote atheism specifically?
- formed a cult that sexually abused children, financially and physically drained the followers, then convinced them to commit suicide or simply killed every cult member?
- promoted legislation, laws and even Constitution change based on cherry-picked bullshit from some scripture?
- encouraged other atheists to kill as many non-atheists as possible?
- and so on...

> Fred brings up an interesting point. Atheism IS a RELIGION!!

Sure, also war is peace, freedom is slavery, ignorance is strength.
Isn't Newspeak grand?

> I define RELIGION as a set of beliefs that influence behavior.

And I define black as white. Is today International
Pull-a-definition-out-of-your-ass Day or are we applying the Bush
administration doctrine to everyday life now?

Fair call - guess it is an indicator of how ridiculous and off topic that
this thread has become. Religion will always be a divisive issue but it
really has no place in any of these NGs - can we please either end it or
move it elsewhere to somewhere more appropriate?

>That's especially true when faith is blind...

Well, in fact, the faith (by Godel's criteria) has nothing to do with
being blind, or by avoiding examination at all. By Godel's proof,
that broken rule of addition comes from inspection and rigorous
application of the rules. Self-contradiction is an inevitable
consequence. If you cannot accept the contradiction, then you lack
faith. Mark it up to "the Mystery."

The reason is that one cannot "know" when one is part of what is
trying to be "known." Another metaphor is that one cannot completely
describe the field, if one is standing within the field (the observer
can not see everything at once, and must be obstructing some view, if
only to be standing on it). Hence all knowledge is incomplete unless
you can withdraw into another dimension (or by stepping over the
field's fence into a greater field encompassing it).

Godel then points out that at that point of extra-dimensionality (when
you become a minor deity), you are still faced with the same problem:
you cannot possible "know" everything about the field within which you
stand, because in this new dimension you are once again obstructing
your view to some portion of it.

Math can only accurately describe a subset of experience, never its
whole. Same problem resides in all the religions without exception.
The only time Man did not have this problem was before the "Fall."

This state is what is also called Nirvana. By all accounts, Man will never walk with God again.

Of course, others may beg to differ, and suffer the consequence of explaining why they cannot explain:

1 + 1 = 3

variously heard in prayers (OK, wails of grief) as:

"Why ME?"

To confound the pious who reject science, they suffer the most from lack of faith. Evidence Lord Kelvin's statement:

"The more thoroughly I conduct scientific research, the more I believe that science excludes atheism."

The fumbling attempts to rewrite Darwin, replacing it with untelligent design, are heretical works of apostasy.

Hi Matt,

Adolph Hitler had the support of the church and a religious society
(need we say it was NOT the Jewish religion?). If you need two more
names (a tedious exercise with an obvious outcome) simply enter the
phrase:
"kill them all and let god sort them out"
into a search engine and wade through the 20000 links that to little
exception imply any atheistic manifesto.

Hi Matt,

As so well demonstrated in the historical record, ethics and religion are not the same thing. To say atheists lack any counter (ethics) is also shown in the historical record to be wrong. By some accounts, Buddhism has no god, is quite ethical, but also quite atheistic. This could also be applied to Jainism. Unitarians hardly demand the existence of God, the imposition of beliefs is not in their code, whereas their ethics are guided by rational thought rather than external authority.

Science has nothing to do with faith because the essence of science is
to continually ask questions, and explore new possibilities. IOW,
science is readily open to change, and will admit it's mistakes if
close examination of evidence reveals such things to be so. OTOH,
faith is rigid, and is not subject to any change among those with
"true believer syndrome." Faith, especially blind faith, expects one
to believe without asking any questions, and just accepting things as
they are presented.

Hi Matt,

This looks like a homogenous world point of view, where those who are
____, are not; and those who are not ____, are. A circularity that
fails in science, but certainly has served religion through the ages.

Consider the enigma of:
>Sociopaths may be the only true atheists;
is a mechanistic approach to morality, which is amoral.
>the rest are simply uninformed of their own dogma.
And to distinguish them from the informed (and not simply those who
disagree):
"kill them all and let god sort them out."

Hmmm, that's how we got here.

You really need to study Ayn Rand's take on Objectivist ethics.
The objective thing to do is to grant to everyone the rights
that you require for yourself, no matter what you believe. It
bears a close resemblence to the golden rule.

Yes. When I sit down in my chair at my computer, I have a fair amount
of certainty that my fat ass won't end up on the floor due to the
chair suddenly breaking. Now, you can call that faith if you want, but
it is certainly far from the BLIND faith that religionists spew on
about every day across the shortwave bands.

>May I suggest that without faith, there is no science. Most
>scientists who have achieved the age of 50 come to realize just how
>much faith science requires.

...which only shows that even an intelligent and well-read person can
fall for stuff that passes as science if that have no critical
thinking abilities.

If not an atheist, what do *you* call a person that doesn't believe in
some big sky fairy called "God", or that some Jew-on-a-stick died and
came back to life some two thousand years ago, or any other deity for
that matter?

Those preachers don't believe anyone can be moral without bowing down
to their so-called kind, loving "Christian" god that threatens people
with eternal torture after they die if they don't kiss their god's
ass.

The difference between me and you is that I know it's always wrong, and
you seem to have left an opening for your "religion" to do evil things
becuase your morality says it's ok.

I'm sorry that you can't understand that an atheist can have morals not
tied to superstition, but to to true right and wrong.

"Everyone has to believe in something."

I guess I'll believe in Bokonon.

In Cat's Cradle, Kurt Vonnegut, Jr., created a new religion, Bokononism. The holy scripture of Bokononism was "Books of Bokonon", written by a spurious holy man named Bokonon as a way to distract the people of San Lorenzo from their pitiful lives.

What is sacred to Bokononists? Not god; just one thing: man.

Here, to set the tone, are the opening verses of Book One of Bokonon

Verse 1: All of the true things that I am about to tell you are shameless lies.

Verses 2-4: In the beginning, God created the earth, and he looked upon it in His cosmic loneliness.

And God said, "Let Us make living creatures out of mud, so the mud can see what We have done." And God created every living creature that now moveth, and one was man. Mud as man alone could speak. God leaned close as mud as man sat up, looked around, and spoke. Man blinked. "What is the purpose of all this?" he asked politely.

"Everything must have a purpose?" asked God.

"Certainly," said man.

"Then I leave it to you to think of one for all this," said God.

And He went away

This tired old argument???

First of all I notice that you haven't addressed any of the specific
examples I gave about *theists* and their religious crimes.
Second, all of the examples I gave are about theists committing crimes
against humanity precisely *because* of their religion, directly and
indirectly.
As far as "Stalin, Lenin and Mao" are concerned, their crimes were most
certainly not committed in order to promote atheism, unless that atheism
was a vehicle for establishing communism, which btw, is de facto a form
of religion. Religion was not outlawed in the USSR and priests were
being prosecuted no more than the rest of the society. Communism and
theism can co-exist and did successfully in most communist countries.
Besides, Stalin spent years in a seminary. Some atheist.
One could just as successfully argue that since "Stalin, Lenin and Mao"
committed crimes and they all ate bread, then by your logic people who
eat bread are murderers.

??? You have got to be kidding? What has religion possibly done for
anyone except provided false hope while stealing their money?

Stifling science (from Galileo to stem cells), witch burning, condoning
slavery, religious genocide on unprecedented scale, eradicating whole
civilizations, oppressing women, condoning fascism and
national-socialism, suppressing human rights for minorities, huge waste
of resources that could be better spent elsewhere, contributing to
millions of dead from AIDS by banning contraceptives, flaming national
and religious intolerance from Ireland to Palestine, and I could go on
forever...

As for your "blight" comment, a majority of scientists are atheists, for
example. The percentage increases with education. That's education *not*
Kansas style.

Hi Matt,

Well, in fact the contradiction originated with your statements. No
one else theist/atheist posited them. As to what is "believed" by
anyone, that is a speculation when it is expressed by a third party,
you about "them" (whomever they may be).

>I'm still waiting for an atheist to explain how it is
>that he can have a moral point of view and not have a religious dogma.

Unfortunately, you've presented yourself as being the arbiter of who
is an atheist, and denying that classification of them by your own
test. This is self-fulfilling prophesy.

4526. looking for mobile with BLACK screen - like Motorola gear

Newsgroup: rec.radio.amateur.equipment
Date: 2005-09-23 15:10:49 UTC
From: rjvalenta@yahoo.com
Message-ID: <1127488249.530702.220360@f14g2000cwb.googlegroups.com>
Source record: 13299

I'm looking for a dual band mobile with black screen, and colored LCD (I hope I'm saying that right)...

For example: http://www.rigpix.com/icom/icdelta100.htm

Another example would be something like the Motorola Spectra (shown at: http://images.batlabs.com/mobiles/speca9.jpg) - but you can't get those in dual band.

Like the dash in my Cherokee, the only part that lights up are the numbers, etc - unlike most common radios which light up the back, and then have the characters/info in black.

In the end, I'm trying to find the smallest and least conspicuous head to mount in my car. Something with a black face would match my current instruments (and those in most cars I would think), so I'm hoping for suggestions.

If not, my backup plan is to go with Icom's IC-208h because of its small size & alpha display. I wouldn't mind some suggestions on small, detachable face, alpha display, wide receive mobiles as well if anyone has any thoughts - but first I'm trying to find something with a black screen - thanks for the help all.

For awhile, I thought Rita was going to come up I-45 but
latest estimates has it sweeping through East of me which
is good news. However, if two high pressure areas merge,
Rita will stall out over East Texas and dump tens of
inches of rain on me and my kinfolks. (The HWN frequency
is 14.325 MHz at 2200 UTC.) My ISP will probably go down
tomorrow morning.

>So you think everyone else should be the arbiter? Or perhaps that
>anybody else should be the arbiter?

Hi Matt,

A very strange question. You offer it in terms of a projection. The question:
>So you think everyone else should be the arbiter?
Is phrased not about a neutral subject, who should be arbiter, but rather is couched as do I think....

The neutral context would have simply asked: Who should be arbiter?

What I think is expressed by me, not you. You might ask questions, but phrasing them in speculative terms and projecting them into my mind is a prejudicial bias.

>Once again though, we digress from the argument. Does an atheist
>believe in anything outside himself? I submit that he most certainly
>does. You have admitted as much when you introduced ethics which
>requires a basis.

See what I mean? You have injected your own belief by asserting I made an admission. An admission is a loaded statement in a Christian cultural context relating to guilt. You could have as easily pointed out I raised the subject, which is a neutral observation. As such, this bias is inserting itself as a judgment of the moral validity and application of otherwise bland statements.

>Feel free to present an argument that rebuts any of those points.

Once you free yourself of contextual prejudices.

If we have faith in a god, we are theists, and therefore religious.

If we are not believers in a god, we are by definition atheists and therefore
not religious, all your Alice-in-Wonderland style wordsmithing notwithstanding.

Everyone has to believe something. I believe I'll have another martini.

Things I have learned from watching the news about Hurricane Katrina on TV:

1. The hurricane only hit black family's property.

2. New Orleans was devastated and no other city was affected by the hurricane.

3. Mississippi is reported to have a tree blown down.

4. New Orleans has no white people.

5. The hurricane blew a limb off a tree in the yard of an Alabama resident.

6. When you are hungry after a hurricane destroys your property, steal a big screen TV.

7. The hurricane did 23 billion dollars in improvements to New Orleans: now the city is welfare, looters and gang free and they are in your city.

8. White folks don't make good news stories.

9. Don't give thanks to the thousands that came to help rescue you, instead bitch because the government hasn't given you a debit card yet.

10. Only black family members got separated in the hurricane rescue efforts.

11. Ignore warnings to evacuate and the Government will come get you and give you money for being stupid.

12. Oh, and it is all George Bush's fault, not the mayor's or Governor's.

That is simply not true. An athiest is, by dictionary definition, one who denies the existence of any god(s). He or she may very well have a sophisticated (or simple) system of morals and beliefs that exclude gods.

Your vocabulary needs work. "Atheist" does not mean lack of faith. An athiest HAS faith ... faith that there is no god. One can have faith in his/her ideals, friends, a million things, and still be an athiest.

Jeeze, do y'all speak English or own dictionaries? Athiests DO have faith in
their beliefs, one of which is that there is no god.
>
> Law itself is derived directly from religious thought. If there were

That is so absolutely wrong that it is hard to explain. Dictatorships *do*
have law. Check out Hitler's Germany, Franco's Spain or, more recently
Saddam's Iraq - all with stringent legal codes and none athiestic. OTOH,
there are legal systems, Marxist Russia for example, that had plenty of laws
but denied the existence of any god making them athiestic.

First Crusade:

12,000 Jews killed in the Rhine valley.
6000 killed in Jerusalem when they torched the synagogue there
30,000 Muslims killed at the al Aqsa mosque.
at least 200,000 killed over the length of the crusades.

Then let us not forget the Iquisitions, witch-hunts and other jollies
that went on.

And there is plenty more to go around on all sides. Appears

We're a long way from "a few thousand".

But as the recent poster Mike has noted, this is pretty off topic, so
I'll refrain from any more posting in this thread.

There are no such things as "good" and "evil" or "right" and "wrong".

Except as opinions which depend on the point of view from which an individual may perceive events. Points of view are randomly distributed and depend solely on one's self-interests and one's location in space relative to the crowd.

Self interest is the keyword. But distant events (as most of them are) in time and space are rapidly attenuated in their effects on one's opinion. Which results in most people's opinions being neutral about most things, neither good nor bad.

Which is just the same as saying most people just don't think about things unless things are in their immediately vicinity. People are naturally mentally bone idle. As with all lifeforms, this conserves energy which is always in short supply.

Reg.

Along with a lot of good people as well, same with the Texas coast. So
if God has all this power, why does he have to destroy a city and good
people just to get rid of a few bad ones? Why doesn't he just strike the
bad ones dead? Why use a hurricane?

"Agnostic" is a cop-out word for someone that doesn't want to admit
that they're an atheist. It just sounds nicer. If you say that it's
impossible to know if there is a god or not, you obviously don't
acknowledge the existence of any god. That makes you an atheist.

Hello Cecil,

That's very good advice!

> The objective thing to do is to grant to everyone the rights
> that you require for yourself, no matter what you believe. It
> bears a close resemblence to the golden rule.

Sounds identical to the golden rule to me!

IIRC, a fellow named Hobbes worked out the golden rule by pure logic a couple of hundred years ago.

While Objectivism has some obvious defects and shortcomings, it is well worth studying because it develops a coherent system of ethics with a minimum of reference to unprovable claims.

For example, Objectivism has as one of its basic concepts that each person has certain basic rights as a human being, such as each person owning their own life. All forms of involuntary servitude, except as punishment for a crime, are completely immoral under Objectivist ethics.

Another Objectivist concept is the initial innocence of each person. The concept of inherited guilt, usually called 'original sin' by many religions, is incompatible with Objectivist ethics. How can anyone be held responsible for the actions of a long-dead-before-you-were-born ancestor?

--

Of course a lot of this discussion circles around because of faulty logic and too-loose definitions. For example, what, exactly, is an atheist? What, exactly, is a religion?

Suppose someone believes in God - but also believes that one of God's most basic commandments to human beings is that they *use* their

brains, logic and experiences to know His creation and their purpose in it, and that they must continually question anyone who tells them they must accept anything without proof.

What do you call such a person?

rjvalenta@yahoo.com says...

<snippety>

> Another example would be something like the Motorola Spectra (shown at:
> http://images.batlabs.com/mobiles/speca9.jpg) - but you can't get those
> in dual band.

Ahh... As the owner of a pair of Spectras, and as a tech who works
on them almost every week, I can assure you that their displays are not
"color LCD."

The closest they come is, on the Astro Spectras, a monochrome LCD
panel consisting of 2 lines of 16 characters each.

The standard 'Systems 9000' head is nothing more than a blue VF
(Vacuum-Fluorescent) display tube with 15 segments per character instead
of 7.

While it is true that individual Spectras were never made in a
dual-band configuration, the same functionality was achieved by using
two radio drawers (VHF and UHF), a handheld control head, and a
specialized system interface unit to tie it all together. Such setups
were frequently used by government agencies, most of whom went under
three-letter abbreviations.

Now, with that said... I would be curious to know if you turn up
something along the lines you describe. I'd like to look at it myself.

Happy hunting.

My favorite was a short story years ago called "All the names of God". Seems a group of monks in Tibet or some other eastern place were writing all the possible perturbations of their alphabet.

Having completed the task the universe would end as mans purpose had been fulfilled. At the rate they were going the task would be completed in about another 400,000 years or so... That was until an enterprising computer salesman showed them that with a sufficiently large order from his company, the task could be finished in 3 weeks.

As the end of the run came near, the salesman decided to get out of Dodge, as he did not want to deal with a group of pissed off monks when the universe didn't end. Besides he had a hell of a commision to spend!

The last line was a classic "As he looked out the window of the airplane, silently, one by one, the stars were going out".

Jews do not casually write any Name of God. This practice does not come from the commandment not to take the Lord's Name in vain, as many suppose. In Jewish thought, that commandment refers solely to oath-taking, and is a prohibition against swearing by God's Name falsely or frivolously (the word normally translated as "in vain" literally means "for falsehood").

Judaism does not prohibit writing the Name of God per se; it prohibits only erasing or defacing a Name of God. However, observant Jews avoid writing any Name of God casually because of the risk that the written Name might later be defaced, obliterated or destroyed accidentally or by one who does not know better.

The commandment not to erase or deface the name of God comes from Deut. 12:3. In that passage, the people are commanded that when they take over the promised land, they should destroy all things related to the idolatrous religions of that region, and should utterly destroy the names of the local deities. Immediately afterwards, we are commanded not to do the same to our God. From this, the rabbis inferred that we are commanded not to destroy any holy thing, and not to erase or deface a Name of God.

It is worth noting that this prohibition against erasing or defacing Names of God applies only to Names that are written in some kind of permanent form, and recent rabbinical decisions have held that writing on a computer is not a permanent form, thus it is not a violation to type God's Name into a computer and then backspace over it or cut and paste it, or copy and delete files with God's Name in them. However, once you print the document out, it becomes a permanent form. That is why observant Jews avoid writing a Name of God on web sites like this one or in BBS messages: because there is a risk that someone else will print it out and deface it.

Normally, we avoid writing the Name by substituting letters or syllables, for example, writing "G-d" instead of "God." In addition, the number 15, which would ordinarily be written in Hebrew as Yod-Heh (10-5), is normally written as Tet-Vav (9-6), because Yod-Heh is a Name. See Hebrew Alphabet for more information about using letters as numerals

But "God" is a title, not a name. There's God Yahweh, God Jehovah,
God Jesus, God Allah, God Ra, God Thor - to name just a few.

It's quite possible, at this stage of the art, for a female to have a
virgin birth. Even a clone of herself.

A male's sperm is unecessary and is redundent.

In the near future it may need male doctors to do what is necessary.
When females can organise things the situation will slightly change.
Males will be entire redundent except for recreational purposes. They
will then fade away into history.

But all this will not solve the problem of the illegal occupation of
Iraq.

Reg.

4580. RFI: decent HT for MARS/CAP mod

Currently have a Yaesu FT-50R, which was fairly easy to modify for TX from 144-159 and 420-470. However, this great little unit was apparently discontinued. Is the FT-60R or VX-6R just as simple to mod? Or am I better off picking up a used FT-50R off ebay?

Haven't looked at the market offerings in a few years. Are there any other dual band HTs to consider that are also: reasonably rugged, can use AA batteries, 5 watt TX option, interchangeable antena, not overly complex.

I have a VX-6 and I know it can be modded. Behind the battery there's
a plastic adhesive cover (officially, I think, for a barometer accessory
or something). There are some solder blobs to remove (or change).

I think this page explains it: http://www.mods.dk/view.php?ArticleId=3170

Greetings!

If you liked that bit, and if you ever studied Latin, this bit may
interest you:

--

CENTURION:
What's this, then? 'Romanes Eunt Domus'? 'People called Romans they go
the house'?

BRIAN (terrified, having just been caught writing graffiti on the Roman
palace wall):
It-- it says, 'Romans, go home'.

CENTURION (puzzled):
No, it doesn't. What's Latin for 'Roman'? Come on!

BRIAN:
Aah!

CENTURION (grabs Brian, holds him in a headlock):
Come on!

BRIAN:
'R-- Romanus'?

CENTURION:
Goes like...?

BRIAN:
'Annus'?

CENTURION:
Vocative plural of 'annus' is...?

BRIAN:
Eh. 'Anni'?

CENTURION:
'Romani'. 'Eunt'? What is 'eunt'?

BRIAN:
'Go'. Let--

CENTURION (twists Brian's arm):
Conjugate the verb 'to go'!

BRIAN:
Uh. 'Ire'. Uh, 'eo'. 'Is'. 'It'. 'Imus'. 'Itis'. 'Eunt'.

CENTURION:
So 'eunt' is...?

BRIAN:
Ah, huh, third person plural, uh, present indicative. Uh, 'they go'.

CENTURION:
But 'Romans, go home' is an order, so you must use the...?

BRIAN:
The... imperative!

CENTURION:
Which is...?

BRIAN:
Umm! Oh. Oh. Um, 'i'. 'I'!

CENTURION (draws short sword, holds to Brian's throat):
How many Romans!?

BRIAN:
Ah! 'I'-- Plural. Plural. 'Ite'. 'Ite'.

CENTURION:
'Ite'.

BRIAN:
Ah. Eh.

CENTURION:
'Domus'?

BRIAN:
Eh.

CENTURION:
Nominative?

BRIAN:
Oh.

CENTURION (continuing to threaten):
'Go home'? This is motion towards. Isn't it, boy?

BRIAN:
Ah. Ah, dative, sir! Ahh! No, not dative! Not the dative, sir! No! Ah!
Oh, the... accusative! Accusative! Ah! 'Domum', sir! 'Ad domum'! Ah!
Oooh! Ah!

CENTURION:
Except that 'domus' takes the...?

BRIAN:
The locative, sir!

CENTURION:
Which is...?!

BRIAN:
'Domum'.

CENTURION:
'Domum'.

BRIAN:
Aaah! Ah.

CENTURION:
'Um'. Understand?

BRIAN:
Yes, sir.

CENTURION:
Now, write it out a hundred times.

BRIAN:
Yes, sir. Thank you, sir. Hail Caesar, sir.

CENTURION:
Hail Caesar. If it's not done by sunrise, I'll cut your balls off.

Or maybe you prefer this one:

--

REG:
And what have they ever given us in return?!

XERXES:
The aqueduct?

REG:
What?

XERXES:
The aqueduct.

REG:
Oh. Yeah, yeah. They did give us that. Uh, that's true. Yeah.

COMMANDO #3:
And the sanitation.

LORETTA:
Oh, yeah, the sanitation, Reg. Remember what the city used to be like?

REG:
Yeah. All right. I'll grant you the aqueduct and the sanitation are two things that the Romans have done.

MATTHIAS:
And the roads.

REG:
Well, yeah. Obviously the roads. I mean, the roads go without saying, don't they? But apart from the sanitation, the aqueduct, and the roads--

COMMANDO:
Irrigation.

XERXES:
Medicine.

COMMANDOS:
Huh? Heh? Huh...

COMMANDO #2:
Education.

COMMANDOS:
Ohh...

REG:
Yeah, yeah. All right. Fair enough.

COMMANDO #1:
And the wine.

COMMANDOS:
Oh, yes. Yeah...

FRANCIS:
Yeah. Yeah, that's something we'd really miss, Reg, if the Romans left. Huh.

COMMANDO:
Public baths.

LORETTA:
And it's safe to walk in the streets at night now, Reg.

FRANCIS:
Yeah, they certainly know how to keep order. Let's face it. They're the only ones who could in a place like this.

COMMANDOS:
Hehh, heh. Heh heh heh heh heh heh heh.

REG:
All right, but apart from the sanitation, the medicine, education, wine, public order, irrigation, roads, a fresh water system, and public health, what have the Romans ever done for us?

XERXES:
Brought peace.

REG:
Oh. Peace? Shut up!
[bam bam bam bam bam bam bam]
[bam bam bam bam bam]

But for sheer force of irrefutable argument, you can't beat Douglas Adams' piece about the Babelfish as proof of the nonexistence of God, as quoted from Oolon Collophid's book.

OTOH you may say it's all just a load of dingo's kidneys.

73 de Jim, N2EY

If we're one nation "under god", which god is it?

This is what Michael Newdow should have asked the Supreme Court last
year. Too bad the court weaseled their way out of a ruling based on
the child custody issue.

First off I have read all the eHam reviews.
Second since these headsets sample ambient noise I wonder if it would have
any detrimental affect on vox operation?

Yes, and so did those bread-eaters. Ergo, bread-eating is bad for you.

First of all, atheism is non-belief in deities. That's it. Anything else you're adding to this concept is your own projection.
Second, you're equivocating and word-playing on the term "belief". What beliefs are we talking about in atheism? Atheists don't believe in gods - a lack of belief is not belief any more than baldness is a hair color.
So, then, what beliefs? When you define this I'll "counter the argument"

>>>I do not deny that both are fallible, however, history demonstrates
>>>that the religious, despite their failures, have improved the human
>>>condition immeasurably where atheists have been only a blight upon
>>>civilization.
>>
>>??? You have got to be kidding? What has religion possibly done for
>>anyone except provided false hope while stealing their money?
>
> Law itself is derived directly from religious thought.

Sometimes is, sometimes isn't. In the primitive tribal societies it was much simpler to rule lawless people if you told them some god passed a certain law and it just so happens that you have a direct communication line with that god, so that you can interpret it. This is how religions got born, and by a curious coincidence they all demanded money from their followers.
Now, show how, for example, the American legal system is derived from religion. Point out the law that makes it illegal to "covet one's ass" or to eat shellfish or to wear clothes made from two different fabrics.

> If there were no belief system, there could be no law.

??? Look, just pulling statements out of your ass does not make them believable. If you want to convince people, you have to present arguments in a coherent way.

What is so difficult about law anyway? Does it really take a genius to figure out that murder, rape, slavery, genocide and theft are detrimental to a society? We need some book written by ancient goat-herders to tell us what laws are supposed to be? Besides, where, for example, does the Bible say that slavery is wrong? Oh, that's right, it doesn't - as a matter of fact, it explicitly condones it. It also condones genocide, rape, infanticide and all sorts of other behavior that nowadays is considered uncivilized (albeit only when perpetrated by the God's chosen people against infidels). Strangely enough, there is no mention of abortion in the Bible whatsoever, while one of the two wildly different versions of the Ten Commandments deals with God's humongous vanity.

> Dictatorships have no law, that's what makes them so awful.

??? You're not serious, are you?

>>Stifling science (from Galileo to stem cells), witch burning, condoning

Yes, I agree that most of them succeed in their primary purpose, which is allowing a class of social parasites to live off the gullible. From Christianity to Scientology. The ultimate Ponzi scheme.

> atheism.

This is false dichotomy. Also, as I said before, atheism is simply non-belief in gods. It does not prescribe any morals, ethics or behavior. Furthermore, if you claim that our morals are based on your scriptures, and if I then go through that "holy" book and find a contradictory example then it should be obvious that your argument falls apart. So if your Bible explicitly condones rape and slavery, how do you reconcile this with your religion-derived morals, other than through cognitive dissonance?

According to you, all atheists should be immoral by definition. It follows that prisons should be overflowing with them. Yet, strangely enough, in American prisons, Christians are over-represented, while atheists (along with Jews and Muslims) are under-represented.

Hmm, do I smell a true Scotsman fallacy coming up?

Most convicts get "religion" because it looks good for the parole board.

The reason Jews are under represented is the high value placed on education by the Jewish culture. A lesson lost on the ghetto dwellers in spite of the fact the early civil rights fight was for an equal education.

As long as niggers equate education with "acting white", they will enslave themselves far more effectively that any plantation Massa of pre War of Northern Agression times.

Once a group learns education opens the doors of opportunity, they are truly free.

Your desperate grasping at straws to support atheism indicates to me, a crying out on your part for someone to lead you to the path of understanding. I shall pray for you my friend.

Even if you do not believe in God, he believes in you!

Your sheet is showing, Fred. It's hard for rational beings to
believe in undemonstrable phantasms, but even believing, it's even
harder for any rational being to see how anyone could worship
a mass murderer, as God has proven himself to be over the years, and
still be moral. Morality transcends Christianity because truly
moral people know that belief does not justify the committing of
atrocities, a simple fact lost on most Christians over the millennia.
73,
Tom Donaly, KA6RUH

A college professor, an avowed atheist and active in the ACLU, was teaching his class. He shocked several of his students when he flatly stated that for once and for all he was going to prove there was no God. Addressing the ceiling he shouted: "GOD, if you are real, then I want you to knock me off this platform. I'll give you exactly 15 minutes!!!!!"

The lecture room fell silent. You could hear a pin drop. Ten minutes went by. "I'm waiting God, if you're real knock me off this platform!!!!"

Again after 5 minutes, the professor taunted God saying, "Here I am, God!!! I'm still waiting!!!" His count down got down to the last couple of minutes when a Ranger, just released from the Army after serving in Afghanistan and Iraq and newly registered in the class, walked up to the Professor.

The Ranger hit him full force in the face, and sent the Professor tumbling from his lofty platform.

The Professor was out cold!! The students were stunned and shocked. They began to babble in confusion. The Ranger nonchalantly took his seat in the front row and sat silent. The class looked at him and fell silent waiting.

Eventually, the professor came to and was noticeably shaken. He looked at the Ranger in the front row.

When the professor regained his senses and could speak he asked: "What the hell is the matter with you?! Why did you do that?" "God was really busy protecting America's soldiers, who are protecting your right to say stupid things and act like a jerk !!! So he sent me!!"

1. I generally don't like discussing anything with neo-Nazis, because
their ideology is even more irrational than any superstition.

2. I don't see any straws in my arguments and atheism is a default
state. Children have to be indoctrinated in order to become theists.

3. Your "praying for me" has as much effect on me as a wiccan's
proclamation that he will burn chicken bones at midnight for you would
have on you.

When I was a young feller, I recall many stories in bible class about good Christians who defied the law to do the right thing. I thrilled to stories about Christians who defied the Nazi's to protect Jewish people who would be otherwise killed, about brave Christians who managed to survive in Communist China. Lots of wonderful inspirational stories about religious conviction and character.

My how Christianity has changed! Must be a strong religion that won't go against an HOA.

What has this got to do with atheism? I still don't see any faith or
belief in *not* believing that a magic supernatural dude created
everything. Not believing supernatural and paranormal concepts is a
default state. If you want to convince me or anyone else about your
extraordinary claim, you have to provide extraordinary evidence. Simply
saying "it is so because I say it is so" does not cut it.

And? Once again, what has this got to do with anything? The fact that
some laws coincide with *some* biblical or other religious "laws" does
not show that either morality or law are in any way related to the
so-called religious absolute morality.

Nevertheless, this just shows that humans, with their overdeveloped
brains, are capable of irrational, in addition to rational, thinking.
Just because humans are capable of imagining a god that makes thunder or
a god that makes the Universe or a jolly old man that brings presents,
doesn't mean they exist.

Governments, much like armies, for all their faults and problems, are a
necessary evil, unless one advocates anarchy as a solution. Religion is
not.

The straw is that there seems to be something in human nature that
needs to believe in a higher power. Myths and religion wouldn't
exist unless they fulfilled some need. One reason that we are more
successful than our ape cousins is that we can control the bullies
in our society. Religion helps to accomplish that control.

On the contrary, human imagination brings lots of concepts into
existence. Your words, above, are just one example. Your word,
"god", represents a concept that does indeed exist. "Love" is
another concept that exists although I have never seen a drop
of love.

Hi Mike,

Perce was commending me (or so I read the reply to my post, which had
quoted Fred's top post (which makes attribution complex)).

Either way, what is more amusing is the anal-retentive attention given
to forcing the metaphor of the Camel to come out "correctly" by
successive writers and critics (thus proving it is easier to go to
hell through accuracy than get to heaven with style). Of course, none
of this matches the absolutely amateur religious instruction on what
constitutes an atheist - again, the toboggan run to hell paved with
definitions, examples and references reaching back to the dawn of the
crusades as proof.

Style is found in:
"Now I saw in my dream that Christian and Hopeful forsook Mr. By-ends,
and kept their distance before him; but one of them looking back, saw
three men following Mr. By-ends, and behold, as they came up with him,
he made them a very low bow; and they also gave him a compliment. The
men's names were Mr. Hold-the-world, Mr. Money-love, and Mr. Save-all;
men that Mr. By-ends had formerly been acquainted with; for in their
minority they were schoolfellows, and were taught by one Mr.
Gripe-man, a schoolmaster in Love-gain, which is a market town in the
county of Coveting, in the north. This schoolmaster taught them the
art of getting, either by violence, cozenage, flattery, lying, or by
putting on the guise of religion; and these four gentlemen had
attained much of the art of their master, so that they could each of

them have kept such a school themselves.

"Well, when they had, as I said, thus saluted each other, Mr. Money-love said to Mr. By-ends, Who are they upon the road before us? (for Christian and Hopeful were yet within view).

"BY-ENDS. They are a couple of far countrymen, that, after their mode, are going on pilgrimage.

"MONEY-LOVE. Alas! Why did they not stay, that we might have had their good company? for they, and we, and you, Sir, I hope, are all going on pilgrimage.

"BY-ENDS. Why, they, after their headstrong manner, conclude that it is duty to rush on their journey all weathers; and I am for waiting for wind and tide. They are for hazarding all for God at a clap; and I am for taking all advantages to secure my life and estate. They are for holding their notions, though all other men are against them; but I am for religion in what, and so far as the times, and my safety, will bear it. They are for religion when in rags and contempt; but I am for him when he walks in his golden slippers, in the sunshine, and with applause."

Auditions for readings follow this posting.

Not at all, I keep saying, and you refuse to hear it, that I d-o n-o-t
b-e-l-i-e-v-e i-n y-o-u-r g-o-d-s. Any of them.

Once again, absence of belief is not a belief. Let me illustrate:
suppose that someone accuses you of being a witch. He has no evidence,
other than he believes he saw you kill someone's cow with a spell. Now,
you obviously don't "believe that you're not" a witch, do you? It would
seem that his claim needs evidence/proof and you have nothing to believe
in and nothing to prove.
So now you're saying that his belief and your "belief" are somehow similar?

> What you seem to be doing is standing on soap box and claiming that

> religion. Atheism, in other words doesn't exist, it cannot exist in
> any real sense. Rather than I proving that an elephant can't fly, why
> don't you prove that it can?

Why don't you prove that your gods, devils and angels exist first, before engaging in the standard theist shifting of the burden of proof. If you have nothing to show for your gods other than the usual begging the question and other logical fallacies, then I don't have to entertain your hypothesis with any more seriousness than the hypothesis that the Universe was farted out of the Super-Nuclear Donkey's butt yesterday afternoon.

Either way, Matt, you keep spinning the old tired religious nonsense about atheism being just another theism, because that's pretty much the only thing they can say on the matter, other than engaging in the ad hominem about atheists' immorality, that is.

However, none of this would matter one bit and I would care about Christianity as much as I care about some Amazon tribe's river gods, if it weren't for the fact that the religious right affects my life in the profoundly negative way, and the list is getting longer by the day: health research, contraceptives, euthanasia, abortion, education, politics, freedom of expression, "morality" laws, taxes, phony illegal wars, etc.

Americans have almost absolute freedom to practice their religion in their homes and in their churches as they please, but that is never enough for the Christian Taliban, is it? They won't be happy until this country becomes a Christian Saudi Arabia.

I am not arguing that the *concept* of a god does not exist. I am arguing that in the absence of any evidence of the existence of the alleged gods, as well as considering the preponderance of scientific evidence contrary to all known religious scriptures, it is silly to believe in any of them. And why? Because some 5000 year old goat-bugger had too much to drink one day while trying to figure out stuff no one will ever know.

What difference does it make what I "believe"? When it comes to blind faith in the supernatural and paranormal, I believe none of it until it can be scientifically repeated, falsified and explained. Other than that, I believe the Sun will rise tomorrow and I believe in peace and love, and I believe I'll have a beer. But please don't go confusing these three "beliefs" with the belief in the supernatural. This is the equivocation game and it's dishonest.

> Atheism is a logically faulty concept. Being human, you cannot
> possibly know everything.

What difference does this make? I don't know how the Universe began and quite possibly no one will ever know exactly, but does that mean we can simply pull the "answers" out of our asses? I am not playing the god of the gaps game either. That's just stupid.

> What you may think of the unknown is
> entirely up to you, but whatever that may be, will require just as
> much faith as any other religion. Your religion simply has different
> trappings.

[sigh] I suppose it's hopeless.

You keep blindly repeating what your voodoo practitioners told you, and are unwilling to accept that atheists get to define what atheism is - not you. So feel free to believe (no pun) that atheism is religion or that atheists "deny" God, but I am telling you that the only thing that atheism is, is the absence of belief in gods. Period.

And to everyone's relief, this will be my last post. Whoever wants to follow up is free to transfer the discussion to alt.atheism, soc.atheism or talk.atheism.

==========

It is unfortunate that Hollywood so long has dominated the world's supposedly desirable standards of human behaviour and described, by countless examples in films, the ficticious and imagined way of life in the USA. But the truth about real life went to pot after Charlie Chaplin and others were expelled from your shores.

Things may be different now that the Japanese wealth and enterprise have taken over Hollywood. But perhaps it is too late. The Internet, not Hollywood, is taking over the dissemination of ideas. Big Brother Rules!

They who own and control the means of communication will rule the Earth.

Makes a change from so-called SWR meters.

Reg, G4FGQ.

If an atheist believes only in things that can be proven using
the scientific method, he is the *exact opposite* of a religious
person who substitutes blind faith for scientific inquiry.

> Atheism, in other words doesn't exist, it cannot exist in
> any real sense.

This is known in scientific logic as begging the question. The
onus of proof is upon you to first prove that a supreme supernatural
being exists. Only after you accomplish that scientific feat of
classic logic would you be in a position to discuss the implications.

> Rather than I proving that an elephant can't fly, why
> don't you prove that it can?

The onus of proof is upon the person who asserts the positive
premise which is: "God exists." Until you prove your premise, all
of your arguments are easily recognized as logical diversions.
Therefore all of your statements must be prefaced with:
"If and only if my particular God exists, ...".

If the existence of God were ever proven beyond a reasonable doubt
and atheists continued to disbelieve, then atheism would become a
religion, but not before.

Matt Osborn wrote:
> You have made no case for atheism.

Not that I'm an atheist, but here is the case for atheism: The
existence of even one of the following as a supernatural being
has never been proven.

Allah, Aphrodite, Ares, Athena, Apollo, Artemis, Babaluaye,
Bacchus, Baldur, Bast, Bellona, Brahma, Brigid, Ceres, Cupid, Cerridwen,
Demeter, Diana, Dione, Dionysus, Eris, Eos, Eleggua, , El Shaddai,
Elohim, Eshu, Ereshkigal, Frigga, Frey, Freya, Gaea, Lord Genesa, Hades,
Hebe, Hera, Helios, Hel, Hephaestus, Hermes, Hestia, Horus, Ibeji, Ifa,
Inanna, Indra, Ishana, Ishtar, Isis, Janus, Juno, Jehovah, Jove,
Jupiter, Kali, Krishna, Kronos, Korravai, Loki, Lugh, Lord Indra,
Manitou, Mars, Mercury, Minerva, Mercurius, Morrigan, Nahuiquiahuitl,
Nanahuatzin, Nephthys, Neptune, Obatala, Odin, Ogun, Oshosi, Oshun,
Osiris, Oya, Orunmila, Olokun, Olodumare, Pluto, Persephone, Poseidon,
Proserpina, Quetzalcoatl, Ra, Lord Rama, Rhea, Saturn, Set, Selene,
Shango, Lord Siva, Tammuz, Thor, Tir, Tiw, Uranus, Venus, Vesta, Vishnu,
Vesta, Vulcan, Wotan, Yahweh, Yemaya and Zeus

Even the very existence of a supernatural dimension or realm has never
been proven.

Religion is based on blind faith and beliefs in things that cannot be
proven. Atheism is based on an absence of blind faith and beliefs in
things that can be proven beyond a reasonable doubt.

False. Certain characteristics of entangled particles are
completely random and must remain so in order to avoid faster
than light transfer of information, something presently
considered to be impossible. Can your G-d communicate at
faster than light speeds?

> Atheists are no different than the religious, they, as do the
> religious themselves, simply believe in different things.

False. The absence of a belief is the exact opposite of the
existence of a belief. By your logic, the absence of a tree
is exactly the same thing as the presence of a tree. Methinks
you picked the wrong newsgroup to try to flim-flam. Are you
an EH antenna salesman by any chance? :-)

There are some atheists who say that there is no god, and there are others who say that the existence of any god can neither be proven nor disproved. Either way, those asserting a belief in a god have the burden of proof. It's not up to atheists to prove that a god does not exist. Of course, you are correct when you say that humans cannot possibly know everything, but to accept a concept such as "god" is applying faith without any critical thinking or reason. This is blind faith.

Of course, if you paint with that broad of a stroke, faith can mean
just about anything you want it to mean. To say that atheists have
"faith" in their beliefs or that such beliefs are actually a religion
is flawed. I can assure you that if some winged being flew down out of
the sun and ended all disease, suffering, and hunger, and brought
peace to the world, and if every person in the world called this being
"god" in their own native tongue, I guarantee even the most hardcore
atheist would have faith in that god.

>BTW, despite the allegations, there is no conflict between science and

FS Icom IC-32AT Dual Band 2/440 HT, BC-35 Rapid Desk Charger, IC-DC1 DC
Adaptor, HM-46 Speaker Mic, 4 Batteries(Weak), needs Battery or rebuild old
ones,
This is a 7 watt HT when 12 Volts DC is used to power it. It works great
except that
the Tones do not seem to work. It has a Tone Board as standard equpiment,
but I can't
bring up repeaters requiring tones. Otherwise it is i nice shape.Copy of the
Manual, Price $85
shipped in lower 48. Thanks, Charlie Hugg, K5MBX

I've always loved that statement "Live Free or Die". Good for New Hampshire!! I would've done well in New Hampshire!

Like you, I made 2 requirements. 1) No HOA's. and 2) No "heat" pumps!! I know it gets colder in NH, but it CAN get a bit chilly here in Western NC. I won't have cold air coming out of my registers! LOL! And that, of course, is a story for a different thread!

Can anyone out there help with a slight problem? I have in my posession an AM-1180/GRC 100w FM amp, 50-100mhz. When i purchased it years ago it came with a schematic, which showed what voltages it needed where in order to operate. Anyone have experience with this type of unit? It uses a 4x150a power tube, and one hellacious roller inductor and capacitor.

I would either like to use it or sell it, but in either case i need a schematic.

I was taught as a child to help others. I have lost count of the things I've done for family, friends and strangers without asking anything in return. I have also had others help me when the tables were turned. They have fed me, given me rides, or paid so I could see a doctor after I was fired for being unconscious for five days with the flu. It works both ways. Today, I am 100% disabled, and only able to work a couple hours a day so I spend most of that time collecting and repairing donated computers for the local "Vets Helping Vets" group, who gives them to other disabled vets who are unable to afford a computer. It gives me something to do, and still helps others. I have offered to help the hams around here to repair their equipment, but they dismissed my offer because I don't have a amateur radio licensee. Its their loss. I have a well equipped shop here at home, and a good stock of parts going to waste. I guess working on a 195 UHF KW transmitter or building commercial microwave equipment isn't good enough for them? It doesn't matter to me anymore. I'll keep restoring early amateur and general coverage receivers as long as I'm able to prop myself up at one of my benches. My current project is a National NC-183R that is taking way too long to restore because it was butchered by an EE with too much time on his hands. There are huge wads of capacitors taped together with wires running everywhere under the chassis so I will make sure I have every part before I clean up that mess.

4688. FS Hazer H-3 to Belton, Texas

Newsgroup: rec.radio.amateur.equipment
Date: 2005-09-27 17:14:16 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <z5f_e.87449$7f5.18295@okepread01>
Source record: 13161

I have a Glen Martin Hazer H-3 Standard duty aluminum hazer system for sale. This is the model that fits the Rohn 20 and 25g Towers. This one is almost new and is complete. A winch can be purchased as an option from AES for $80, but cheaper ones can be found at most any hardware stores. AES sells the H-3 alone for $274 plus $26.99 extra for the rotor plate. I am asking $125 and I will deliver it to the Belton, Texas Hamfest this weekend.Thanks, Charlie Hugg, K5MBX

Here's an interesting study on the subject, it says:

http://www.timesonline.co.uk/article/0,,2-1798944,00.html

"RELIGIOUS belief can cause damage to a society, contributing towards high murder rates, abortion,
sexual promiscuity and suicide, according to research published today.

According to the study, belief in and worship of God are not only unnecessary for a healthy society
but may actually contribute to social problems.

The study counters the view of believers that religion is necessary to provide the moral and ethical
foundations of a healthy society."

The conclusions he draws are a convolution of logic.

1. The US is a religious country.
2. The US has a high murder rate
3. The US has a high rate of VD, drug use, and aids.

He concludes that statements 2 and 3 are caused by statement 1.

Utter nonsense, at the risk of upsetting liberals I would suggest that 2 and
3 can can more easily be tied to minorities than religion.

Son, I SAY, Son! I ain't no chicken! Now that over there, THAT's a
chicken!.........

Actually, Ol' Foghorn is probably not the problem. There are a number
of old WB cartoons that have some rather strong stereotype of the folks
we were fighting during WWII (the big one) Considering that they are now
our allies, there might be a little sensitivity thing going on.

Personally, I think they should be shown, especially when introduced in the proper context. They are of historical value, and in the context of the times, were understandable.

Oh - and they were darn funny too!

I used this for my sig file for a while: "I say, the boy is so stupid
that he tried to make a back up copy of his hard drive on the Xerox
machine!" It took a couple months before someone asked if it was

supposed to be Foghorn. :(Talk about big gaps in the modern
educational system!

I wouldn't doubt it. The stronger the religion, the worse the evils
have to be. They are partners. One must have the other.

There was a series a few years ago, called "The Pagan Invasion". It was
broadcast on one of the national Religion channels. I used to watch it
because there was some pretty decent 3-D animation in it. (for the time)
But when you saw what those folk believed in, it was downright scary.

If those folk were to come into power, there is no doubt that the Salem
Witchcraft trials would be a role model for government.

Absolutely. I don't support money going to rebuilding NO in it's present spot.

The French Quarter is okay where it is. It will eventually become an island, and should last for quite a while yet. Seems like a charming way to get to Mardi Gras - by a boat.

But no matter how much money we pour into th erest of NO, it will sink. I suppose that we could try a Netherlands type approach, with huge dikes and all, but I doubt that there is enough room on the sides to do that, and besides, the Netherlands doesn't have to worry about hurricanes either.

Is there a way to correct the frequency from those menu items. I would like to have a more accurate frequency on my VHF frequencies.

Or, is there an explanation for setting the frequency internally. so the dial
would read correctly.

Thanks

I wonder why they don't rebuild New Orleans the way they built Venice,
Italy. Venice was built by people who were trying to get away from
Attila the Hun. Attila wanted farmland, so the nomads of that area
fled and settled in what was a swamp, and they built a city on a
swamp.

(Of course, the first one sank into the swamp, so they built a second
one. THAT one sank into the swamp, so they built a third one. THAT one
burned down, fell over, and then sank into the swamp...but the fourth
one stayed up!)

Seriously, though, New Orleans as a city of canals has a certain
romantic flair to it.

Yes. Pages 4-1 and 4-2 of the Service Manual detail exactly how to
set the PLL reference frequency to 60.000000 MHz. You will need a DVM
or O'Scope, an RF voltmeter and a counter with a frequency accuracy of
+/- 1 part per million.

> hurricanes either.

The levees are dikes, aren't they?

There are some important other differences.

It's my understanding that the Dutch built their dikes and filled
in/pumped out the polders as a way of getting more farmland without
fighting wars with their neighbors, and as a way of *reducing* storm
damage. They don't build cities on below-sea-level land. And the way
they deal with the reclaimed land results in it slowly but surely

rising, not sinking.

But they don't put cities there.

--

There's a bigger problem even than Katrina behind all this...

Modern technology has made almost anything possible from a theoretical point of view. NO could be rebuilt with levees and pumps capable of withstanding a Cat 5 storm, for example.

But the problem is that such solutions, while technically possible, are often prohibitively expensive, particularly on a large scale. Not just to build, but to maintain. Who is going to pay the taxes so that a rebuilt NO can be kept dry?

Or to put it another way - *why* should NO be built in such a highrisk location when there are so many better alternatives?

Just because something can be done doesn't mean it should be done.

I wonder if Shrub ever played SimCity?

Some of the lower forms of American Christianity try to separate faith
and works. That allows them salvation without substance, the lazy man's
path to life without end.
My last two sentences are statements of truth, not a logical
progression. Each has to be taken alone, by itself. (A religious
fundamentalist insisting on logical consistency constitutes a
pretty good joke.) Let me repeat: Those who do no good have no
faith. Next time you and your friends are sitting around speaking
in tongues, you should discuss this. Maybe, if you all think real
hard, together, you can puzzle out what it means.

Tom if what you say is true about no works = no faith and subsequently no salvation...where were the good works from the thief on the cross who, according to Christian scripture, was saved and is already in heaven?

What pisses me off about your posts is this almost deliberate attempt to obfuscate by equivocating, word playing and substituting terms which are incompatible. You keep doing it in almost every post and it gets tired fast. Like, for instance, in the example above: "plenty of evidence but no proof" is meaningless drivel. Of all the scientific disciplines, only mathematics deals with proof. Others, physics included, deal with evidence which is derived from a direct or indirect observation of certain phenomena and is the basis for a theory, such as the gravitational theory, for example.
Therefore, to say that there is "no proof" for gravity is gibberish, even in the solipsist sense.

73 .... WA7AA

P.S. I am dying to hear some "evidence" of what you call "G-d". I am sure the Nobel committee would be interested as well.

I can answer that one..

One of the thieves was reportedly cussing and making fun, challenging
Him to prove He was better than they were. The "good thief" told the
"bad thief" to be quiet, because while they deserved what they got, He
had done nothing wrong. Then the "good thief" asked to be remembered.

It may not seem like much of a "good work", but it was all the good
thief could do. His faith came very near the end of his life.
But what about those whose faith comes much earlier in life?

The Netherlands version of dikes are to levees as a FT-9000 is to a
Rock Mite. I watched a documentary on the things once, and they are
quite a feat of engineering. They are considered one of the seven
woncers of the modern world.

http://geography.about.com/library/weekly/aa033000a.htm

According to this link over 60 percent of the population if the
Netherlands is living beneath sea level.

Actually, something that we call gravity undeniably exists. While our
understanding of it is incomplete, there is no doubt that it exists. It
is there, we see what happens if we drop someting in an area where
"gravity" is strong, and in areas where it is virtually nonexistant.

The "proof" if you will, is in the explanation and understanding of
what we call gravity, not it's existance.

Now God on the other hand, gives no real evidence at all for existence.
Miracles are manifestations of chance, and many things that were once
attributed to divine intervention have found ready explanations after we
learn more about the universe.

So the statement was incorrect in the first place.

WHAT MODEL WAS THAT?
Sure made Mom holler when I made it squall!

I'd love to have one now. Closet thing I spect would be the TenTec Kit

I think you mean the Ocean Hopper. Including LW and BCB, there were a total of six coils. They show up on eBay pretty regularly, but the bidding for nice ones often goes over $100.

Death Valley is not a good place to build a town. Most sub-sea level
locales are really bad places to build, whether there is a flooding
danger or heat issues.

My assumptions do not negate the existence of gravity, whether those assumptions are right or wrong. It exists, it's effects are measurable and known, and it has a profound daily influence on our lives. Quite quantifiable.

How much of Death Valley is not below sea level?

From http://hypertextbook.com/facts/2000/MichaelLevin.shtml

The hottest temperature on Earth ever recorded most likely occurred in
Death Valley, California during 43 consecutive days between July 6 and
August 17, 1917. During those days, the temperature was over 48
degrees Celsius (120 degrees Fahrenheit). The national weather service
recorded 56.7 ï¿½C (134 ï¿½F). The date reported there was July 10, 1913.

The elevation in the lowest point is 86 meters below sea level.

Anyone recently seen an old (40s or so) copy of the Stephen
Foster Songbook? Nearly every facing page with a sketch of happy,
carefree, little darkies, havin' a wunnerful time, singin', dancin'
and playin' their fiddles.

This is called Nihilism - but with your bets hedged in case you are
wrong (which, of course, is Narcissistic, an amusing contradiction).

>From the OED:

The OED is fine if you include the historical tag citations,
contemporary dictionaries (unless you are arguing from the perspective
of a 19th century monk) allow:

1. An extreme form of skepticism that denies all existence.
2. A doctrine holding that all values are baseless and that nothing
can be known or communicated.

>>>So in what context do we contain poorly understood rules and
>>>perceptions? How do we speak of them?
fits perfectly fine in the second context and dovetails with your
rather amorphous logic. In fact, this second usage is almost your
manifesto here - with the aforementioned insurance policy against
damnation.

I "improved" my Ocean Hopper by converting it from vacuum tubes to a
JFET regen stage and a bipolar AF amplifier.

I got a replaement OH to go along with my Space Spanner, Span Master,
Explor-Air, and GR-81.

The spectra VF display has been addressed by others here. My comment is regarding your search for an "inconspicuous" control head / display.

Are you aware that most of the LCD backlit displays have a DIM feature which will in essence turn the back light off completely? Of course the info displayed will not be visible either, but simply adjusting the DIM display momentarily when you need to see the display might work for you.

Also, some of the new small HF - VHF - UHF rigs do have color TFT displays..... I know the new Icom IC-7000 is probably something that would fit your bill, even though it does HF too:

Since you've already ordered it, you're a bit late asking for this info, aren't you? :^)

I really like mine as a portable rig when camping... but I wouldn't suggest it be purchased as a primary HF rig for a home station.

You can get a tremendous amount of info on it at the Yahoo groups email reflector and at numerous FT817 websites. Happy hunting.

>Simply avoiding the question? Your blindness hinders me not.

Hi Matt,

The question?

"What is 6 times 7?"

Any question is certainly not on your horizon for discussion. Its
nebulous generality is not an invitation to discuss, it is a prelude
to a projected negative assertion made in terms of frustration.

If you are not hindered, you could have been more explicit. This
should be quite apparent.

The Span-Master was an excellent regenerative receiver for its time. It
not only boasted of band switching from the broadcast band to 30 MHz, it
also included a "fine" regeneration control that made those critical
peaking adjustments made easy. My buddy had one during the early 60's
and we had a blast listening to everything from am broadcast to C.B.

It was very well designed.

That is why it is sought after today.

4797. 2 new Mo'Slos

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-01 04:57:43 UTC
From: "Dr.David" <please.reply@web.site>
Message-ID: <bHo%e.4050$KQ5.685@newssvr12.news.prodigy.com>
Source record: 13070

I've developed two new Mo'Slo products with RSS in mind. Not enough feedback yet to make specific recommendations, but Mo'Slo Deluxe, with cache disabling, reportedly runs much of the DOS-based Motorola RSS on some systems.

The Mo'Slo basic v.1.5 eval has two slowdown methods and a 0.01% slowdown increment.

Mo'Slo Deluxe v.3.1 has three slowdown methods, 0.01% slowdown increment, cache disabling, much-improved keyboard control, etc.

The new slowdown methods can reduce heat and power consumption in real mode DOS (which is what they were developed for, though method 2 does slow more than a few DOS programs in Windows).

Details and eval download at http://moslo.info

Best regards,
Dr.David

>Patience is too valuable to waste.

Art of the classics speaks to the soul; without it, this muttering of
philosophy simply stirs the dust in the mind.
>> I saw, moreover, in my dream, that the Interpreter took him by the hand,
>>and had him into a little room, where sat two little children, each one in his chair.
>>The name of the eldest was Passion, and the name of the other Patience.
>>Passion seemed to be much discontented; but Patience was very quiet.
>>Then Christian asked, What is the reason of the discontent of Passion?
>>The Interpreter answered, The Governor of them would have him stay for
>>his best things till the beginning of the next year; but he will have all now:
>>but Patience is willing to wait.

>> Then I saw that one came to Passion, and brought him a bag of treasure,
>>and poured it down at his feet, the which he took up and rejoiced therein,
>>and withal laughed Patience to scorn. But I beheld but a while, and he had
>>lavished all away, and had nothing left him but rags.

>> Then said Christian to the Interpreter, Expound this matter more fully to me.

>> So he said, These two lads are figures:
>>Passion, of the men of this world; and Patience, of the men of that which is to come;
>>for as here thou seest, Passion will have all now this year, that is to say, in this
world;
>>so are the men of this world, they must have all their good things now,
>>they cannot stay till next year, that is until the next world, for their portion of good.
>>That proverb, `A bird in the hand is worth two in the bush', is of more authority with
them
>>than are all the Divine testimonies of the good of the world to come.
>>But as thou sawest that he had quickly lavished all away, and had presently left him
>>nothing but rags; so will it be with all such men at the end of this world.

>> Then said Christian, Now I see that Patience has the best wisdom,
>>and that upon many accounts. First, because he stays for the best things.
>>Second, and also because he will have the glory of his, when the other has nothing but
rags.

>> Nay, you may add another, to wit, the glory of the next world
>>will never wear out; but these are suddenly gone. Therefore Passion had
>>not so much reason to laugh at Patience, because he had his good things first,
>>as Patience will have to laugh at Passion, because he had his best things last;
>>for first must give place to last, because last must have his time to come;

>>but last gives place to nothing; for there is not another to succeed.
>>He, therefore, that hath his portion first, must needs have a time to spend it;
>>but he that hath his portion last, must have it lastingly; therefore it is said of Dives,
>>"Thou in thy life-time receivedst thy good things, and likewise Lazarus evil things;
>>but now he is comforted, and thou art tormented." [Luke 16:25]

The parable is thus of the passion of the administration laughing at
the world as they glory over it. The plight of New Orleans reveals
their moral poverty in that all towns are New Orleans in their eyes.

I doubt that you know at least as much as I do, because you would realize
that your posts are completely off-topic for all of the groups that you
insist on posting your religion/atheist arguments.
It may have kept to a single thread, but I would disagree with you about it
swamping the newsgroups, since it your posts are almost two to three times
the on-topic posts for these newsgroups.
I don't understand the point that you didn't start the thread, but that you
are still posting to it. If someone else starts a fight and you just keep
hitting back, does that mean you aren't fighting? Now, I understand your
ignorance and why your arguments are all skewed.
Take your discussion to e-mail. This thread started on-topic, but people
like you, who can't follow rules, have denigrated it to an off-topic
discussion.

You probably call the police a nazi, too, when they pull you over for speeding. How come everyone believes that they don't need to follow the rules and that when they have it pointed out to them that they are outside the rules, they are being "picked on." Is that what you were in school?

Not enough sense to stay on-topic, maybe? What is with the argument that "I didn't start it, but I sure the hell am going to finish it" attitude.

This is not a flame, I'm just trying to help you out. Do you have any webspace for those pics? If so, I would use a link. Most of these forums prohibit graphics files because they eat up server resorces. If you need help with ftp protocal let me know and I would be glad to help.

Ahh Pat, so you are engaging in the ever clever tactic of replying to posts without adding anything to them.

Which indicates to me that you are more interested in getting rid of postings that irritate you, as opposed to any real desire to keep the newsgroup on topic.

Your tactic is seen on the bands where people record and play back other hams transmissions. I guess it is a particularly unimaginative form of Jamming.

Are you a Jammer, Pat?

Hi Mike,

If I recall correctly, the forebears of the untelligent design crowd,
during the scopes monkey trial, attempted to mandate that pi was equal
to 22/7ths. However, I don't see where faith attaches to 22 and 7 was
always a cabalistic device of the middle ages.

Close enough for as many as 3 would be.

I would hate to drive on their 13/14/15 inch tires tho'. ;-)

With enough faith, who needs tires? Just pray, and after you starve to death, you reap your reward.....

Frankly, I think they are the modern day version of the sabot throwers.

> I would hate to drive on their 13/14/15 inch tires tho'. ;-)

Their Escalades are heavy enough to round off the out of round sections.. 8^)

4828. SWR-Wattmeter and Antenna Tuner Combo for QRP?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-02 01:25:31 UTC
From: Rockinghorse Winner <rockinghorse@phreaker.net>
Message-ID: <1128216331.573999.35810@z14g2000cwz.googlegroups.com>
Source record: 13001

Hello. I am a recently licensed ham who is finishing off my first rig, a tentec 1315 QRP monobander. I plan on feeding it to a dipole about 20 feet up. I have been looking for a Wattmeter/SWR Meter that can read SWR with low output (3-5 Watts), and for a Tuner that can be passed into and out of the feedline with an internal bypass switch. I would prefer a meter and tuner that can also be configured for 100 Watt output, but that is not a necessity.

I've noticed some meters give a minimum power output for usable SWR reading, and often it is well above QRP power levels. So, I guess I am looking for a meter that can read SWR accurately at QRP levels, and a tuner with an internal bypass [pass-through] switch.

Thank you for your input.

Rockinghorse Winner (Waiting for my Callsign)

Radio Specialty Model 1179-22-1 Repeater----------------$ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed, but inside is very clean!
Repeater is in a wall mountable battleship gray cabinet,
that is 4" deep by 13.5" wide, by 21.5" tall, and is
around 30# in weight. It is a VHF base/repeater used by
the BLM out west...
It also has on the front cover, I-5YACC, then under it is
271, under that VHF REPEATER. There are a lot of FCC type
acceptance # all over inside, plus the maker, and maker's
partial address, and part # for transmitter, and receiver
sections.
NO documentation.

2 Kenwood TR-7950-----------------------------------EACH-$ 80
Each comes with mobile mount, and 1st sale gets the
packet adapter. Are in very good shape, but do not include
the TU-79 PL boards which are available at www.piexx.com
They will not come in original box, and if I do not have
the manual, I will photocopy, or pdf one (your choice)...

Standard C468A LNIB-------------------------------------$ 75

LinkXcel PS-141B 4 port KVM Switch with 4 cables---------$ 65
-Like New- This is the PS2/VGA model -No manual-

Pioneer DRM-602X Scsii cd changer that uses Pioneer------$ 15
audio cd carts.

All items will include manuals unless noted.
Shipping is NOT included on any item(s).

The controls have already been put in place. The idea of posting on-topic
is nothing new and most people find a way to keep themselves within those
boundaries.
I would imagine that the band plans for the amateur radio frequencies are
only a "guide" for you, too, and that you feel that you can transmit in any
mode and on any band that you feel fit. Right?

That wasn't my point. I thought some of you might figure out why. I am
quite disappointed to tell the truth.

6 x 9 = 42

It's not that tough, unless you can't think out of at least one box.
And those that figured it out fron "The Book", please do not comment.

Pat, usenet has no controls "put in place" (except on moderated newsgroups).
Each newsgroup is commissioned for a stated purpose and should generally be
followed, but sometimes the exhuberance of the moment causes us to stray off
into other areas. S#!t happens!

> I would imagine that the band plans for the amateur radio frequencies are only
> a "guide" for you, too, and that you feel that you can transmit in any mode
> and on any band that you feel fit. Right?

Bandplans are voluntary "guides", and generally make good sense. Times happen,
however, when there are good reasons to deviate from a particualr bandplan. So
long as the mode/band is FCC-legal and I have a personally-acceptable reason,
you're right --- I >>do<< feel that I can take a one-time exception to the
bandplan guidelines.

Source record: 13014

I have a hy-gain CD-45-II Rotator and Control Box for sale. It is not working. I think that it is a problem in the control box. It has the original manual and the upper and lower mast brackets. The Control box looks very clean, but the needle on the meter sticks at different places when power is off and you move the box around.
I am sure that the rotator will need cleaning and lubing. These things sell for over $400 with the optional lower mast bracket. I will take $115 plus shpping for this one.
Thanks, Charlie Hugg, K5MBX

Crossposted to:

rec.radio.amateur.antenna,rec.radio.amateur.misc,rec,radio.amateur.equipment

Novitiate here:

I am learning AM broadcast basics in particular the issues regarding the geo-targeted broadcasting of alert messages from moving vehicles. Would most appreciate any assistance.

Due to Katrina/Rita, the company I work for has been given the opportunity to demonstrate a messaging system that would reach out approximately 1 mile +/- in transmission deliverance. This would be an "overbroadcast" (my term) in that it would override local AM radio broadcasting to reach into cars, trucks etc. In particular, we are working with a stationary site (a chemical spill for instance) and an emergency vehicle that would move back and forth at and through the site, at up to 70 mph, broadcasting an alert, voice and tone message.

Reading about LPAM, this looks technically possible but one concern I have is antennae size. A fire truck, for instance, could have an antenna mounted on its front, and up to 4 feet over the top of its roof, so we might look at as much as 20 feet of length. I realize this places us over the 3 meter max so one of the ???? is whether LFAM is realistic.

Am I way off base here, can any antennae, fractal or other, or any AM antennae technology, be utilized to design an antenna and propagate this type of signal?

All comments appreciated.

Any particular reason you want a Toshiba brand tube? There are lots of these available as NOS in various brands.

$6.00 each from these guys: http://home.att.net/~esrc/esrcs3.html

$9.50 each from these guys:
http://tubes_tubes_tubes.tripod.com/tubestubestubes/id18.html

These are just two of the NOS sources that I can find quickly.

The things that pop into my mind are why AM rather than FM, which tends to
be more local, and do you intend to 'over-broadcast' only the local channels
(how many?) - I assume you intend to make the channel(s) selectable - or the
entire band to ensure you get everyone? Assuming that there is a commercial
AM broadcast station in the vicinity (what, 10 miles? 20 miles?) you are
probably going to be flat out getting a mobile rig to ride over it. How do
you intend to do this?

Cheers.

Ken

A disadvantage I see is that a waiver is going to be required in order not to violate FCC rules. In fact, in the state of Florida, interfering with broadcast stations is against state law, so another hurdle to be overcome. That being said, for this system to work, you have to blanket the entire AM and FM broadcast bands. Even doing so will leave out the motorists who use XM or Sirius, the Ipod listeners and those who are driving with their cellphones plugged into their ears.

Hi Ari

I always wonder whether broadcast at the most common IF frequencies would be a viable alternative? (eg 455khz for AM) Legality issues aside of course... This would make frequency selection a little easier to engineer. You wouldnt have to divide your power budget into many operating frequencies as well. Problem is that you'd need a lot higher ERP especially since car mounted radios tend to be better shielded than portables. (You'll need to experiment some)

Since part of your engineering exercise will be to determine what ERP you want from the system you are proposing, the size of the antenna only needs to be considered in line with the transmitter output power. Obviously there will be a useful compromise somewhere that is cost effective. You might for example want a 100 watt TX for each frequency with a fairly lossy/terminated and loaded antenna. Your first port of call will be to determine what the likely highest strength of an AM/FM broadcast signal you will need to override, add maybe 20dB to that and work out your needed ERP. You will find lots of texts about the inefficiencies of MF antennas mounted on motor vehicles so that will give you some numbers to work with. Remember that making the antenna wideband will also introduce substantial loss. Note that you cant design the system to always work as you'll have situations where the radio stations transmitting antenna is right next to then freeqy where the event occurred! Decide on some statistical coverage percentage thing etc etc...

I worked for a concern in Sydney Australia that put in tunnel rebroadcast systems in the major underground roadworks in Sydney, Melbourne and Perth. Being in a tunnel of course there werent really any licensing issues. The system consisted of not only broadcast band (AM & FM) receivers but spot VHF/UHF FM receivers and transmitters for police, fire etc vehicles. Each broadcast frequency had its own transmitter. It was thought to be a better idea than using a wide band TX covering all frequencies. AM broadcast was coupled to a very long wire and the rest used a terminated leaky coax run.

Cheers Bob W5/VK2YQA

I agree Bob. "Tunnel Radio" systems have been around for over 20 years, and AFAIK all broadcast on dual IF frequencies covering both am and fm car radios. Here in Boston this type of system is in use in all our tunnels.

Well, Ari, I can tell you this. People used to mock the fact that I had 7 antennas on my 1957 station wagon almost 50 years ago, but these days, the airwaves are so bereft of anything worth listening to, I never turn on a radio in the car. So, I will never hear your message no matter what you try.

Now, having said that, here is how the system design needs to be:
Since the frequency to which a target radio is tuned is an unknown, and since the input contains a good trap for the IF frequency, your transmitter needs to radiate about 2 KW ERP at each of three frequencies in the broadcast band separated by 262 kHz and 455 kHz. This will mix in the front end and produce a useful IF. Same technique on FM using two frequencies 10.7 MHz apart.

Good luck on the AM. With expected antenna efficiencies at that wavelength of about 3%, you are going to need over 100 kW of RF and antenna components with equivalent power ratings.

Let us know how it works out. The place I used to work no bid this about 20 years ago due to these problems, and that was not the first time this crazy idea surfaced.

I have a military radio and I need to get a power supply to charge the 12V battery. The manual says to charge it at 1A for 5 to 6 hours. Does this mean that I have to buy a power supply that has a variable current control? The battery is a lead-calcium.

Thanks,

Rod

The issue of selective vs full range broadcasting is a matter that has not
been decided either by client, company or possibility. There are plusses
and minus' to each.

Selective would entail less power but we are being told power of the fire
engine is not an issue.

Yes, the budget is rich with expected legal expenses. Since DHS has become a player in this, we are hopeful that we can get the necessary punch to overcome FCC and statutory issues.

Do we have to blanket or only blanket each locale, that is, the broadcasting stations of each locale?

Not only will we miss those no AM/FM listeners, we will miss those that don't have their radios on. An aggressive, road sign campaign is planned something like " Turn On Your Radio, It Could Save Your Life" type of thing near each incident site.

In that case, simply modify the sign to "Tune to 560, it could save your life" and use a discrete frequency low power transmitter.

there is no requirement that anyone listen to any broadcast radio. with the rapid growth of satellite radio there are even less people listening to either am of fm broadcast radio. add those who listen to cd's or dvd's and you get even less.

There are systems that are used for local road emergency notification, the 560khz one comes to mind, something along those lines would be the best bet, and add in signs on the backs of vehicles. i guess the real question is, what are you trying to do by overriding local broadcast stations? and over what size area?

Hi Ari

>>I always wonder whether broadcast at the most common IF frequencies
>>would be a viable alternative? (eg 455khz for AM) Legality issues aside
>>of course...
>
>
> I'm missing your point. Please explain.

I apologise if you already know the following! Its pretty basic radio..

Almost every radio receiver on the market works off the "superhetrodyne" principal where the incoming signal is mixed with a local oscillator down to an intermediate frequency. This makes receiver design a little cheaper as you can then put your expensive filtering at one frequency rather than have something that has to track the actual transmitted frequency.

For example a station on the AM band at 870khz is mixed with a local oscillator of 1325 khz (in the receiver) to get a difference of 455khz. If the station frequency is changed then one only needs to modify the local oscillator frequency. This is what the knob on the radio does!

The most common IF frequency for an AM radio happens to be 455khz so transmitting on that will mean you will be heard on all AM radios in close proximity. I dont off hand know the most common broadcast FM IF (maybe 10.7MHz or 7.8Mhz) but that should be easy to find. It is important to make sure that the IF of the fire trucks FM two-way radio isnt the same or you'll never be able to hear it inside the truck!

To "broadcast over" you would need to amplitude modulate the AM band 455khz TX and frequency modulate the FM broadcast IF frequency.

> Good advice here, will 20db do it?

FM is easier to do than AM. I'd factor in maybe 6dB for FM. You might be able to get by with 12dB for AM but the original station will make some small amount of noise under it. The important thing is that the person listening wil be able to understand the content.

Note that this is of course only relevent when transmitting on the actual station frequency.

> Yes, we are shooting for max overbroadcasting but the reality is it is a
> hit and miss proposition. Even the scenario of geo related
obstructions is

> a possibility.

Well it shouldnt be that hard to model. Do a AM and FM band coverage prediction over the freeways etc you are doing the experiment on to discover what the receive strength will be in dBm. (It doesnt matter what "gain" you make the RX antenna because it will be the same figure that is used for your overbroadcast) For every say 200 yard square take the mean signal of each, then take the 80th percentile as the signal you have to beat. If that was (say) -80dBm you want -74dBm (for FM) at the maximum operating distance (was it a mile each way?) You then reverse model that to determine what the TX EIRP of the thing on the truck has to be.

There are bound to be contract houses that will do this prediction for you. I use to work for one that had the software and I have some GPL versions myself. I cant do MF (ie AM broadcast) though.

> Being in a tunnel of course there werent really any
>>licensing issues.

> Is that peculiar to Aus?

The licensing issue or the tunnel? Tunnel rebroadcast is pretty common around the world. The company I worked for also did one in Indonesia. Its also used in underground mines.

> Very nice, congrats on that. Was it Yagi technology or fractal?

Err, the leaky coax was just a 2km run of an Andrews product that has leaky holes in the shield. It was fed in the middle with a wide band splitter and terminated with 50 ohmss at each end. Its quite a common thing to do in underground environments. (Buildings too) Handy for two way radio as well as cell phones.

The AM thing was just a very long terminated (600r) wire.

None of the above are yagi or fractal

Cheers Bob

Hi Ari,

As you have described it, and have seen the discussion in regard to
the need for ERP - you are so deep in the debit column with AM power
EQUAL to a local broadcaster, that to climb out of that hole would be
prohibitive. READ: no fire truck has a power plant sufficient to
cover both the antenna system losses AND "overbroadcast" as you
desire. And this is for ONE station only. Imagine your broader
mandate to "overbroadcast" all local stations and that hole just gets
deeper.

>Am I way off base here, can any antennae, fractal or other, or any AM

Hi Ari,

The various pieces of this jigsaw puzzle is beginning to reveal a
picture here. With the introduction of two governmental
organizations, and their regulations, your "plan" has all the
appearances of being suitably crafted to work on paper. It responds
to the individual issues that any squinty-eyed bureaucrat would demand
be satisfied for his postage sized turf, but in the overall it would
fail miserably, or drive costs so high as to be tainted with the plea
that "aren't people's lives worth the price?"

Let's see, the original spec calls for a disaster situation that is
confined to within 1 mile; that demands the local population be
informed; that over-rides their usual paths of communication; that
reaches them even when they are not engaged in listening.

As already pointed out, big sound trucks do wonders, and have worked
well since the beginning of the last century for this purpose. That
kids inside their home can hear the ice-cream truck a mile away is a
testimony to this simplicity.

Knocking on the door of the local broadcasters and commandeering their
air-time has a time honored tradition of working quite well too. This
involves no more time than getting that expensive mobile power plant
rigged with wide band transmitters working into hugely lossy antenna
systems into the same danger area. After-all, you could as easily
call the first most obvious radio station as them, and you could be
calling the others before they even got on the road.

The solution demanded is that all radio stations respond to a disaster
network alert and citizens tune to the Civil Defense frequency when so
warned by them. Is this another administration cut-back that was
shelved as one of those unnecessary "entitlements?" Have they clipped
all the wires to those old Air Raid sirens? When did the lights go
out in FEMA?

My experience with AM (on the aircraft band) is that two transmitters
at the same time yields a horrible squeal and nothing else. The louder
station (usually on the ground with hundreds of watts) has no particular
advantage over the other station (usually in the air with 5-10 watts).
In other words, there is no effect like FM capture.

1) to grab those that are listening to AM/FM, it is still a hyooge market,
2) client request, 3) DHS preference 4) the number of people alerted by a
sign/sticker and independent warning channel is much less than both that
and AM/FM, 5) the possibility that once the AM/FM FCC/NAB bond is broken, a
precedent could be set for cell, sat, threading messaging, etc 6) spinoff
tech for local/reg/national emergencies.

> and over
> what size area?

1 mile radius max from point of incident, less most probably.

No one, in the end, will care about that, Richard, it's buzz words. The
economic hooks are in lessened liabilities and coordinating better
emergency evac and site control plans. Money talks here.

That piece is a given, no argument there, the AM/FM piece is just one more
way to insure commo.

Yes, but as we recently saw, things left to the "if come" often don't "come" ask FEMA. The plan needs to be in place and the control out of the hands of anyone except local/reg/national authority.

> The solution demanded is that all radio stations respond to a disaster

Nothing wrong with that if you know where to tune. I don't, come to think of it.

MOF, it's an idea that came up over dinner during FEMA/NOLA, don't know about the sirens, all I do know is once FEMA got there, they shutdown most commo inc police in some cases. They want total control so this p[iece has more play at the immediate response (local/state) levels.

Man, don't apologize, I have this semi-advanced understanding that missed a
lot of the basics, if you get the drift. Thanks.

Are you saying that if I am attempting an overbroadcast on, say, 680 AM and
the station is doing the same, and I am 12 db + greater, that all we will
get is squeal?

One signal is the Beat Frequency Oscillator. I am amazed
that no one has thought of this perfect solution before.

If Morse code were required for all driver's licenses, then
all you have to do is furnish a CW carrier wave. The two
signals would mix and the squeal would be Morse code which
would carry the emergency information.

For sale -- nice HF station:

Kenwood TS-850SAT HF transceiver
Built-in antenna tuner (fast and quiet!)
YK-88SN 1.8 KHz SSB filter
YK-88C 500 Hz CW filter
InRad 400 Hz CW filter
VS-2 speech synthesizer board
DRU-2 voice recorder board
Original hand mic, power cord, manual
SP-31 speaker with audio filters
MC-80 up/down electret desk mic

Nice condition (not "mint") and works fine. This is
a clean rig from a smoke-free environment. One mod:
general coverage transmit is enabled (was that way
when I bought it). I am the 850's second owner, and
I bought the SP-31 and MC-80 new. Need cash to make
improvements to my antenna system.

The price is $850 -FIRM- for the complete station. Do
a little research at today's prices and you'll see that
my price is a bargain for what you're getting. I don't
want to sell the speaker or mic separately. No trades.
Cash only, no checks. Buyer pays exact shipping charges
or picks up gear in person.

73 and thanks for the read!

4887. Emergency Messaging, AM/FM *On Locomotive*

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-03 21:19:42 UTC
From: Ari Silversteinn <abcarisilverstein@yahoo.comxyz>
Message-ID: <1lihotn31d6fk.a79lqxn15md6$.dlg@40tude.net>
Source record: 12960
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.equipment

DHS has proposed a change in scenario. They want an on locomotive alerting system that could be commandeered and driven at, near or about a disaster site. Everything else stays more or less the same, overbroadcasting on local AM/FM, power off the locomotive, selective or full frequency broadcasting, train (s) to be in motion at all times. 20-30 second messages that would also combine a message to be aware that a locomotive (at speed) will be flying by the at grade crossings.

Comments?

if this is for real time notification you don't have time to bargain or to
find an unused channel... and who would listen to you anyway if it was
unused? how often do you turn the knob on your car radio??

what about the emergency broadcast system? that would seem to be the
'proper' method of emergency notification, its already set up for all sorts
of local, regional, and national notifications.

There are a couple of frequiencies for unlicensed low power am stations. You can see them in use by real estate folks selling houses. There are no commercial stations on the frequency.

Impractical, for the same reasons cited earlier. What's wrong with
electronic message boards on trailers fitted with sirens and, if deemed
necessarily, a very large guy with a gun to maintain interest.

You may find that sci.electronic.misc or sci.electronic.design may be more
relevant, since it's commercial/military and not amateur. Mind you, they may
also be less polite.....

Ken

Why a loco anyway? It would appear to be the mistaken assumption that anything that big must have power to burn on anything plugged in by a user. Not the case - the power from a loco is, not surprisingly, applied to the tracks. The electric generators used for powering gear other than the train's vitals are not high power.

Telling us you "might" hear interest in turning streets near you into
canals? Might not? - newsflash! Taking I-5 south to I-10 east, you
are 2274 miles or more from even a remote chance with respect to New
Orleans.

Well, he's not a troll in that he's making it up as he goes - it appears he
really is hoping to do for his company what he says (source: Google).

However it's a job which really equates to:
<Government fleeces tax-payers>
<Bureaucrat gets hold of budget allocation>
<Bureaucrat needs to succeed - ie. unload allocation>
<Ari and co. want to be under the hopper when the jackpot payout commences>

A valid way of doing business, but still a crock.

Ken

That would be much easier, simply sweep a modulated oscillator across the band. With a couple of adjustments it would be easy to emulate a train whistle, a somewhat universal warning.

Wonder no longer, because broadcasing at IF frequencies has been for year the standard in the US. In spite of some rather silly speculative posts, this mechanism has proved itself for more than 10-years here.

In a confined space such as a tunnel, a transmitter of 10-watts more than sufficint to get the job done, and using nothing more sophisticated than a simple wire radiator running the length of the tunnel.

In Boston, we also retransmit commercial radio broadcasts into our tunnels, but that requires equipment dedicated to each radio channel that we re-broadcast, and that becomes very costly after 10 stations or so, hence there is a limit.

The real challenge is in maintaining emergency communications to the outside from within our tunnels. All are serviced by the traditional leaky coax that runs along the top of the tunnel, but considering that all of these emergency services operate on their own indepdendent frequency bands, so servicing them simulteously becomes somwhat problematic. particularly when hand-held, low power devices enter the big picture.

All agreed, but that is in a tunnel, which has the advantage of not having
to overcome the still-received commercial stations. The OP wants to do this
out in the open, anywhere, any time. He also wanted to do it while driving
at high speed for some reason, but I think he's quietly shelved that part of
the idea.

Cheers.

Actually, it's not.

What made you bring up tracks anyway -- my reference to the
tracks on the lake falling in? My point was that the locomotive is
going nowhere there aren't usable tracks.

On a diesel-electric locomotive, the generator's output is
applied, not to the tracks as you seem to think, but rather through
control circuitry to the stator around the axle. It's rather amusing
to see a repair yard worker with a set of wheels-and-axle (they're all
one single piece, in case you didn't know) clamp a stator around the
axle, connect a battery with a pair of short jumper cables and walk
the whole arrangement across a concrete floor as though he were
walking the family dog.

BTW, at 4,000+ horsepower, you could plug in nearly anything a
user might want, given proper appliances and the right plug. :-)

I have the pics hosted on my own site but that does'nt get any lookers to
the Ebay site if then would like to bid.
I know there are some that don't like these posts but they are free NOT to
look at them via a Supplied filter.
I am trying to limit the amount of these posts but it's hard.
Thanks for your suggestion.
Rich

And what are these messages suppose to convey?

The target audience already knows it's screwed.

We all (outside the screwed zone) saw the blizzard of useless
"messages" the government(s) issued during and after Katrina.

Just what I need to hear from a locomotive blowing by at 50 mph:

"Hi! We're the government and we are here to help you."

The best that came out of post-Katrina was from self-help and
assistance from non-government organizations. And, the
government even thwarted some of that.

The inmates are running the asylum:

http://www.iht.com/articles/2005/10/02/news/storm.php

Ninety-one thousand tons of ice melting in idling 14-wheelers.

Like I said in another thread, "Emergency" implies IMMEDIATE (not planned) danger to life, limb, or property. It seems that, in your proposal, you are PLANNING to use these frequencies instead of more appropriate ones. I would think that you need to create (and supply) a system that is isolated from broadcast frequencies.

How about using links to the jpeg files (on your own server)? This would
save lots of space on host storage.

Suggestion: Why don't you also broadcast such "emergency" information over the entire spectrum of wireless network frequencies? That way, you could post the information into every Usenet group on the globe. Just like you have done with these postings.

> seems strange, and not very practical.

There is an element of both I agree and the locomotive environment, except in the newer ones, can be a bit hairy. Whether or not the concept is valid, that's for DHS to decide and they already have.

The driving force behind this, imo, is that during NOLA no effort was made to use the RR as a means of evac. Several of the lines offered but FEMA refused. Instead, Carnival made off like a bandit with 1/3 full ships but 3/3 full government pay.

In order to evac, the RR would need to run flat out and with an evac traffic surge, crossings become more critical.

Locomotive because of the need for a manual override by the Head Engineer.
CSX claims they can provide access to 1,000 watts.

Indeed it is both. Considering we gave away a central DB technology to
DHS-NOLA, then they failed to use it, we are hoping to make money this time
around *and* that they will get their acts together.

Primarily two things, alerting pre-evac and at grade crossing alerts that a
high speed locomotive is approaching.

> We all (outside the screwed zone) saw the blizzard of useless

And a blizzard of useful ones as well.

The EBS is voluntary, this is not.

Yes, and at Disney World, etc. This is a very doable idea and may well
solve FCC/DoD issues.

Hi Ari

I always wonder whether broadcast at the most common IF frequencies
would be a viable alternative? (eg 455khz for AM) Legality issues aside
of course... This would make frequency selection a little easier to
engineer. You wouldnt have to divide your power budget into many
operating frequencies as well. Problem is that you'd need a lot higher
ERP especially since car mounted radios tend to be better shielded than
portables. (You'll need to experiment some)

Well first.. to place the TM-V7A in cross-band repeat there are a few setup things you have to do first... Also the (C) command that your thinking of to place the tm-v7a is incorrect to some degree. Kenwood has a mode that allows 2 kenwoods to talk to each other.. in the book this is mentioned as Remote Control. Your radio shack hand held will not do this.. But you can place the TM-V7A in cross band and then use it around your house..

To setup the TM-V7A for cross band you need to save a PM memory slot with the freq. setting that you want to use.. note that I would advise using tone decode. Ok once you have the freq.s entered and your tones set.. and you have tested that one band works through the repeater and the other direct with your hand held.

Next.. set the PTT on the band you want to repeat too. then press the little button between the 2 volume control nobs.(control select) you will see ctrl on one side and PTT on the other.. the ctrl need to be on the side that the portable is going to use.

Once this is done.. save this into a PM slot (1-4) to do this you would press (F) function then PM then select one of the 4 blinking hot keys.

Once saved then recall it.. by pressing PM then the hot key (1-4) that you save it in..

now we can place it into cross band repeat. to do this.. power the unit off.. press the LEFT volume control and hold it in while you turn it back on..

When the TM-V7A comes back up.. you should see.. A blinking PTT and CTRL on the other side.. and your in..!! it is now in Cross-band repeat.

to take it out of this mode.. power the unit off.. press the LEFT volume control and hold it in while you turn it back on..

hope this helps..

He wasn't referring to your finance budget, but your energy budget. I
hesitate to say it can't be done in any practical sense, but that's my
thought. The idea of one poster to transmit on the IF's is a good one but I
didn't suggest that because you'll also kill your emergency services comm's.

Incidentally, do you plan to have every loco in the US fitted out or are you
going to fly the loco's to the incident site to do their stuff?

Cheers.

But you've already changed it! Initially you said it was to be used at an
emergency site, and now you're saying it's to warn of a high-speed train
cometh. What the hell gives?

No, but forewarned is fore armed. :-) Your spec's are a bit nebulous, to say

the least. I'm not accusing you of having no clue, but I'm damn glad DHS doesn't use tax-payer funds from this part of the world. This is an exercise in getting rid of funds grabbed during a crisis, when the opportunity arose to expand the empire. Standard bureaucratic function.

Cheers.

Ken

I'm really not criticizing you, per se, but I don't think the concept is
well thought out.

You refer elsewhere to this being an auxiliary warning system on a loco -
level crossing lights/bells/boom gates not enough? They usually are, so why
the worry now? (Okay, we know it's the moolah....).

You also refer to 1,000W being available - it's just not enough for what you
want to do. Period.

Good luck with them getting their act (I would have said something else!)
together, but don't bet the bank on it. I'm actually an ex-bureaucrat myself
and to call me cynical of governmental abilities would be an understatement.
But if you do come up with something useful (I bet it ends up being a

spin-off rather than the initial concept seen here), I hope you get something out of it.

Cheers.

Ken

Hi Ken,

His terse reply refers to the public coffers - troughs - open for this fabulous pork barrel feast. You know, crack dealer capitalism.

Nothing has to actually work, or be useful, or even be used. It just has to generate paper in one direction, and cash in the other. Ari is mining us as a dry run for all the terms, shortfalls, and fits to the jigsaw to rummage up into a proposal.

It can be found under the section that allows a transmitter as long as it is
less than some number of milliwatts per meter.

If you really need the exact section, I will drag out the regs and get it
for you.

That is part 15 and it isn't just a couple of frequencies, it is any frequency in the AM broadcast band (and the FM broadcast band, for that matter).

Specifically, 15.219 allows operation on any frequency in the band so long as (a) the input power to the final stage is less than 100 mW and (b) the antenna "system" (radiating element, coax, and ground lead) is less than 3 meters long.

15.221 also allows operation with an unspecified power level into leaky coax with a field strength limitation.

Power is not milliwatts per meter. Power is milliwatts. Field strength (also an allowed measurement) is in volts per meter.

The OP said that there were a "couple of frequiencies(sic)for unlicensed low power am(sic) stations." That implied that there were a couple of frequencies that were unused in the AM band by commercial stations, and I just wanted to have a reference to WHAT they were and WHERE in the regs they were delineated.

In this case the milliwatts per meter refers to frequencies stated in meters.

Volts per meter only applies to the E component, the magnetic component is always stated in amps per meter.

I will get back to you on the specifics. I am pretty sure that my brain is not suffering from a senior moment as to my recollection of the regs.

Hi Fred,

Is this to suggest that for 300MHz it is 1mW total input power as say
compared to 1MHz allowing 300mW?

This would be uncharacteristically generous of the FCC whose
regulations would ban emissions from dummy loads.

Seems it would hardly serve Ari's search for pork, but I suppose
grantsmanship would jump at sending a marathon of runners through the
spill area - each carrying sub-Watt handi-talkies to provide the
aggregate power, and spectrum, and lung volume necessary to "get the
warning out."

Richard the value changes per band and is stated in part 15. For example in the broadcast band the formula is 24000 /F for microvolts at 1000 feet.

There are certain bands that no emissions are allowed from a low powered device. For example setting up your neighborhood micro Rap Station on 121.5 MHz (aircraft emergency) would probably bring a swift shut down.

I am still searching for the reg that allows fixed information stations. IIRC they can be run on 530 and 1750 KHz. I know in the past I had looked at the regs and the particular station I was researching was indeed legal.

In the low freqs (140 KHz area) you can run up to 1 watt CW with out a license.

Not quite. That is the limit in 15.209, with the following caveat
"...except as provided elsewhere in this subpart..."

Elsewhere in the subpart (15.219 and 15.221) we have the limit for the band
525-1705 kHz. (AM broadcast band) the 100 mW and 3 meter antenna restriction
OR a 15 uV/m restriction at a distance of (47.715/(frequency in kHz.))
meters (which is also lambda/(2 * pi)) from leaky coax.

BTW, it is 24000/F uV/m at 30 meters from 490 to 1705 kHz., which is more
like 100 feet, not 1000 feet (15.209).

The problem is that anything that is speced at this point is bound to be
changed by FEMA, DHS, FCC, and God knows who else. The idea is to start
somewhere and march forward beginning with the writing of a "white paper"
that can be shot full of holes.

So if I need to go out 3500 feet or so, this won't work. Correct?

Considering that we have many technologies in use, mof, all technologies
that are not in development are in use, this is a load of horseshit. If we
build it to spec, whatever that spec is, it will be proprietary and how and
when they use it is not in our hands.

4988. Ameritron AL-811 ALC Question

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-05 02:46:41 UTC
From: radio-operator@telus.net
Message-ID: <1128480401.762037.56670@z14g2000cwz.googlegroups.com>
Source record: 12861
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.dx,rec.radio.amateur.misc

I have a question for anyone who owns an Ameritron AL-811 amplifier.

I have connected the Relay and ALC connections to my rig and the amplifer works great except for the ALC protection. I have confirmed for 100% certain the radio is connected correctly.

When attempting to adjust the ALC limit on the rear of the amplifier as suggested in the manual I am not noticing any effect on the rig. I have driven the amplifier up to to 85W, and still do not notice and reduction of power on the radio as indicated in the manual.

Perhaps I am missing something, but my understanding was when the power into the Amp was over 70W and the rear ALC control was adjusted the voltage from the Amp should kick in and power down the radio to avoid distortion.

Any assistance would be greatly appreciated. Even if someone knows which is MAX and MIN on the back panel ALC adj., that would be helpful (i.e. clockwise or counter clockwise).

Thank-you...

Lloyd
radio-operator@telus.net

I think you may be a bit confused about ALC, or I don't understand your terminology.
In my world, "power down the radio" means it would be turned off.

ALC, when properly adjusted, is a control voltage that should limit the power output of the transceiver to prevent overdriving and damaging the amplifier. For Amplifiers that have relatively low drive needs for full output, it can be helpful in extending the life of the tubes, as compared to the reduced life effect of driving them beyond their dissipation rating.

I used to have an ameritron 811H (four tube version) and no longer have the manual, but if I remember correctly, the setting method was to transmit a known signal level into the amplifier and adjust the ALC control on the amp until the power output of the amplifier dropped (just barely), thus setting the level for protection. After it was properly set, cranking up the power output on the transceiver had little effect when the amplifier was not in standby mode.

A caveat though: Even though implementing ALC is a relatively good idea, it is generally better to have really good operating habits and watch the levels, rather than relying on the Amp to protect itself. I know there is always the possibility of making a bonehead move (I'm sure we've all made one now and then) but good operating habits first are the best defense against overdriving an amplifier.

Thanks

Hello Rick,

Your assessment matches the manual, however if you have any specifics on the adjustment that would be helpful. (When I said power down the radio I did mean decrease the output power on the radio).

Do you need to drive the amplifer with 70W+ or will the ALC control work with 30W drive from the radio?

I followed that same process, however did not notice the "drop" in power on the amp or tranceiver when adjusting the ALC adjustment on the back of the AL-811.

Thank-you
Lloyd

I think you will find that the FCC has the FINAL call on frequency band usage. I can't see them authorizing such intrusive use of the normal broadcast bands, especially after the broadcast industry gets wind of your proposal.

From a technical standpoint, broadband transmission of a signal is not hard. A simple VFO sweep of all the normal broadcast bands is all that is required. Obviously, the appropriate modulation techniques would have to be used for each band.

Another approach would be the use of a local (LOW power) sweeping UP/DOWN converter. In this method, you could transmit a specific (authorized) signal from the site. This signal would be received and detected by a local receiver. This information would be used to modulate and rebroadcast the signal within the vehicle. However, this would require onboard equipment.

I still think that your biggest hurdle will a legal one.

What transceiver are you using? Is the polarity of the ALC voltage
compatible with your transceiver?

I use an AL-80B. It has an ALC range of 0 to -10 vdc. My ICOM has a max
ALC of -4 vdc. I set the AL-80B for -4 vdc at max setting. Then I
adjusted the ALC SET on the front panel to activate at approximately 70
watts of drive.

The point I'm making is that two adjustments were required. First set
MAX ALC voltage, followed by setting ALC SET threshold.

4998. replacing internal lithium battery in htx-202

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-05 15:42:15 UTC
From: larry <larya@rogers.com>
Message-ID: <GPmdnVMCXsJwad7eRVn-gQ@rogers.com>
Source record: 12872

Greetings

Recently I aquired a used htx-202.. when turning it on, I got an error message...the previous user told me that that indicated that the internal battery needed replacing...

This morning I proceeded to open up the radio to get at the internal battery...

Not having any step by step instructions, on how to do it, I tried some 'by guess and by golly'. I removed the 5 scews at the back and nothing seemed to give... I then removed the 4 screws that hold the bottom (-) plate onto the main case... Nothing gave...

I then found two more screws on the side near the 'F' key and nothing gave...

I couldn't find anything else to unscrew so I gave the back and front halves a little more pull apart effort and the two halves finally came appart....

I then gently separated it, like a book, and openned up the two chassis.....

Inside the speaker half, I found the lithium battery...

It appears to be soldered in place.. the left wire goes behind a piece of metal while the right wire appears to be soldered to something...

Does anyone know how I can safely remove the battery... I tried to measure it's voltage but the battery appears to be covered in some kind of plastic... anyway I get a zero voltage...

And does anyone know the part number, of the battery, so I can get another one..

Also, is there another source, other than radio shack, in case they no longer sell those batteries.....

Larry ve3fxq

Hi,
I'm just cleaning up an old lady, a Rx YAESU FR 101. I found it last
month on eBay.de. Really a bargain ! Works marvellous ! It's worth spending
some time to make it younger.
The S meter is not illuminated . Before opening it in order to change the
lamp, I'm wondering if there is any l inside.
Is it a simple trick to calibrate the 100 kHz window ? The drum inside is
about 60 kHz
off-frequency, the system is like a clock-work (splendid !) and it MUST
be something anywhere to calibrate and adjust it !
Can anybody give me the infos ?
Thanks in advance

Thank-you Amos,

I was able to confirm the polarity and connection are correct and the
voltage ranges are compatable between the rig and amp (AL-811).

The manual for the AL-811 is very unclear as to exactly what the
process is to set the ALC control on the back of the Amp:

- What mode should be used on the rig?

- What power level is required on the rig to slightly overdrive the Amp
enough and obtain a neg voltage on the ALC output on the Amp.

- When looking at the back of the AL-811 and the ALC control knob,
which is MIN and which is MAX sensitivity?

My appologies for all the questions. My hopes are to find someone with
an 811 who can describe the process they used.

It's a standard 3v lithium button cell. You can replace it with any similar
one, there is plenty of room. The battery needs to be insulated. I just
used a regular one, soldered wires to it (tricky because if you heat
it to much it leaks) covered it with electrical tape and soldered new
wires onto the old ones where I cut them off the battery.

73,

Geoff.

If ANY such is to be performed, for railroad equipment, it must be well thought out, and, further, must face multiple Federal Agencies, and at least one private one (A.A.R., The American Association of Railroads) The additional federal agencies are: Federal Railroad Administration, O.S.H.A., and others-- One must also be aware of the facts that MANY frequencies would have to be involved, because of safety concerns (much like airlines), against interference. (No, it is NOT just about Train to train/work crew, and Dispatcher communications that is involved. Other equipment that railroads use are: 1) Track Carriers, for Crossing grade signals, dragging equipment, high-wide load, hot box detectors, Broken Rail detection, not to mention some telephony communications, 2) Remote controlled helper engines (unmanned engines on the end of trains to push-assist, and brake), 3) "FREDS" ("Friggin Rear End Devices"), some of which provide telemetry to the engineer of brake pressure, status of tail light, ect.- the new generation is conversant -2 way, also capable of dumping the brake pressure (emergency brake application, via remote control) and, other options (control of Railroad Central Traffic Control, or CTC. Also, on ALL track circuits, in signaled territory, the use of Insulated Joints is mandated, by the Federal Railroad Administration and can cause derailments, and other problems if NOT adheared to!and, 4) G.P.S. equipment
As to the Engines, tho, they have considerable power, they supply unorthodox voltages (a typical engine uses 600 volt, circuits, and the electronics used on them is in the 68-72 volt range- further, the newer engines are A.C. , the older diesels were D.C.
In sum total, then, this isn't a job for sidewalk superintendents! ONE item the railroads is STILL looking for is a concensus, for a Run-Away vehicle (by their work crews), that would alert a track gang of that runaway comming at them, causing considerable injury! They are STILL looking for such a foolproof device! Translation: DON'T hold your breath, or you will get awful blue!! Jim NN7K

In good cosmetic (about an 8) condition, radio works excellent and it
has the following options, narrow SSB 1.8khz filter, narrow CW 500hz
filter and FM module, no AM filter. Also comes with Kenwood hand mic,
original manual, original service manual and power cord.
Asking $375.

If interested, please feel free to ask any questions regarding the rig.

Email me direct at....gpita at patmedia dot net.

I am also good in QRZ.com

Thanks...Gil n2wjw

Jim,

I don't recognize the name, but did you ever work out of the
SF GOB? I spent 30 years there myself.

FWIW, I also hear from Brijet occasionally. You probably know
her (wherever you worked) as she was in charge of CDC for some years.
I spent a decent amount of time down there troubleshooting problems on
the remote lines to the zone offices.

Thanks, solid points. We have identified the FCC assigned to RR frequencies
and they are outside of the AM/FM bandwidth.

All this is convertible though, correct?

Nope, sure isn't.

Thanks, Jim, not holding any breaths. This isn't an in-house project, it's a coordinated effort that has all the complications and need for input as you have pointed out. We are asked to be Tech Central of sorts.

Why do you say that?

Here's a "heads up" for you, Ken. There are over ten FedGov agencies, several legal teams and the rail lines that are working with diligence on this, and similar, projects with the full intent of attempting to pull this off.

While you sit on the sidelines and nay-say.

If I had a dime for cheap comments like yours, I could fund this project out of petty cash. So goes the nature of those who do and those who comment about the doers.

Never down in Oakland/the CITY, worked in K.Falls for years,
started in Eugene, in '68. Finally moved here to Sparks, about
12 years ago. Yeh, remember Brigit- bet she doing better than
most - had Dave Stubbles in Roseville, until they laid him off
about 7 years ago then he went to makeing big $$$!!-- and the
two Mikes-- Rosemond - he back in Eugene, and Barnecascle- he
in Elko, NV- got a year until retirement! Guess Bob Hall
still retired in K.Falls, and Jim Haas also there (he took my
job when came to Sparks). All retired (except for the two mikes).
Think you Kaiser D ?? have fun-- Jim (A.J. Foster) NN7K

Ari- The power of a locomotive can be converted but, there are
certain problems, like going downhill, not only are brakes applied
to the cars, but the diesels go into "Dynamic Breaking", a complicated
way to say "Let the driver wheels run the motor (as a generator), and
them dump their output to banks of RESISTORS!! Provides great breaking,
but lousey voltage regulation! The radios on these units are powered
by (as stated,) 72 Volts, tho the radios also work on 12 volts (which
was the standard in Cabooses). The main point tho, remains that there
are considerable electronics (the new G.E. A.C.engines , from what
I have been told, are computer operated)! and that anything that
interfers with other items causes considerable greif to the operation
of a railroad- even turning a relay upside down can cause a derailment!

>>They are STILL looking for such a foolproof device!
>
>
> What's the issue, this appears not to be a huge deal?

Well, Ari-- the big deal is (Primarily in mountainous country- even
a grade of .5 degree, is considered quite steep). Now, suppose a
Maintainence of Way employees (push car, Motor Car, Hi-Railer (a
pickup equipped for rail travel) accidentally get loose- these can
be doing considerable speed- several MILES later-- worse, these
dont trip the signals, and further, the work crews have the track
from the dispatcher, so these can sneak up on workers with fatal
consequences. A similar thing happened on the old Siskiyou line,
when the powers that be were testing one of the old style of
remote controlled helpers-, going down-hill, on 5 Mile /Hour track
they called the remote to go to dynamic brakeing- but it went to
8-throttle instead (full throttle)! When they got it to control,
that train was doing 20 MPH! Had a bunch of scared people on it!
as you can see, it is not for the faint of heart! I sure wouldn't have
wanted to be anywhere near that track-- would you ??
I know it looks simple, and most times it is, but it doesn't take
much for things to get out of control! Have fun -- Jim

Not a chance.

> I know it looks simple, and most times it is, but it doesn't take

I meant it seemed not to be, on first look, a difficult technology to
implement. For example, why not a sped sensitive device that set off an
alarm (vocal, radio, other) that could be preset "on" in situations where
these runaways are not manned?

I don't mean to downplay the potential complications but, technically,
getting an appropriate alarm system on a runaway doesn't sound like high
end technology.

Looking for a good set of Chassis Punches for home-brew projects. Something like the older GreenLee type of punch and die set. 0.5" to 1.5" or in between.

Colin, VE7TNT in Victoria, B.C.

5030. Wanted: 40m ARC-5 transmitter parts

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-07 12:37:22 UTC
From: k5dh@raytheon.com
Message-ID: <6_t1f.1$fH.0@dfw-service2.ext.ray.com>
Source record: 12803
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

Hi all,

I'm looking for parts to repair a T-22/ARC-5 transmitter that was damaged in shipment. This was a pristine, unused original transmitter that's worth repairing. Here's what I'm looking for:

* I need the roller coil, but only the coil itself, not all of the brackets and the roller contact. This coil is part number 6035, and must come from a 7.0 - 9.1 MHz transmitter (T-22/ARC-5, BC-459, etc).

* I need a top cover with the black wrinkle finish, which can come from any ARC-5 transmitter. It would be nice to have one from another T-22 so that the nameplate on the top would match, but that's not a necessity. I'd like to have the mirror in place over the 1629 tube, but that's also not a necessity.

* I need a front panel that's in excellent condition. I know, they're riveted to the chassis in several places. The rivets can be drilled out and replaced with either new rivets or black anodized #4-40 hardware.

* Calibration crystal somewhere in the 40m ham band. The one that came in my unit is up in the mid 8 MHz range.

I would prefer to buy just the parts I need, but if I have to, I'll buy a complete or incomplete rig if the price is cheap enuff. If you're looking to get rich by selling me ARC-5 parts, don't waste either of our time. I won't pay "eBay price" for this stuff. Someone must have what I'm looking for just taking up space in their basement...

Whatcha got?

73,
Dean K5DH

Check out Ebay and search for Greenlee. Be sure to get the radio chassis version, not the conduit which don't come in standard hole sizes. I just bought a bought an inch size for relay sockets.

Bill-

As Dick mentioned, you can align the master oscillator using a counter.

If you don't have a counter with the required accuracy, here are a couple other approaches that will work in a pinch. However, you should keep in mind that the oscillator's drift characteristics are not that great unless you have the TCXO option.

If you were to tune in WWV while they are transmitting a tone, you can change between AM, USB and LSB. When the oscillator is on frequency, the tone will not change among those settings.

You can also set up pairs of channels with opposite sidebands for one KHz above and below WWV. For example, one channel might be set for 19.999000 MHz USB and the other to 20.001000 MHz LSB. When you switch between channels, the one KHz beat-note tones should be the same when the master oscillator is on frequency.

Use the highest frequency WWV you can receive. If you can set your frequency within one Hz at 5 MHz, the error would be two Hz at 10 MHz, three Hz at 15 MHz, 4 Hz at 20 MHz, et cetera.

These methods may not work if you don't have enough of a "musical ear" to tell when the audio tones are not the same!

Lloyd-

You would do well to contact Ameritron.

You say you have driven the amplifier up to 85W. Obviously that should be
85 watts drive to the amplifier's input.

Have you measured the ALC voltage? You should easily be able to figure
out the control's min and max, and see if the voltage increases as you
increase drive to the amplifier.

If the voltage increases and is adjustable to the maximum voltage for your
transceiver, the transceiver's output should reach a limit that can be
adjusted with the ALC control. If the transceiver doesn't react to ALC
voltage, then it has a problem, not the amplifier.

How is your transceiver set to drive the amplifier? Using CW? I would
expect that to work, but some transceivers may depend on your setting of a
power level control rather than using ALC. Injecting a tone into the
microphone circuit (or whistling?) on SSB, may be necessary for ALC power
limiting to occur.

I have an external power meter between my rig and the Ameritron Amplifer
and have noticed the power output of the rig is less with the amp on.
If I follow the normal tune up procedure using about five watts of drive
then increase in increments, I can get the max output at about 45 to 50
watts. I cannot get the rig output more than 55 to 60 watts with the
amp ON. Is this normal?

Either your ALC is working or the VSWR is too high! If VSWR is too high
someone may have 'fiddled' with the input tuning to the amplifier.

Try it on several bands. It may be the ALC is set a tad too high and it is limiting the transceivers output just as it should. In which case readjust the ALC. It may also be bad tuned input tanks and/or a bad tube(s).

My AL-80B had high vswr on 15/17M tuned input b ut the problem was a soft 3-500Z. Fortunately it was covered under warranty. I made a night light out of the old tube. See here...

Mouser has non-Greenlee punches much cheaper than the Greenlees. I've
got some and they're fine. There might be a difference in a heavy-use
setting, but probably not for typical homebrewing.

It may be a fine project which will produce the goods, but let's look at the way you've brought it here:
- you wanted help to get up a truck-mounted transmitted to over-ride all AM/FM communications in an area. You wanted to drive the truck at up to 70mph through a disaster/emergency area, for no adequately explained reason (the RF is going for a mile or two outside the area, so why drive the truck?). You got told why it's impractical as described.
- you suddenly changed it to a loco mounted project. You struck gold on this one as there are people here who clearly have industry experience. You're not poo-poo'ing their skepticism, but certainly not fazed (may not be a bad thing....). Why not pour the funds into controlling all these uncontrolled level crossings instead of producing a 'box' to go on every loco that may drive through the US?
- you are trying to get commercial advice in a Ham group - is this the right venue?? I'd have thought not, though it's certainly cheap.

- having ten agencies etc etc on your side may get the project through, but is it the right solution to whichever problem it's attacking?
- 'nay-sayers' are a pain-in-the-arse, agreed - no-one likes them! - but sometimes you need to hear the other side.

Cheers.

Ken

"Locomotive Breath"

In the shuffling madness
Of the locomotive breath,
Runs the all-time loser,
Headlong to his death.
He feels the piston scraping --
Steam breaking on his brow --
Old Charlie stole the handle and
The train won't stop going --
No way to slow down.
He sees his children jumping off
At the stations -- one by one.
His woman and his best friend --
In bed and having fun.
He's crawling down the corridor
On his hands and knees --
Old Charlie stole the handle and
The train won't stop going --
No way to slow down.
He hears the silence howling --
Catches angels as they fall.
And the all-time winner
Has got him by the balls.
He picks up Gideon's Bible --
Open at page one --
God stole the handle and
The train won't stop going --
No way to slow down.

In an uncontrollable fit of nostalgia, I just bought a Knight T-150A transmitter off eBay. We had one at the club station when I was in college, and I liked it.

I need a set of Plate and Load knobs (the ones with the brushed aluminum centers). Let me know the condition and price, including the cheapest possible postage.

I also need the manual and schematic. I know there are many dealers on the internet who sell manuals. So far, the cheapest one I've found is $20 plus postage. I'm hoping that one of my fellow hams will have one and be willing to copy or scan it for me. I share my manuals FOR FREE (including postage and copying costs!) when I have one that some fellow ham needs. They say, "What goes around, comes around." Let's see if that's true.

73,
Dean K5DH (contact info good on QRZ.com)

Date: 2005-10-11 04:09:39 UTC
From: Bill <bcrann1@hotmail.com>
Message-ID: <TVG2f.4011$S43.355040@news20.bellglobal.com>
Source record: 12758

I recently was given an older KAM All-Mode TNC. It only has version 3.06 firmware. I was hoping to find a version 5 or later EPROM. Does anyone have an EPROM to sell me or can tell me where to get the bin file to burn my own EPROM. I have talked to Kantronics and they told me they no longer support this TNC. Thanks.

I need to get 'hold of a copy of an article from the November 1998 issue of 73's magazine.

The article is entitled "Build the Fox TTL Foxhunt transmitter".
I thought I might be able to find it in a library somewhere, but no luck there. It appears libraries generally don't keep these back issues very long.

Does someone have a copy I could get photo copied or scanned and emailed?

Thanks
Jim

Message-ID: <GQ73f.1$z21.0@dfw-service2.ext.ray.com>
Source record: 12764
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Hi all,

I shipped two boxes of amateur radio equipment yesterday from
Lewisville, Texas to Cooper City, Florida. As always, I used
FedEx Ground. Here's why:

Two packages:
(1) weight 33.60 lbs, size 24 x 21 x 16 inches, insured $900
(2) weight 13.95 lbs, size 22 x 22 x 14 inches, insured $100

FedEx Ground, delivery in 3 business days, cost $38.77
UPS Ground, delivery in 4-5 business days, cost $56.07

UPS would have charged $17.30 more than FedEx (that's almost
45 percent) and would have taken 1-2 days longer to arrive.
To me, $17.30 is not a trivial amount of money.

Something to think about next time you're shipping packages!

73,
Dean K5DH

Dean,

I have been using Fedex Ground and Home delivery for some time now after discovering the same thing you posted here.

You can print label and manifest using their web-based shipping manager and process on plain printer paper. The Web interface is a bit counter-intuitive, but usable.

I have accounts with USPS (Onluine Click and Ship), Fedex (Online Shipping Manager) and UPS (Online Web Interface). I use Fedex for most items over 5 pounds that won't fit in a USPS Flat Rate Box.

On the otherhand, in the last 2 weeks, I have had 4 packages delivered to me by FedEX Ground, and each arrived from 1 to 4 days later than the tracking system said they would. When the appointed day came, they just bumped up the delivery date to the next business day.

In one case, they lied about no one being home. At the time they said no one was home, I was sitting on my porch talking with a friend (and for 1/2 hour before and 1/2 hour after the appointed time.)

I have in the past had a number of crated packages delivered by FedEX Freight, and most cases, they completely and totally destroyed the crates. I was lucky to only have to replace one item from this damage. Once they delivered a 4'x8'x1' crate that weighed 600# in a small econoline van. They couldn't even get the crate out of the van without my help. One guy bloodied his mouth when the crate went over balance, and smashed his head between the crate and the roof of the van... All the while, the drivers young daughter sat on the front seat.

I have never had UPS miss the delivery time they said they would meet. I have never had UPS lie about delivery misses. And no matter how heavy the package, they always bring it to my door

(and use safe methods for moving heavy packages.)

To me, it seems that your luck with delivery is just luck of the draw.
I have a great UPS delivery guy. The FedEx guys are different
every time.

-Chuck

Hi,

Be sure to ask for indirect or direct signature for
fedex home, (fedex ground has signature included no charge)
otherwise they just leave the cartons at the door.

I've been using FedEx ground since they started the
service, 30% less expensive then ups and one day
faster transit times too.

UPS uses company drivers and FedEx Home uses
subcontractors/independants so they have less
overhead, so lower fees.

US Postal flat rate boxes are a great value
for most of the auction items I ship.

Don't spend a lot of money on those self adhesive
ship labels, instead use regular paper and get
one of those glue sticks that the kids use at school,
that turns your plain paper label into a stick on label
for a few cents !

Agreed.

Let me also say that, from my experience, UPS and FedEx Ground break things at about the same rate. But when FedEx damages something, they promptly inspect it and pay out without a fuss, while UPS will do almost anything to avoid paying insurance claims. Admittedly I have had only three UPS issues, but all were nightmares.

I would have to agree that my luck with UPS has been less than
satisfactory. but with fedex my stuff gets there a lot quicker and
costs less money. i have even sent msr 2000 repeaters across country
with fedex for only about 48 bucks, but if i sent them with ups, they
would be destroyed in no time. i have a friend that works at the local
ups and he tells me that the sure fire way to have something destroyed
is to mark it as fragile or handle with care. seems the guys in the
warehouse love to kick the hell out of boxes like that.

main reason We stopped using ups is their insurence is a total scam,
they put more effort into not paying than handeling it ligit.

Fed-Ex Ground has always welcomed packages from private individuals, while UPS would rather do business with business. UPS finally saw the light over the last year or two due to Ebay, but they've did too little too late.

I've used Fed-Ex Ground for at least 5 years since UPS started opening and inspecting packages accepted via their counters. The UPS counter folks around here are extremely rude... in fact one of them is so bad just mentioning her name to about anyone across the region who has been to their counter and they know who you're referring to. Go to a Fed-Ex counter and you're greeted with a smile. Also love their Ship Manager web processing. Even when there's a line of people at the Fed-Ex counter, just throw your packages on the desk... say "they're done"... and walk out. UPS lost my business long ago.

so true. the people at the ups place here are also rude, uncaring, and
obnoxious. one time they lost a package and the woman at the counter
was told by a friend of hers, "that guy sounds mad", to which she
replied, "oh yeah, we get them all the time", then laughed. well, i
made a really big stink about this and she was fired on the spot. then
it was my turn to laugh. i'm too always greeted by a smiling individual
at fedex. and the ups place here is only open 2 hours a day to accept
packages, which really sucks if you want to do business with them.

You must just be lucky in your location. As with most everyone here, I've had the opposite experience. The one that really sticks out in my mind was when I was watching the tracking data on the UPS website. The package was two (2) days beyond scheduled delivery, so I checked the site. Package was on time up until it reached the distribution center in, I believe it's Ohio, where, instead of shipping it to me, it was shipped three states over in the wrong direction, then shipped back to Ohio where it finally started it's journey back to me. Ended up being 4 days late!

There are many more horror stories I could tell, and not just my own. Friend of mine shipped a $1800.00 Home Theater Receiver (weighed between 50 and 70 pounds) from Michigan to California. Exceptionally well packaged, in original packaging, then double boxed besides that. When it arrived, the outer-most box was gone (it arrived only single boxed, beside the original), with the original label and remnants of outer box taped to the inner box. That box was mutilated, and the receiver? Well, lets say it had a nice "leaning tower" look to it, along with all but one of the circuit boards being literally shattered...

And then he had to fight for almost 4 months before he actually got his insurance claim. They were only going to give him a portion of the insured value, because they claimed that the contents weren't worth more that that. Well, it was, BEFORE UPS got their hands on it...

Perhaps, but they are also employee owners, so I think they do care about customer service more than you know. I have dealt with UPS in two different cities, and out in the country, and they have always done the great job for me. I am certain there are regional problems, I just haven't witnessed them here.

Could be, then I have been lucky in three different locations,
and for hundreds of packages, over more than 20 years.

HI, I agree!!!! I always use FedEx Ground. It IS much cheaper AND
faster than UPS.
OH, one more thing.
I truly believe FedEx treats YOUR package much better than UPS!!!
UPS does not seen to care much how much "bouncing" so to speak YOUR item
takes.
I'm sure every company has these animals dropping your fragile items.
Its just UPS stuff
gets broken MORE often.
THAT A BOY FedEX..... Put em out of business!!!!!!!!!!!!

UPS has been OK with me, except when you haver to talk to them
on the phone. In one case, they kept calling back to my house. I had
received one of their calls there while home for a doctor's
appointment and told them not to call there again. No such luck. Then
you can never talk to the same idiot twice. They introduce themselves
as "account executives", but these cheap-ass "executives" can't accept
an incoming call -- you get the luck of the draw from whatever
connects them.

Then the dorks go tappity-tap on their keyboards as you describe the problem, but the info never gets to the next dork you talk to -- it's a brand new day and you have to explain the whole damned thing again.

Last year, a friend was getting DSL and the equipment was UPSed to her. On delivry day, she looked at the website during the day (Friday). Late in the day, it was recorded as "no such address". She lives on a short stub (three houses worth) of a street which had a section removed for a throughway -- twenty years ago -- and half the time, they still lose it.

We then told them to deliver it instead to the UPS facility near where she worked -- on Monday, so she could pck it up at lunch time. I did that part for her. The wackos said they had to deliver to an address. I asked why they didn't know the address of their own facility ten miles north. So they changed their story to they couldn't just send it to another facility -- it had to be a house or business address. Since she had just started a new job and didn't want it coming to work on her third day there, I told them to just divert it to my address 25 miles farther north. They agreed to do that.

In the end, I went to her place to accept a completely different furniture shipment (real trucking company for this one) on Monday. When I arrived, the UPS package was sitting on her doorstep. To hell with any instructions UPS had agreed to.

Thirty of those bozos would have a cumulative IQ of fifteen.

A few years back, on salon.com, there was a story of a woman
who went to France and had a major museum ship a rolled-up picture of
a famous painting of a nude, to her son, a fine arts major, at home in
the US.

UPS in the US opened it, determined it to be obscene by their
standards and sent it back to the museum store.

The woman checked shipping policy with all the majors -- DHL,
Airborne, UPS and FedEx. All except FedEx said they'd have done the
same. FedEx alone said that, absent a court order, they wouldn't open
a shipment which was properly packaged.

Employee ownership is a crock of crap. If an average employee
were to do something which made the stock go up a dollar, he'd get
nearly nothing for his few measly (purchased) shares, but the fat cats
at the top would each get a windfall for their 200,000 (given to them)
shares.

Apropos rec.radio.*.* -- that's a hell of an amplification
factor.

I advise against this;
I did a mass-mailing using "glue sticks"
to attach the plain-paper mailing labels.
A large percentage of them fell off in transit.
Spend the extra money for good labels;
one lost package will cost a lot more than you save
using "glue sticks."
IMHO, of course,
Dave S.

I had the USPS return a package to the sender for "No such address".
My shop was directly across the street from the post office. It was all
you could see when you looked out their front windows, yet they couldn't

find it. UPS would leave my stuff at the wrong door, so if i was expecting anything I had to check quite often to make sure someone didn't walk off with it.

What about the "Union attitude"? Any problems that arrise are
attributed to management as they set the standards and rules. Bad
management equals bad employees. The Union employees at UPS are no
different than any other Union employee. All want their employer to
thrive and earn many dollars. They know that more profit is more pay
raise in future contracts.
NOYK in central Florida
UAW and proud
Buy US! Buy Union!

In the case of UPS it seems to have more to do with the shipper than anything else.

When I get heavy items from Fair Radio via UPS the box always arrives in pristine condition.

When I get similarly heavy items from random individuals the box is often nearly destroyed by the time it gets to me (and often the contents too.)

Admittedly at least part of the difference is the inexperience of J Random Luser putting a 80 pound radio in a lightweight box filled with styrofoam peanuts...

Tim.

Hi

Can any US readers of this thread explain why Fedex or UPS is so
popular compared with the much cheaper US Mail?

Here in Australia Fedex and UPS offer a service, but few private
individuals would consider using them due to high costs and the
inconvenience when delivery is a problem if people are away at work.
With normal post, we have post offices in all suburbs where
undelivered mail can conveniently be picked up or items posted.

I have never had loss or damage problems with ordinary mail to and
from the US.

Simon

FS: Collins RE 302C-3 Wattmeter NEW!!!
I just got this recently and it was stored away many many years
and it was in a heated place. It looks to be brand new.
Sealed all in plastic. With the coupler and cable collins papers
and tags all inside. Very rare to find one new.
I have pictures if you want to see.
Please make offer on this this find example of history.

>popular compared with the much cheaper US Mail?

Because for packages over about two pounds, US Mail is much more
expensive than the package companies. For light packages, just a
couple resistors or a tube, the postal service is usually a better choice.

For international stuff, I don't know. And I will say that the postal
service is not very good at paying up on their insurance claims either.

I've never noted anything like that.

Our UPS guy has been on the same route for over twenty years. He even brings dog buscuits the dogs on his route. He is friendly and courteous. For outbound shipments, I take UPS items to Staples.

One FedEx shipment for me was delivered to a neighbor who lives on a different road, a half-mile away. Airborne Express brought a fragile e-bay purchase during a snow. Rather than driving up my drive (which I'd done with a front wheel drive automobile, the guy placed the parcel atop my postal mailbox alongside the road where it could have toppled to the pavement or have been easily stolen by anyone.

Yes different parts of the country are quite different. I gave up on
UPS years ago because it was just to hard to ship a package with them.
I live in Phx and the nearest Depot was 15 miles away. From experience
on the receiving end thought I have had packages arrive in very poor
condition plus have had packages delivered to the wrong address. I have
shipped some items via FedX put from friend experiences collecting
insurance on an antiques or old boatanchors is very hard. If an item is
extremely height it will go FedX. Being I do not ship all that much but
more than the most people I find shipping via the USPO the easiest and
most friendly. There Priority boxes and Flat rate Box services can not
be beat. If I was a business then I expect I would be using UPS and FedX.

Back to boxing for my next run to the USPO,
Ron WA0KDS

Yes, they appear to sort packages automatically by ramming them off one
conveyor belt onto the next (which happens to be 3 feet lower). I think
they also throw stuff off lorries onto concrete - it's the only way I
can imaging the damage to a near mint and well packed WS19 having
occurred, which is why I will NEVER use nor recommend UPS to anyone.

Postal US now has flat rate boxes priority mail,
$ 7.85 for up to 70 lbx, check it out http://www.usps.com
priority mail flat rate.

UPS, FedEx and DHL offer insurance $ 100 value included in the rates
and are reasonable for more expensive items to insure.

Yes, the insurance at ups is to insure they do not pay the claims.

Postal US mail is more expensive to insure.

OTOH, I get shipments from aes in milwaukee just fine,
fair radio (super pack jobs at fair prices) also.
Those overcharger on ebay shoud take a lesson in packaging from fair radio !

Only had on problem with ups, they did not get signature and I paid for it,
so I called to get them to credit me for the fee and they sent the driver
out the next day to get a signature. what a joke, I protested the fee
on my amex card and they had to refund it. Signature at delivery,
not after delivery.

UPS and Fedex counter people are great in my area.

I had a nice experience with AE once, and only once. It's the one and only time I ever received anything through them. Great record in my book, (0 for 1)...

Received an eBay package. Not too big of a deal, wasn't worth much, but they delivered it to the wrong address. Was delivered to the neighbor across the street, on a Friday. They were gone all weekend, so it didn't get to me until Monday. Worst part, it was on their doorstep, wasn't put in the porch, and it rained the entire weekend. Box and contents were so saturated with water, the neighbor barely go it to me without it completely falling apart...

Worse yet, the label was made out to the proper address, their tracking site indicated the proper address, but when the driver logged the delivery, he even indicated that it was delivered to the wrong address. He wrote the address he dropped it at, instead of the my address; how blind can you be?!

If only the shipper would have given me the tracking info, I could have gone across the street and gotten it myself before it got too wet, but they were apparently too lazy to email it to me, so I didn't find out until after I got the package from the neighbor and looked up the tracking info online.

And sometimes it's the gremlins. Two horror stories:

1. Six years ago I shipped an AEA TNC to Timewave for an upgrade,
UPS insured. It was well-packed - I've spent many years doing
domestic and overseas packing of fragile household goods and
electronic equipment (and during the 1967 War a commercial ocean
shipper hired me to so some of it because his regular staff was out
doing military service) so I DO know how to pack well. Timewave
reported that the knob and shaft on the only front-panel control was
bent and had to be replaced. Fast forward to last year. I had to
ship another TNC to them, and mindful of the first experience, put
TWO INCHES of snug-wrapped bubble-pack around the instrument, then
two inches of sheet foam around that. I swear - the packing must
have weighed as much as the instrument. You guessed it - Timewave
reported that the control was damaged in shipment although the box
and the packing was intact.. Go figure.

2. Quite a number of years ago I had a commercial art framer send a
one-of-a-kind drawing cross-country to a friend of mine for a
special birthday. It went UPS insured. When it arrived, my friend
reported that there was a small crack in the glass frame and I
reported that to the shipper. They made arrangements for UPS to
return the item for re-framing. When it arrived back at the framer,
the package looked like someone had used it for a tennis racket.
The drawing was destroyed, and unfortunately the artist had passed
away and very little of his remaining collection was "on the market".
We did manage to get something not really that close, but the
"specialness" of the event was completely ruined. I don't know
who they used to ship the second time but it got there with no
further incidents. Because the shipper guaranteed the shipment, I
left it up to their lawyers to haggle with UPS.

The only problem that I've had with the local UPS delivery here is
that he leaves the package and rings the bell, and then it's a race
to see if I can open the door before I see The Big Brown Truck drive
off.

Sounds like bovine excrement to me. I have dealt with companies in the past
that always found certain things "broken" on items returned for repair,
even when they weren't. It is a great way of bringing in a little extra
money, and the customer has no way of proving the lie... well, unless
the company tells the same lame story over and over again like Timewave
appears to have done.

>

> reported that to the shipper.

I'm betting this wasn't packed the way UPS says you should pack fragile
items: double box, 2 inches of packing around the item, and 2 inches of
packing around the inside box. You cannot just throw a glass frame into
a box, and fill the box with peanuts, and expect it to survive. The
frame needs a single wrap of thin foam (cardboard thickness), a piece of

wood, or masonite front and back taped firmly. This should then be placed in a sealed plastic bag. This composit should be wrapped loosly with 2 inches of bubble wrap, and boxed. The inside box should then have another 2 inches of loosly packed peanuts. You can set the stage for a great amount of damage to a fragile item by simply packing the peanuts too tightly in the box.

I have *never*, repeat *never* had a problem with UPS damaging an item that was properly packed. On the one or two occasions I have had a damage problem, the items were heavy, and were tossed into the box, with a little bit of crumbled newspaper thrown in on top to fill up the empty space.

Or someone has shipped a BA that originally was shipped with the transformer removed, with the transformer installed... stupid stuff.

That isn't UPS's fault, that is the shipper's fault.

UPS moves quickly, packages literally fly through their hub. UPS gives recommendations on how to pack to survive. If you don't follow them, you are taking a very big risk. FedEX's ground operations are identical to UPS's. FedEX's air freight operations gain some protection from damage by forcing you to use their standardized boxes.

-Chuck

Back in the minicomputer days, we had a disk drive for a DEC PDP11-70 on order. In those days drives were large and heavy, and a single drive might take up one-third of a rack. Well, the freight truck driver pulled up near the loading dock, opened the rear doors and backed the semi up to the loading dock. The driver got out again and looked around for unloading help. Not finding any help, he climbed inside the trailer and rolled the 120 pound crate out the back of the truck and down onto the loading dock. The height difference between the floor of the trailer and the loading dock was about four feet. The driver pulled forward, closed the trailer doors and drove off. Needless to say the drive didn't work, and the shock detector inside the packing crate indicated the drive had suffered at least one large impulse during shipment from the factory to the customer.

I have two 6M Gooney Boxes that I will soon be putting up for auction on eBay, before I put them out into the trash. I consider both of them to be in restorable condition with a little work. I even have 2 sprare 2E26 tubes that will go with them.

I really don't want to pack and ship them, so if you are interested and live in the greater Boston area, contact me my email at hhc3141@yahoo.com. Small bucks will take both!

The cost of the replacement of the control was included in the flat
advertised price of the upgrade so a) it didn't cost me anything and
b) they would have lost money by "just doing it" unless necessary.

>I'm betting this wasn't packed the way UPS says you should pack fragile
>items:

This was done by a commercial art framer and shipper who ships
fragile and valuable artwork all over the world. I'm sure that they
knew what they were doing. The problem wasn't the way it was
shipped by them - a small crack can result from many causes
including stress relief in the glass - and is no big deal compared
to the condition that it was returned in. We had the "as arrived at
consignee destination" pictures and the "as received in return by
original shipper" pictures to prove it.

The bottom line was that UPS figured that this would be covered by
the shipper's insurance so they didn't give a flying fig about
what happened to the package as they repacked it (by their own
request) and returned it.

>UPS moves quickly, packages literally fly through their hub. UPS gives

A former neighbor retired as the regional UPS customer service chief
some years ago. The stories she told after retirement which were
similar to mine would make your hair stand up.

Perhaps they now have a better grade of handler ???? I seem to
feel that they have a better grade of delivery persons over the last
decade.

>FedEX's ground operations are identical to UPS's.

FedEx Ground is the former RPM. I have never had problems with them
and lately have done most of my business with FedEx.

>FedEX's air freight operations gain some protection from damage
>by forcing you to use their standardized boxes.

Never had problems with them.

Ya wanna know my gripe with both of them?

I live in Puerto Rico USA and neither of the two will treat this
location as domestic USA. Its International Air pricing right down the
line and discounted "ground" services are not offered.
The Postal Service doesn't have this lack of imagination and gets
"ground" (Parcel Post) here with sea shipping in a few days at rates
parallel with anywhere else in the US.

It is an interesting gripe. The Postal service is US government subsidized, UPS and FedEX are private companies. Why should they charge you anything other than what it costs them to service your location? They charge everyone else a rate that is graduated based on distance traveled.

In fairness there are actually import 'technicalities' for shipping certain items to PR and implications of the local tax structure, not unlike the Canadian scenario. Not that they do a good job with the Canadian market either. But UPS/Fedex/etc simply refuse to equally service this market of 4 million US people and the sellers/vendors that have obliged themselves to shipping ONLY via UPS/Fedex wind up refusing our patronage.
I can't imagine them (or the affected vendors) telling everyone in say, the Toronto market, that "sorry, we don't serve that area" but thats the case here and I know Alaska and Hawaii suffer much of the same.
Kinda screwy but thats why its MY gripe! The thieving bandits at USPS work great for me...who needs those others? USPS will get a package to me from NY as cheap as it will get it to California, and often, quicker.

That was decided years ago. Numerous friends who work for UPS
tell me that, maybe ten or fifteen years ago, the beancounters figured
the extra deliveries that could be made instead of waiting for sigs
would easily cover the cost of stolen-off-the-doorstep shipments.

A friend told one of these people that a $600 antenna had been
left in plain sight under his exterior stairway and it might have been
nice to claim it wasn't delivered so he could have a spare for his
summer home.

But they have this wacko deal where it's at the driver's
discretion as to whether or not to require an adult's presence and
sig. I once had some computer books shipped from Amazon. I came home
to a yellow sticky saying the package had to be delivered to and
signed for by an adult. I called about it. No reason was given, but I
was told I could not just sign the yellow sticky and leave it on the
door.

Since the UPSsholes only work when I am at work, I had them
divert the shipment to work, hoping it wasn't some porn mis-shipped to
me for the amusement of the mailroom staff.

It was just my Amazon order, so I called UPS to ask what the
hell was up. They said the driver could make the non-overridable
judgement to require adult presence and sig. The nest they could guess
was that there might have been thefts of packages in my neighborhood,
so he decided to lay on the requirement.

Not as serious, but I once had a drive about 2x3x4 feet in
size merely dropped off by UPS on an unattended, open loading dock --
no signature taken. That was on the shipper for not requiring a sig.
But it stood on the dock, only occasionally attended, for another
three days, with no notice to me -- my company's bad. When I fnally
called the vendor, they chased it down (pre-tracking-website) and
found it had been delivered three days earlier.

Dumb vendor -- when we later replacd a line printer with a
faster one, they were supposed to come and pick up the old one. They
screwed around for four months and finally came around for the
printer, on the third floor of a three-story building. Ha-ha -- by
that time, the freight elevator was out of service for a couple of
weeks for re-building. The vendor had to hire another outfit to come
out with expensive equipment capable of walking a heavy printer down
two wrapped flights of stairs.

Now it's 150 lbs except for Hazmat which is still 70 lbs.
I deal with UPS daily and they SUCK!!!!!!!!!!!!!!!!!!!!!!!!
Hazmat non-conus is generally sent Fed Ex and I use them everyday.
Given a choice I would ship DHL or Fed-Ex always!

I have checked the UPS Tracking system for all deliveries made when
I wasn't home and quite a number of them state "delivered to
addressee" rather than "left at destination".

Truth or consequences.....without a requirement for a sig, guess who
always wins.

I won't deny it!

Now, if you want my honest assessment, I find the whole thing fraught with ethical questions.

What if someone isn't listening to the radio when the message is broadcast? What about the people who don't live near railroad tracks?

If this thing is to *actually* work, it would have to be space based. Work with a database of the frequencies in use in the affected areas. broadcast on them as the need arises. FM will be easy. AM will be some more work. Of course you'll still have to deal with the people who aren't listening at the moment!

Of course if it just a research project to burn up some money, then *that* is a different subject altogether!

We switched to fedex 2 years+ ago, no complaints.

ups drivers are nice guys (they still bring stuff here, and pick up on
ocasion) but the company (mostly insurence issues for us) sucks.

from my experience, they treat every insurence claim like fraud on the
part of their customers.

used ups for international shipments at the req of customers, they
messed up more times than not.

Space-based wouldn't work. You can't get a spot footprint small enough on
the earth's surface to make this do-able. Iridium comes about the closest,
but would you put up a constellation to provide the footprints and not use
it 99.999999999% of the time? :-)

Cheers.

Ken

From: Richard g4tut <g4tut@southgatearc.org>
Message-ID: <n4k5l11n6dhtr032446pev32c0s78m88kf@4ax.com>
Source record: 12740

There is a free competition running on the Southgate Amateur Radio
Club's website.

The prize is a brand-new Icom IC-V82 high-power handheld transceiver,
kindly donated by Icom-UK Ltd

To enter the competition, you just need to answer a simple question.
The competition page can be found at:
http://www.southgatearc.org/competitions/ic-v82.htm

The competition closes on the 4th January, so there's plenty of time
to get your entries in. You can make one entry per day.

Good Luck!

This is an Armada 1560DM K6/2 200mhz, 96m memory, 4g hd, 11.5" color screen, usb, modem, sound and all other ports. Has a CD and floppy built in. This is an all in one form
factor, drives stay in together. Non of that dumb swapping. Comes with power cord and a very good battery.

Price: $150 obo plus shipping. I prefer paypal. Add 3% for fees if you use that service.
I will also take Cashiers Checks or Postal Money orders.

Thanks. Juan

You obviously missed the part about this being for the discussion
of amateur radio equipment.

Despite the ads, this is not a buy and sell newsgroup.

You've blown it twice, by placing an ad, and by trying to sell
something that isn't even a piece of amateur radio equipment.

In his defense, when I look back at the last year of posts to this newsgroup, 90% are for audit and for sale. So if it wasn't intended to be a for sale newsgroup, that is certainly what it has become.

As far as a laptop. I think that is close enough to pure ham radio equipment to be discussed here. I am in the process of getting a used laptop specifically to be used to program my Kenwoods, and nothing else. Call it what you want, the laptop will be an integral part of my ham station.

It's not only cheaper to use FedEx they do a better job. We ship computer equipment all over the USA, i.e. will build the Conquest Systems :-) The guys at UPS kick the boxs all over, the guys at FedEx carry them. When we used UPS about 8% where damaged on delivery with FedEx less the .01% of .01% get damaged.

I'm looking for an original manual (or quality copy)
for the Heathkit GW-22A c.b. radio. Do you have one
that you can part with, or let me borrow to make my
own copy of?

Yes, I'm aware of the MANY on-line vendors who sell
manuals, but I'm just not interested in paying $20
plus postage for a photocopy. I'm hoping that one
of my fellow radio enthusiasts will have the manual
and be willing to help me out. That's what we used
to do... before it became all about the money.

I've been able to 'revive' some keypads by pulling the keypads out (a mission in itself in a HT!) and disassembling, and then using a toothbrush and meth's or probably better yet a contact cleaner on the PCB tracks (I'm assuming here that it's the sort of keypad which has the switch traces on a PCB and a small conductive 'button' within the rubber membrane that goes over the PCB. Also clean those 'buttons'; I've used a soft cloth with alcohol or it they're really dirty a brush again. I've always erred on the side of caution and not gone to town on the bits in case I scratch away any protective layers and hasten the corrosion that I'm trying to get rid of.

Cheers.

Ken

????

Are you trying to program the radio? If so, there are better ways
than slaughtering the personality board to do it.

If you need a programming cable, I may be able to help. I
periodically get the raw materials to make such, then I do so and put
them up for sale on greed-bay. I usually price them around $40 or so.

Alternatively, if you need programming and bench-test services I
can help with that as well.

http://www.bluefeathertech.com/rf.html

Keep in mind that if you're trying to squeeze ham frequencies in
there, programming is only half the battle. Unless you want your
receiver to be "deef as a post," you need to retune the preselector
using a spectrum analyzer and tracking generator. It's a time-consuming
process (usually takes about 45 minutes or so to set up and get it
right), and not one that one should attempt without the proper test
gear.

Happy tweaking.

Wanted a D-104 non-amplified or a Shure 444, not interested in
collectors condition, just as long as it works I dont care what it
looks like.
Please email me direct, thanks.

Gil

Source record: 12613

Thanks Anton. Yes, I understand the programming and tuning process.
I'm trying to 'disassemble' the plastic molded connector at the end of
the radio wiring harness. This connector attaches to the radio itself.

The goal is to solder an ethernet pigtail to programming signals. With
this done, I should be able to connect to the radio with a standard
ethernet connector. The ethernet cable will connect to the RIB box
with an RS-232 on the other end. I could alternatively purchase a "T"
connector, but I heard these are expensive.

If someone has sucessfully taken apart the molded connector and
re-assembled, I would like to hear the results.

Thanks,
Nick

I would be interested in hearing a recommendation for a charger for
lead acid batteries.

I am looking for a charger that gives an indication of charging status
(no idiot lights please), capability for flooded cells, sealed lead
acid and any other options you have found useful.

Also, what do you use to charge your lead acid batteries?

Thanks

TMT

This will also depend on the application of your batteries.
Will they be deep cycled often?
Will they just sit on flaot charge except for emergencies?
Will they be a room temperature always?

Usually reliable sources for roller inductors are:
http://www.fairradio.com/induct.htm
http://www.surplussales.com/Antennas/TransVarInductor.html

You might Google around for them too... Just search for "roller inductor".
Ebay can sometimes be a great source for oddball stuff.. Ya never know!!!

Actually, those questions really don't have much bearing on what charger
you want. You want a 3 stage charger that can handle your battery type,
and ah rating.

You can see schematics and chassis top views of the two transmitters by
scrolling down at:
http://www.virhistory.com/ham/kits.html

The only major difference that I can see is that the T-150A has trimmer
capacitors across L-2 and L-3 in the VFO -- probably to try to help with
VFO stability (notoriously drifty on many T-150s). There may be changes
to some of the other component values as well, but they weren't
immediately obvious.

It is impossible to all of those conditions. They can't sit on flaot all the time and be deep cycled frequently. These situations are contrary.

If they just sit on float all the time a simple float set voltage regulated charger with equalize (manual or peroidic) will do. Current limiting is a pretty good safety feature to have also.

If you deep cycle you batteries you may want a charger that adds "bulk" and "fast charge" rates as well.

If you batteries are in an uncontrolled temperature (as mine are) then you will also need temperature voltage compensation. 0.17% per degree outside of 25 deg C. (depending on type) This means at -30C you need to equalize your 12 volt bank at 15.7 volts. OTOH, this voltage will boil your 12 battery dry in the summer.

I am not familiar with smaller battery charger brand names or features for alternative energy usage.

You don't say what AH rating your batteries are but for my pair of
deep-cycle flooded batteries in my RV I use a homebuilt three-stage
charger.

Most (all) of the commercially available crap uses switch-mode
conversion/regulation that generates gobs of EMI/RFI.

I built a 30A, three-stage analog charger. Not wanting to reinvent
the wheel, I used an Astron RS-35M power supply

http://www.astroncorp.com/linear.shtml

for the transformer/rectifier/filter/pass trasistors and an A-A
Engineering

http://www.a-aengineering.com/

"smart charger" board that I modified, for charge control. The board
uses the Unitrode (now TI) UC3906 IC

http://www.ti.com/sc/docs/psheets/abstract/apps/slua115.htm

that is specifically designed for this.

Sorry, there are a couple of idiot lights, but the supply also has
honest to goodness meters too.

"HD-Ready" means HD TV sets without ATSC (or QAM) tuners. The OP
didn't say, but I suspect that TMT is looking for a portable HD TV with
an ATSC tuner to pick up the local digital broadcast stations. I have
not heard of any such portable HD TVs with digital tuners on the market
yet. If the TV is for an RV, the only option may be to go for a portable
HD TV (15" widescreen is damn small however) and buy a ATSC tuner set
top box for it, but the ATSC STB will require AC power.

Not to slam your suggestions, but man is it sad what is being passed off as "HD". All the sets mentioned are 4:3 AR, the first on the list even has a native res of 640x480! It seems like such a shame to start with such a small monitor with low res and then lose so much real estate by displaying 16:9 HD on it. "Pimp my ride" put a 40"+ plasma set in a VW bus, I'd tend to think a little more on that end of the size spectrum but not so extreme.

I've looked all over for about a 20" HDTV with builkt in tuner and came up
empty, so I just decided to order an HDTV tuner for my PC. It's a heck of
lot cheaper too. This would seem to be a perfect solution for an RV.

Before: http://users.triconet.org/wesandlinda/Figure_1.jpg

The circuit board has the 723 and other low power stuff and is removed
and discarded.

After: http://users.triconet.org/wesandlinda/Astron_A_A.jpg

This is not quite the final view. When I took this, I had yet to
receive the precision power resistor that I needed for the current
sampling shunt and was using the DC resistance of a piece of wire for
that.

Sorry no write-up or schematic at this time. I thought about doing it
by saw no market for an article.

Also, consider that this is set up for one max current condition that
is related to the AH rating of your battery and what fraction of same
you want to charge at. I have some ideas on how to make this
variable, but have not implemented them because this design fits my
requirements.

If you decide to use a '3906 here is a little spreadsheet I threw
together to calculate resistor values, etc. Disregard references to
"equalize voltage" as this is not a function of the IC.

http://users.triconet.org/wesandlinda/BatteryCharger.xls

The stuff in the blue boxes is for user input.

Another vote for a 3 stage charger. But for best lifespan I'd shallow
cycle occasionally so the battery gets a topping charge (say a 30%
discharge every 3 months). See:

Radio Specialty Model 1179-22-1 Repeater----------------$ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed, but inside is very clean!
Repeater is in a wall mountable battleship gray cabinet,
that is 4" deep by 13.5" wide, by 21.5" tall, and is
around 30# in weight. It is a VHF base/repeater used by
the BLM out west...
It also has on the front cover, I-5YACC, then under it is
271, under that VHF REPEATER. There are a lot of FCC type
acceptance # all over inside, plus the maker, and maker's
partial address, and part # for transmitter, and receiver
sections.
NO documentation.

2 Kenwood TR-7950-----------------------------------EACH-$ 80
Each comes with mobile mount, and 1st sale gets the
packet adapter. Are in very good shape, but do not include
the TU-79 PL boards which are available at www.piexx.com
They will not come in original box, and if I do not have
the manual, I will photocopy, or pdf one (your choice)...

Standard C468A LNIB-------------------------------------$ 75

LinkXcel PS-141B 4 port KVM Switch with 4 cables---------$ 65
-Like New- This is the PS2/VGA model -No manual-

Pioneer DRM-602X Scsii cd changer that uses Pioneer------$ 15
audio cd carts.

All items will include manuals unless noted.
Shipping is NOT included on any item(s).

Pictures of some radios can be found at www.mantico.com/4sale.htm
I will have all items on line as soon as posssible.

5239. 02 Grand Cherokee, IC-208H, antennas, mounts... sugestions?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-24 16:57:40 UTC
From: rjvalenta@yahoo.com
Message-ID: <1130173060.628631.37190@g44g2000cwa.googlegroups.com>
Source record: 12562

Hello all, I got my ticket over 10 years ago but until recently never started to take things seriously. A no-code tech, I'm now studying for my 5wpm test and hoping that I can expand past my SW radio over time. For now, I'd like to move past my old Alinco DJ-580, and get myself something mobile for the around town communications during drive time.

Here's where I sit - I wanted a dual band radio that I would also equip as an alphanumeric scanner - I didnt' want to end up with 5 full size radios strapped across the underside of my dash, but instead a simple mount of a detachable face that could be easily read. I think I've found this in the Icom IC-208H, it can hold a lot of memories, and has an alpha display so I can easily view who I'm listening too. I've seen some good reviews on eHam.net, so unless someone has other ideas, I think thats where I'm headed.

Next - and what appears to be the bigger problem - the antenna. At first I was thinking I'd just go glass mount, but since then I've read articles about their poor performance and concerns about their operation through modern car windows that are often tinted with metal. I was unable to find any information on the 02 Cherokee to see if it had the bad kind of tint, but other postings I read about guys who notice no change in results after losing the glass-mount whip, and the 208h's 55w output (and my being unable to find a glass mount that could handle more than 50w) cause me to think that wasn't the best route.

>From there I thought about Comet's EX104B, rated at 100w it was small and could do the job - then the mounting became the issue. The 02 Cherokee is SEVERELY lacking in 'lip' locations to mount an antenna. The rear door opens and its top side folds inward in a way making a lip mount impossible, and the body/roof side has no lip at all. I thought about using the lip along the side edge of the rear door with a Comet CP-5m mount, but the way the rear window glass sits over it, there's really no way I can see to attach a mount to it.

So, I'm back to glass mount (and hoping the extra 5w doesnt kill it) ---- unless I want to go with a mount for a luggage rail, or drill holes.

No holes.

And I'm not wanting to the the luggage mount because I don't want 18 inches of exposed wire out side my car - which is why we're also not going mag mount.

I had thoguht of the 'window clip' that I saw at Universal Radio, as it seems like a good way to get an antenna into a location where you'd use

a glass mount, but has an actual wire - however I havent been able to find any opinions on it. I also found what I thought was a Larsen mount that was adhesive, but haven't found much info on that either.

So, I'm looking for suggestions on mounts and antennas - heh, and if any of you have put a remote head radio in your 02 Grand Cherokee, send me a pic of where you mounted that head! Any suggestions on any of this are appreciated, and info on posted pics of installs encouraged - thanks again.

Richard

I used a glass-mount on a rear, side window of our '93 Jeep Grand Cherokee for several years. Worked great. Just make sure you use a quality glass-mount (Larsen) and avoid any dark band in the glass. I have been operating mobile for 54 years so have a wee bit of experience with mobile antennas.

I'll look into the Larsen glass mounts - can they handle the 55w output
of the IC-208h?

Hello,

I just earned my ticket and have been researching IC-208H installations
for my '98 Chrysler Sebring coupe. As for antenna mounts, I don't know
of one that will help you. For the display mount, follow the link below
for several mounts that don't require drilling holes in the dash.

http://www.lidomounts.com/page/page/1478816.htm

For the main unit, it can be placed under your seat or tucked away under
the dash or in the trunk.

Later,

I use a Comet RS720 mounted on the rear of my hood, across from
the broadcast antenna, along with the SB12 dual band antenna. I
can't remember which cable assembly
that I used, but probably 3D4M.

In the motohome, we mounted the display unit on the dash with
wide velcro strips.

It's rated for 50 watts, which is probably conservative. I don't
think it would be a problem.

Andreas-

I found a schematic and an owner's manual listed at
http://www.mods.dk/

You can find it if you first choose on ICOM at the left side of the
screen, and then choose MANUALS near the top of the right side of the
screen. The IC-27A is quite a ways down the list.

I downloaded the schematic, which was just over a megabyte. It shows
everything on one page, which you probably couldn't read if it were
printed on an 8 1/2 X 11 page. However, it has sufficient detail if you
zoom-in to a higher magnification.

My wife has an IC-208H in her Sebring Convert and loves it.

We use mag mounts on our old Cherokee, and everything else for 20 years.
There is plenty of coupling at VHF/UHF for them to work well..

Would like to thank all those who replied to me direct and I have found a service manual now. Also found the sevice manual for my IC-2720H as well. So many thanks to all. Now comes to hard part of diagnosing the IC-740, it works fine on all bands but the 10 & 15 meters and it won't receive or transmit on either band. I suspect that the PL is going out of lock but without the manual I couldn find the voltages that were needed to be checked.

thanks again to all

hello
hear term all the time now on e pay,
so what the heck does "powered up" realy mean

when I worked microwave radio relay
if some thing powered up
it meant turned it on and it worked

now I don't quite understand what anybody
means by powered up

turned it on and nothing happend ?
turned it on and smoke came out ?
turned it on and it went ohoooa ohoooa
till 20 amp breaker opened ?
turned it on and it worked ?

Don't know where you got this phrase from?

> when I worked microwave radio relay
> if some thing powered up
> it meant turned it on and it worked

I agree, but it IS possible for something to power up and still
not work correctly. I just sold a Radio Shack DX394 which
powers up fine (lights, display, audio all worked) BUT the
RX sensitivity was way down.

> now I don't quite understand what anybody
> means by powered up

Without the added comments (like poor sensitivity in the
above example) it's meaningless.

> turned it on and nothing happend ?
> turned it on and smoke came out ?
> turned it on and it went ohoooa ohoooa
> till 20 amp breaker opened ?
> turned it on and it worked ?

As my auction plainly states, the main fuse blows when
turned on.

Hope that helps....

Tedd, VE3TJD

MFJ sells all of their antenna components a la carte -- they're shown
in their 2006 paper catalog, pages 58-59. I believe you can download
it from their web site. Part 404-1060 comes pretty close, $53.60

From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <ivQ7f.7$UM1.2@dukeread10>
Source record: 12594

I have a Yaesu FT-847 Transceiver for sale and a FC-20 auto tuner. The
FT-847 has been used only a few times and has the original box, manual, mic,
power cord and misc. stuff that came with it in a plastic bag, never opened.
The FC-20 is brand new. It is still in the original box and has the manual
and the connecting cable fort he FT-847. It has never been hooked up. This
gear is spotless and is in perfect working order. Price for the FT-847 is
$1135 and the price for the
FC-20 is $185. Price for both is $1295. Prices include shipping via ground
in lower 48. Thanks, Charlie Hugg, K5MBX.

| Look on Amazon. These are all under $500.

NONE of them are genuine HDTV. These are just HD-ready or ED-ready.
NONE have an ATSC tuner so they require an external STB tuner to get
HD broadcasts (which will subsequently be reduced in quality to fit
the 4:3 screens they have).

Note that an external tuner may be fine for a large screen home theatre
system, but they are inconvenience for a portable.

The ideal portable TV will include a 16:9 screen, ATSC/NTSC tuner (for
North American markets), and correct handling of all ATSC formats to
be sure resolution is never any less than what that small screen can
show (it won't be anything like a large screen, but that is no cause
for dumb engineering that downgrades video below the 480 size before
displaying it). An integrated Blu-Ray DVD player would also be nice
when that technology finally makes it to market. The ability to also
handle 576i/p, 25/50 fps, DVB-T, world channeling, and 100-250v power
in the mains adapter, would be a big plus. Cable TV (QAM) would also
be a plus for many people.

| Sharp LC-13B6U-S 13" AQUOS HDTV-Ready

The aspect ratio is only 4:3. The tuner is only NTSC (no ATSC). Apparently
it can do "HDTV" only via video input, up to 480p (really just EDTV). but
it can do PAL and SECAM (maybe only via video in).

| Zenith Z15LA7R 15" Flat Panel HD-Ready LCD TV

This one is also 4:3. No mention of a tuner is given, but no mention of ATSC certainly indicates it has no such capability.

| Philips 15PF8946 15" HDTV-Ready Flat Panel TV

Another 4:3 unit. Again, no mention of ATSC. This one does have an FM (radio) tuner.

| Sharp Aquos LC-15B9US 15" HD-Ready LCD

I see no "LC-15B9US" but there is a LC-15B6US at Amazon. It says ED-ready (not "HD-ready") and appears to be a larger screen version of the LC-13B6U-S.

I have a very nice Kenwood TS-530S Transmitter with a CW Filter installed.
The transceiver has full output power and works fine in everyway.
It looks good too. Front Panet is great and the cabinet has one small chip
on the top, otherwise, great. I can send some digital pictures upon request.
Price is $325 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

Source record: 12652

Parting out 3-1000Z 80-10M homebrew amplifier:

2 good tubes, one Westinghouse, one GE; no discoloration, 2kW+ out with 3600V

L-4B plate xfmr, homebrew rect/cap/equalizer-bleeder combo, 2600V or 1900V, 800mA

Peter Dahl 7.5VAC 30A fil xfmr

Peter Dahl filament choke

B&W 85*2* tank, 80-10M as-is. I have a homebrew extra contact so that 160M is possible.

UCS300 vac var & turns-counter

2200 pF loading cap & reduction drive, unmounted

160-10M bandswitched inp ckt: separate coils and fixed caps for each band

Simpson 1-amp plate & 500-mA grid meters

Originally built in 1970's, sorta patterned after BTI 3-1000Z amplifier. Both chassis have hardware-store perforated-aluminum covers. These components are assembled into 2 chassis. The ps chassis has the transformer, step-start, rect-caps, HV cable, and control cable. The rest of the components are on the amplifier chassis, except for the unmounted loading capacitor and reduction drive.

I'm getting old, tired, and indolent, and am going to buy a commercial amplifier, probably an Ameritron of some sort to get QSK, to complete my conversion into appliance operator ;o)

Sri, I'm a dinosaur, and don't have a digital camera.

Pls make offers on parts or all.

If you want it all, remember shipping is at least $100 gnd-insured in at least 3 packages.

Hi,
I am looking for a KWM2A working or not. I prefer a cosmetically clean radio. Also interested in a 516F-2 power supply and 312B-4 station console.

I used to work on these in the Air Force back in the early 70's. I have a KWM-380 and wish to add to my Collins station.

I can be reached at 513-683-2676 evenings EST or by email. Please remove the xyz characters from the email address shown in this post if replying by email.

Thanks,

Jack WB8BFS

Source record: 12658

Thanks guys!

I've found the manual and schematic from mods.dk.
However, the schematic doesn't seem to match the radio.
For example, the schematic says that the value of R67 is 1.8K.
When I measure it (on the PCB) I find it to be only 30 Ohms.
It shows R64 as a 5.6K resistor, but it's actually a 22 Ohm resistor.
Am I missing something here?
If anyone knows the value of R67 (it's burned so I cannot read the
colors),
please let me know.

cheers,

Andreas

I would have to agree....and so why I asked the original question to
see if I was missing something offered in the marketplace.

I guess one just needs to wait for the manufacturers to offer the
product for a market segment they have yet to address.

Xact Communication Visor Satellite Radio Receiver AXTR3CK?

What is the necessary power supply for this unit? Is the power
requirement met by a standard ac inverter at 300ma or 600 ma? Or is the
power requirement proprietary?
does wal carry the inverter and is that a reliable combination?
what's the story on the 21' ant.? is this a 21' typo? or is the
satellite in the wrong orbit?

i asked in other forums without reply.

5293. TS-830S Power Supply Follies

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-28 16:59:32 UTC
From: George <k9zu@hotmail.com>
Message-ID: <1130518772.290187.84290@g44g2000cwa.googlegroups.com>
Source record: 12666

Hello, All...

My Kenwood 830 has had an intermittent power loss which is now permanent. The main symptom: even while tuning, any drive increase will cause a rapid drop in plate voltage from 800 to around 500 volts, with a terrible hum. I don't want to tear components out just to test them, but a Cap. tester shows 47 mfd across one of the big 'lytics, and around .1 mfd on the other. Just for grins, I tried the same test on my [functioning] TS520, and got strange readings there also. (Yes, I realize I am trying to analyse a network by not extracting the component physically.)

The power problem is identical with other driver and final tubes.

These big 'lytic caps are now discontinued.

Sound familiar?

5294. Kenwood TS-950 serial numbers

Is there any way to determine the approximate date of manufacture from the
serial number
of a Kenwood TS-950SDX. I've seen serial numbers starting with 70(million)
and 80 but I've also seen serial numbers starting with 00. Can anybody help
with dates?
Thanks,
Bill S

I have an Icom 756 ProII for sale. This one has low hours on it and looks new. There is not a scratch on it. It comes with the original manual, hand mic, power cord. and shipping boxes.It works perfectly, except the Auto Antenna Tuner will not stop tuning even when it shows little or no SWR on the meter. It just keeps trying to tune. It always tunes down to low SWR , but just wont quite. I don't thank that it is a major problem, maybe a simple adjustment, but I am not going to mess with it. Price is $1450 shipped via ground in lower 48. Thanks, Charlie Hugg, K5MBX

The DTV standard for over the air broadcasts requires a good and stable incoming signal from the antenna. In the RV if you are parked and can orient the antenna you should be fine. If you want to use it while driving, it is not going to work. There will be too much 'ghosting' of the incoming digital signal and the tuners won't handle it well.

I am not certain there will ever be a market segment for what you are searching.

I consider it to be a faulty standard.

Do you remember the early portable CD digital audio players?

Remember the skipping?

Note that manufacturers had to build buffering and better pickups to
take care of the problem.

Same evolution with video.

Kids are in the back of the SUV/RV watching digital
televison...dropouts, ghosting, etc....guess what..manufacturers will
be forced to provide the service the customer demands.

Until then I and many others won't be spending money on DTV.

Portable and mobile are a big deal and will be big business in most countries. The recent IBC show in Amsterdam was 20% bigger than last year mostly because of the interest in mobile DTV.

In the US we do have two ventures both targeting cell phone DTV, Qualcomm and Crown Castle but soon you will hear of other ventures targeting vehicles, laptops and other larger screens than cell phones.

Auctions to be held in 2008 will allow more such DTV that works mobile and portable. Stay tuned. The disastrous DTV transition in the US has held back progress but it will soon be of little interest as new broadcasters come on line who do care about OTA DTV broadcasting unlike the current broadcasters who live and die by must carry over cable.

It may be a few years before technology allows a cheap portable ATSC
TV, but it will happen. I think it's foolish to think people will
just stop wanting portable TVs because they're digital now. People
like their NTSC portable color TVs even though you can't get a very
good color picture most of the time and the screens are too small to
really enjoy it. It's certain that people won't want NTSC portables
after they stop NTSC broadcasting. Using a battery portable TV with
an AC powered receiver box makes about as much sense as using a
walkman with a rack component CD player.

I would agree....would you want your cell phone to come with a cord
that you had to plug into a stationary socket before using it?

HDTV will not be a replacement for NTSC until it does everything that
NTSC does now...everything.

And the public will not accept it until it does everything that it
replaces.

NTSC will be with us longer than anyone wants to admit.

Just got my FT-530 (switching over from a VX-5R, where I've been
experiencing EXTREMELY bad UHF intermod; hoping the FT-530 will be an
improvement). My problem is that the jumper pad configuration on my
radio doesn't quite match the layout of any of the configurations I've
seen illustrated in any of the online mod instructions. So I'm a
little nervous about unsoldering what appears to be pad 13 given the
possibility this is some very early or late revision of the radio that
the extended tx/rx mod doesn't apply to. My radio's serial # is
3H250297 if anyone can help me ID year/revision by that.
Thanks,
Ethan

I've been on HF for years, but am new to VHF/UHF.

I'm thinking of getting a VHF/UHF base station and it looks like the only thing around is the ICOM IC-910H. Is there a reason for this? Because of this, it seems to me that most people must not have a base station for these bands.

Is this correct?

Rod

Many of the newer HF rigs come with one or more VHF/UHF bands so if a person has one of those, there is no need for a separate base station for VHF/UHF.

For example, I have the TS-2000. In addition to the MF/HF bands, it has 6m, 2m, and 440. So I have all-mode capability for these bands. Plus I can buy a 1.2G
module and add external transverters for other bands.

I'm in the Olympia, WA area. I just took the Extra test, and while I was studying I got interested in the sections on repeaters and satellite. I've worked HF for years, but never done anything else. So, my interest got piqued.

Satellite sounds interesting, but I don't know anything about it. So, I am going to have to do some reading up. I don't even know how to work a repeater, so you really know I've just been into HF.

With the advent of the all mode - all band (nearly) radios like the ICOM 706
and others -- most new buyers find these very attractive for the price of an
all in box. So you get HF, Short Wave, and VHF/UHF for the price of an
older VHF/UHF rig. And many rigs can be used mobile as well as base.

Lots of folks operate VHF/UHF as base rigs -- probably more are using a FM
VHF/UHF mobiles with a power supply at home

There are lots of discontinued (now used) VHF/UHF transceivers such as
Icom IC-275/375/475/575/1275 Series Transceivers
IC-820H VHF/UHF Transceiver
IC-821H VHF/UHF Transceiver
IC-970H VHF/UHF Transceiver
Kenwood TM-255A/TM-455A VHF and UHF Transceivers
TS-60S VHF Transceiver
TS-711A/TS-811A VHF & UHF Transceivers
TS-790A VHF/UHF Transceiver
Yaesu FT-736 VHF/UHF Transceiver

Lots of folks operate these as a base station even though some are
mobile rigs -- using a 12V power supply

Some all modes are great for Sattellite work.
Most other activity on VHF/UHF SSB or CW is during contests.
Some use VHF rigs for data such as packet radio

And using SSB, data, or CW on VHF/UHF will get you and your buddy a
nearly private QSO

And don't forget the six meter band is VHF -- all mode 6M rigs can
work repeaters, SSB, Data, and CW.
During high SFI propagation and sporadic E, one can work lots of DX --
worked all states and DXCC on 6M is possible with a modest antenna

--
CL -- I doubt, therefore I might be !

I'd like to believe that, but I'm afraid that the FCC has other ideas.

I know I won't be buying an HDTV receiver any time soon, they're still WAY out of my budget. I can buy a 27" NTSC set that looks just fine for what's being broadcast for $175, it's 10x to 12x that for the cheapest HDTV ready (without the HDTV tuner) set. Damn if I'll pay more than a week's wages for a TV set, there's just nothing worth that kind of scratch to WATCH on them.

Using an Icom 746 Pro here which includes HF/6M/2M with a full 100W on all bands. I have been on HF since 1995 and an avid DX'r and secretly sneered at VHF/UHF but did want to try 2M SSB.

I now have VHF antennas at 72' 90' and 95' and am net control and founder of the Deep South 2 Meter SSB Net.
There was very little 2M SSB traffic in my region when I got on 2M SSB but since the net started on April 8, 2005 we have now had over 100 2M SSB stations check-in representing 10 states so far.

Typically there are 25-35 or more O(record is 39) check-ins every evening. So..for those that say there is little 2M SSB activity why not stir some up???!!!???

Deep South 2 Meter SSB Net - 8:30PM CT - 144.240 USB - net control EM52kn (Union,Mississippi)

Will not happen! Over the next few years the standard for
portable/mobile will be set by broadcasters like Qualcomm, Crown Castle
and others all of which will be using COFDM based modulations that will
be extremely robust.

Anyone trying to use a junk modulation like 8-VSB would be crazy and
whatever product they tried to sell would be laughed off the market.

This is what COFDM can do in a market like New York City. 8-VSB still
does not work in New York even for fixed receivers on rooftops with
fancy powered and rotored antennas let alone mobile with half inch
antennas like Qualcomm and Crown Castle will offer.

www.viacel.com/bob.wmv

Japan will start a mobile COFDM cell phone service in a few months. The antenna is an inch at best.

5319. Sale Drakes tr4c's with accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-30 04:08:58 UTC
From: guy quartarone <guyq@comcast.net>
Message-ID: <vJadnRhmaqvG2vneRVn-3w@comcast.com>
Source record: 12692

I have two Drake tr4c for sale The first is with factory installed noise blanker and manual
with full output over 180 watts on lower bands and slightly less on 10 and 15 the receiver works great. The radio is completely original and mint and has been calibrated and aligned by a drake techician. I have some nice pictures to send out if interested asking 450.00 for this one.
The second tr4c is in very good condition with manual. Full output, great receiver,nomanual, very clean chasis but a few minor marks on the case and faceplate. Send for pictures 350.00. Radio has been aligned and calibrated by drake technician.
I have available drake ac 4 power supplys for both. They are for sale at 100.00 a piece but will only be sold with the drake tr4 c. no exceptions. The power supplys have been rebuilt with new caps as required and work as they should.
Thanks for the space Guy wa1tqq 781 438 1765

Good point. And the MOST tragic part of it is that after they took the
bandwidth, they decided not to use it.

>
> Is this correct?

Very dependent on what mode(s) you want to operate, and how you
define 'base station.'

Examples: If it's just working the local VHF or UHF repeaters from
home, many hams will simply use a mobile radio and 12V power supply.
Others go the route of converting retired commercial gear to amateur
use.

If you're looking for modes other than FM, such as SSB, many of
the modern HF rigs are capable of such operation. My own Icom 706 can
operate all-modes on both 2m and 440 (though it's mounted in my van, so
I can't really call it a 'base station').

Happy hunting.

Of course, UPS only asked for the bandwidth. It was the FCC
and congress that gave them what they asked for. What UPS wanted
to do was perfectly valid, and a good idea too. If there is any
blame to pass out, it rightfully belongs to the FCC and congress.

Is there anyone who hasn't ultimately benefited from the ability
to track their packages? UPS forged the way, but all shippers
now provide the capability. It just happened that the existing
cell phone infrastructure was a more practical way of providing the
tracking service than was building an entirely new infrastructure
on 220MHz... something that, in hindsight, the FCC should have
realized.

The FCC is Reactive not Proactive. The latter would require thought.

Rod,

I suspect 144MHz narrowmode activity in your area is rather low (chicken and egg situation). On the other hand, you can make people happy with WA for WAS.. Possibilities: Use sats, Meteorscatter and/or EME. With an IC910 (possibly with an additional preamp) and a 3wl yagi you can do all of those modes. If you want to improve over the IC910 your alternative is a transverter behind a (good) HF rig. See DownEastMicrowave or DB6NT (re latter: Take a breath before looking at prices). An Elecraft with 2m transverter also comes highly recommended by many people. In addition that makes a great HF radio. Yagi's can be had from several sources, good ones are M2 or others (commercial) or DK7ZB (easy homebrew and cheap with great performance).

For MS and EME check the page from Joe K1JT for the WSJT computerprogram. Also check the Pingjockey page, the JT65 EME page, bigskyspaces.com, etc. The bigger the station, the better your results will be. 100W + 3wl allows tropo range of abt 250-300mile range at all times. 4 x 5wl + 1kW will make that abt 500-600miles. Meteorscatter will have a range of 500-1300 miles. More power will make QSOing easier but not influence the distance much. Theoretical limit is abt 1500 miles which is very rare. EME means around the world. 100W + 3wl means you can work abt 5-10 stations with patience. 1kW + 4 x 5wl allows you to work almost all active EME stations and work DXCC on 2m. For more EME info look at the homepage of PA0JMV.

It is interesting to see many HF folks becoming interested in VHF work. It is very different, mainly because the relatively low activity. If you put your mind (and equipment) to it, it can be very rewarding. I am an average station in Europe of abt 3-4kW ERP and have worked abt 70 DXCC without much effort including W,VE,KG6,ZS,JA. Just don't expect it to be easy, it is a definite challenge!

GL! Hope to work you one day :)

for Satelites (which is a subset of VHF UHF) only the IC 910, the FT
847 and the Kenwood something like Ts-2000 are worth considering I
like 847 but with New sat coming making using of 1.2GHz I would not
buy one today for satelites work (i grabbed a chance to get the Boss
to buy me 910H with 1.2GHZ to settle some disputed billing between him
and I so I have both the 847 and 910)

Kenwood has a rep for nice gear but I have found there stuff "doesn't
play well others" that is it harder to find/interface no Kenwood
accesories so i tend to avoid them

HDTVs are actually a LOT cheaper than that now. You can get a 27ish
Sanyo set with a built in ATSC tuner for about $450 now. Not top
quality, but unless Sanyo is farming out manufacturing to Durabrand it
should be decent.

Also true. However, I have many more unkind things to say about the
spectrum management folks at the FCC. And the enforcement guys all
seem to be doing nothing other than busting FM pirates and breast-showing
broadcasters, while badly-maintained cable TV networks across the country
spew trash all over the VHF bands and touch lamps that blatantly violate
Part 15 are available at every Wal-Mart.

Being easier doesn't make it more effective. Would you boycott
Chevrolet because someone robbed your favorite bank and used a Chevy
as a get-away car?

UPS thought they needed some spectrum, and they asked for it. FCC
didn't see significant usage of the 220 band, and offered it up.
FCC could just as easily have offered up a small chunk of some
microwave band.

All votes are equal in value, but not all voters. Some just
vote what the newspapers, and the parties say they should, others
write letters, make phone calls, create blogs, ... They get more
political power than the usual voter. If you want to get the spectrum
back, start lobbying for it. Come up with a reason why hams should
have it back... We probably won't get it back, on account of ham
radio being among the "walking-dead". (and yes, I am a ham, so I
get to make observations like that.)

They don't violate part 15! They are perfectly in complience. The violation comes when the user doesn't prevent his device from interferring with any service. It was idiotic of the Congress, and the FCC to allow that wording, but they did...and we didn't hold them to task for it.

Sure don't have anything like that available at our PX or through AAFES
Online. Cheapest digital ready TV we have access to is $1000, 24" screen,
and has no digital tuner even available for it yet.

Not a widescreen, but not a bad deal for an entry level set.
No where near $1750-2100 either! Check your facts first.

Yes, it is HD. If you are watching an HD broadcast, there will be bars on the top and
bottom. It cuts down the size of the viewable screen, but it is HD.
The effective screen size would be 29.4" instead of the actual size of 32".

The screen aspect ratio has nothing to do with whether a tv is HDTV or not.

If the tv can display the lines of resolution at the appropriate scan rate for HDTV, then it is high definition. Just because it may have bars on the top and bottom, or on the side when displaying a different aspect ratio has nothing to do with HDTV or not.

I guess if it shows the correct resolution but why anyone would want to
buy something that bass-ackward, I don't know. May as well just buy a
smaller TV with the correct aspect ratio.

True, and this is likely a piece of junk tv, but the poster I was responding to said that you couldn't get even an HD monitor for less than $1750.

"They"? UPS never applied for any 220 MHz license nor do they
operate on 220 MHz, then or now.

The culprit was a certain "also-ran" equipment manufacturer who had
a bright idea (and whose CEO had "juice" with the FCC from whence he
came) but never could produce equipment that worked on that band.
They approached UPS to get them interested, but UPS got tired of
waiting for working equipment and looked elsewhere (800 MHz).

Gotta keep the urban legends straight!! <ggg>

What is the 'correct' aspect ratio then?
Most people for the next 3 or 4 years are going to have 95% or more
stuff available over cable at 4:3 aspect ratio, why would they want to
buy a tv that would have those annoying bars on the sides for 95% of
what they are going to watch for a next few years?

Seems to me that it would be bass-ackwards to buy a tv set that does
not fit most of your available viewing material.

The problem so far in being able to get enough HDTV sets and ATSC
tuners available has been the widespread penetration of cable. To use
the still standard cable, you need a standard tv set. Cable companies
have been slow to provide HDTV capable signal at reasonable cost.

I believe the sets he's referring to are called EDTV, they support 480p
which is an improvement over the 480i of NTSC, but nowhere near as nice
as 720p on a HD set.

5347. Kenwood TS-940S/AT

Newsgroup: rec.radio.amateur.equipment
Date: 2005-10-31 03:22:13 UTC
From: KI4JKU <hcmoodyjr@earthlink.net>
Message-ID: <1130728933.403843.104840@g49g2000cwa.googlegroups.com>
Source record: 12520

Gentlemen,
I recently purchased a Kenwood TS-940S/AT (serial number over 20 mil) - I know that the user manual states 100 % duty cycle at 100 % power - but they do put a caveat in there - something like if transmit times are going to exceed 1 hour the power output should be reduced. This leads me to my question - for one is the stated duty cycle really 100 % as stated above? Do any of the users on this group run RTTY with a TS-940 and if so do you "baby it" or do you turn the power up to 100 watts or greater and run it that way regularly? Have you experienced any problems in doing so? Have you done anything "special" to run it for long durations (for example 100 watts RTTY for contesting all weekend long) ((When I say special like this I mean for example - extra fan on heat sinks - power supply modifications, PA unit modifications, etc).
Any information is appreciated - I've really been babying this rig ever since I got it because I get the impression that the guy who owned it before me did also - its really a beauty (inside and out) and it was (and is) very well taken care of...
Thanks,
KI4JKU - Clyde Moody

Hmmm....I probably have a notice here somewhere with your autograph :)

Does the FCC still go after Novices with 40m harmonics falling out of band on 10 meters or has the freeband CB QRM covered up all of the violations?

Just kidding. Well, no...not really.

How nice you can go to Wal-Mart. I can choose from either the BX/PX or
hundreds of stores on the local economy. The BX/PX are by far the cheaper,
and no such sets exist in their local inventory, nor on their website.

The Icom 208H does not receive in the 42MHz range, per their specs:

Wideband receiver
See why Icom has a world renowned reputation for superb wideband receivers with the IC-208H. The IC-208H wideband receiver covers 118–173, 230–549 and 810–999MHz* as standard. Listen to your Amateur VHF/UHF bands, as well as aviation, marine, weather and other utility communications in a compact mobile package. Extends your mobile radio enjoyment!
* Excluding Cellular range.

You are correct. It doesn't appear to cover the 42MHz spectrum you would like. The only radio I can easily find that comes close is the Yaesu FT-8900R. I don't know if the extended TX mod will extend its Rx range in the low spectrum to cover 42MHz or not. You're probably going to have a difficult time finding a reasonably priced Dual band rig that will do this. 42MHz generally is too close to the radio's own IF spectrum.

You may end up doing as I do and just rely on monitoring the CHP extender channel only (154.905MHz in most areas of California.) Despite being only 1 watt Tx from the cars and usually only on when a car is stopped, you may find surprisingly good reception on this. Sure works better than nothing.

As a last resort, you can wait an unknown amount of additional years until CHP finally gets the budget and the FCC approval to move the entire system to 700 MHz.

I have an Icom IC-746 (original, not pro.) I need a DTMF microphone for it. I have an Icom HM-118TN for my IC-706 MKII g, but it has a modular connector. If I buy a modular to 8-pin adapter, will the 118T work satisfactorily with the IC-746? Correct gain, impedance, etc.?

I actually prefer 4:3 HDTVs for now since most of what I watch is
still 4:3. Also, a 32" 4:3 set is about the same price as a 30" 16:9
set and will give you the same size 16:9 picture. Plus, you get a
bigger 4:3 picture for free if you don't mind a set that takes up a
little more space.

The only radios I can think of that are reasonably compact, and will
do what the OP wants are the all-band mobiles like the Icom IC-706
MKIIg. Of course they are a little larger (but can be remoted) and
cost more than a dual-band VHF/UHF rig. It's a lot of extra machinery
and expense though, just to pick up receive on 42Mhz. Could always
use an HT with wide-band receiver, like the Kenwood TH-F6A and others.

I need something similar to the Icom OPC-589, except opposite gender.
I want something to be able to use an 8-pin modular plug microphone on
a radio that has an 8-pin round jack. I.E. the modular end needs to
be a female jack, and the radio end needs to be a standard 8-pin mike
plug. I guess I could make one, but the only modular jacks I have
seen are Cat5 jacks for networking, and they are meant for
installation in a wall plate or similar. Not really suited for an
in-line cable.

Source record: 12544

HamPoll is here in order to give amateurs a chance to speak for themselves, and in time to provide reasonably accurate and significant polling data on a variety of issues related to the amateur radio service.

You are welcome to browse the polling data we have, but we especially encourage US amateurs visiting here to register with thier callsign and vote in the HamPoll Polling Station.

Whether you come to browse, to discuss or submit new polls, or to tender your vote, be sure to visit regularly as new polls are included from time to time, and the poll data changes as more hams participate day to day.

Stop by at: http://www.hampoll.com

Note that for the RJ45 female, this looks like nothing more than an RJ45 male with a double female adapter.
CAUTION !! There are at lease TWO types of RJ 45 F-F adapters - "Straight through" and "reverse". With proper wiring either can be used.
The "straight through" actually reverses the connections when traced directly from in to out - it is (two negatives make a positive sort of thing).

5381. Re: Computer Control of Icom M700Pro

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-03 21:00:15 UTC
From: Steve Nosko <suteuve.nosukowicuz@moutouroula.com>
Message-ID: <dkdtovdko1@engnntp2.cig.mot.com>
Source record: 12454

I know nothing of the M700Pro...but...If you haven't tried, Icom has a standard control protocol used on virtually all its (ham) radios.

Have you dome Google on the model?

OOPS... After writing all this I did a Google search on M700Pro computer control

http://www.sailmail.com/icom_com_port_control.htm

This was the first one of many...

It is described on the mods.dk web site along with the level converters. I wrote my own Excel spreadsheed macros using VBA. I control my Icom 706 MKIIG, my TS-2000, TH-F6A handheld and a speach synthesis module with it.

I posted versions on most of the 706 Yahoo group's Files areas.

73, Steve,

If U want, I can send one, but please use my Yahoo address (don't read here often)
noskosteve@ Yahoo?>com

5382. Re: Anyone Make a 8-pin Mike Plug to 8-pin Modular Jack?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-03 22:11:09 UTC
From: Dick <LeadWinger>
Message-ID: <kf2lm1tb1j4qrlmiglflbfsemsrli88gc8@4ax.com>
Source record: 12455

Thanks Steve. I made an adapter today using Radio Shack RJ45
connectors and 8-pin mike plug with a short piece of CAT5 cable. I
used an RJ45 coupler (Home Depot) to hook the two RJ45's together.
Works like a champ. Now my Icom HM-118 DTMF mike works with my Icom
IC-746 when I need a PL tone on the repeater.

5383. TS-450S Problems

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-04 19:12:31 UTC
From: Paul_Morphy <paul_morphy2xx@coolgoose.com>
Message-ID: <zoOaf.37356$zb5.21795@bgtnsc04-news.ops.worldnet.att.net>
Source record: 12456

Anyone encountered this: When placed into transmit mode by any means, radio will not drop back into receive mode. Doesn't emit power unless key is closed etc, but VOX does not disengage. The only way to get it back to receive is to punch a front-panel button like PROC, RIT, etc. Other problems that may or may not be related are: no display on power meter but unit produces 100 W; RIT doesn't function although light comes on. F.LOCK is not on, the main tuning control changes the displayed frequency. If I tune from 1501 kHz to 1500 kHz the receiver seems to fail. Retuning to a frequency above 1500 kHz does not return reception; I have to punch one of the above-mentioned buttons to get it back. There are no optional filters or other accessories installed. When I can get it into receive mode there is plenty of noise to indicate the receiver is working, but doing anything to activate the VOX kills the receive. VOX DELAY, ANTIVOX and VOX GAIN at full CCW, problem occurs with or without headphones plugged in, and whether I key it with the XMT/RCV button or via a key, or the PTT button on a mic.

This was an eBay purchase, supposedly working 100%. Nothing rattling, it was double-boxed and the outer box doesn't show signs of rough handling. It's probably going back to the seller but if anyone has a simple suggestion I'd appreciate it. After the problem is resolved somehow I will discuss the name of the dealer from whom I bought the radio.

They do make a "Government, special agency" model for those who need it,
but one must provide proof of legal requirement to purchase it.

Not all 7000's are created equal. All of the early models were totally
open, and topped out at 2Ghz. Later versions were blocked in specific
800-900 Mhz ranges, due to US Regulations, and this was done via
Firmware PROM Code changes, so they couldn't be opened easily.

Me who has an early version......

That was the R-7100. The R-7000 was discontinued long before the
date that the cellular bands had to be blocked.

There were various versions of the R-7000 for different markets that
may have had frequencies blocked. The U.S. versions did not.

Geoff.

Jim-

There seems to be no rhyme or reason for your symptoms. Try resetting the CPU. Per 4-12-2 on page 54 of the owner's manual, you hold down the A=B key when turning on the power, and everything including memory is reset to factory defaults. Holding down the A/B key instead will save your channel memory contents.

Have you gone through the troubleshooting guide in the owner's manual? You should be able to determine whether or not your troubles are just a combination of mis-adjustments.

If you need manuals, go to http://www.mods.dk. Click on Kenwood on the left side of the screen. When that comes up, click on Manuals at the top of the right-hand list. Scroll down quite a ways for TS 450 690.

Radio Specialty Model 1179-22-1 Repeater----------------$ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed, but inside is very clean!
Repeater is in a wall mountable battleship gray cabinet,
that is 4" deep by 13.5" wide, by 21.5" tall, and is
around 30# in weight. It is a VHF base/repeater used by
the BLM out west...
It also has on the front cover, I-5YACC, then under it is
271, under that VHF REPEATER. There are a lot of FCC type
acceptance # all over inside, plus the maker, and maker's
partial address, and part # for transmitter, and receiver
sections.
NO documentation.

2 Kenwood TR-7950-----------------------------------EACH-$ 80
Each comes with mobile mount, and 1st sale gets the
packet adapter. Are in very good shape, but do not include
the TU-79 PL boards which are available at www.piexx.com
They will not come in original box, and if I do not have
the manual, I will photocopy, or pdf one (your choice)...

Standard C468A LNIB-------------------------------------$ 75

LinkXcel PS-141B 4 port KVM Switch with 4 cables---------$ 65
-Like New- This is the PS2/VGA model -No manual-

Pioneer DRM-602X Scsii cd changer that uses Pioneer------$ 15
audio cd carts.

All items will include manuals unless noted.
Shipping is NOT included on any item(s).

Pictures of some radios can be found at www.mantico.com/4sale.htm
I will have all items on line as soon as posssible.

$ 550.00 total (plus shipping costs) or best offer for both items

The FT-902DM is a precision engineered,high performance HF transceiver. Covering the bands of 160,75,40,30,20,17,15.12 and 10 meters. SSB (Upper and lowers sidebands. AM,FM,CW,& FSK.
180 watts input on SSB/CW and 80 watts on AM,FM & FSK.

Advanced features include:

PLL

Built-in Curtis 8044 IC Electronic keyer

Frequency memory circuit

Dual - Filter varible IF bandpass tuning

CW audio peak frequency (APF) tuning

VOX - Semi- breakin - with sidetone in CW

25kc calibrator - advanced noise breaker - RF Speech

Processor - and includes a 20 DB RF attenuator

Unit operates on its own built-in 110/220 volt power supply or on 12 DC. AC cord included.

Note: The S/RF meter backlight needs replaceing. Everything else works great.

The orginal Yaesu hand microphone and orginal FT-902DM instruction manual is also included.

The Yaesu FV-901DM scanning external VFO works great also.

The VFO has up to 40 memory settings. Plus VFO tuning.

If you need more info about the FT-902DM or the FV-901DM scanning external VFO - Please e-mail me and i can e-mail you more info. Email me for photo's if needed

My 7000 and my 7100 receive this band, but I'm outside USA so there may be some versionitis going on. That all said, unless US still sues analog cell phone it's not much use. The top frequency was 2GHz, not 20GHz (if the OP actually meant 20).

Cheers.

Radio Specialty Model 1179-22-1 Repeater----------------$ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed, but inside is very clean!
Repeater is in a wall mountable battleship gray cabinet,
that is 4" deep by 13.5" wide, by 21.5" tall, and is
around 30# in weight. It is a VHF base/repeater used by
the BLM out west...
It also has on the front cover, I-5YACC, then under it is
271, under that VHF REPEATER. There are a lot of FCC type
acceptance # all over inside, plus the maker, and maker's
partial address, and part # for transmitter, and receiver
sections.
NO documentation.

2 Kenwood TR-7950-----------------------------------EACH-$ 80
Each comes with mobile mount, and 1st sale gets the
packet adapter. Are in very good shape, but do not include
the TU-79 PL boards which are available at www.piexx.com
They will not come in original box, and if I do not have
the manual, I will photocopy, or pdf one (your choice)...

Standard C468A LNIB-------------------------------------$ 75

LinkXcel PS-141B 4 port KVM Switch with 4 cables---------$ 65
-Like New- This is the PS2/VGA model -No manual-

Pioneer DRM-602X Scsii cd changer that uses Pioneer------$ 15
audio cd carts.

2 IBM Thinkpad 350 laptops--------------------------EACH-$ 25
128M HD, 16M ram (max), Paper White LCD, loaded with
Dos 6.22 and WIN 3.11 .
Both need new batteries (MAIN/CMOS), the cases are scuffed,
and shows age. One has slight blemish on LCD...
Would be great for packet and programing older radios...
No manuals

All items will include manuals unless noted.
Shipping is NOT included on any item(s).

Pictures of some radios can be found at www.mantico.com/4sale.htm
I will have all items on line as soon as possible.

5410. Repair for Kenwood R-2000...

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-06 22:33:48 UTC
From: SWping <bgsmallwood@cox.net>
Message-ID: <n51tm1hoo6q10jbrr2cbc4n133plphfhn5@4ax.com>
Source record: 12483

I have a Kenwood R-2000 receiver that has developed tuning a problem. When tuning slowly it often bounces back and forth between 2 adjacent frequencies (14.295 and 14.290 for example) and the only way I can go past those frequencies it to tune quickly. Also it sometimes tunes to higher frequencies even when I turn the knob CCW.

If I remove the power cord for a few minutes it tunes normally for about 3-5 minutes but then starts doing the same thing again.

What I am looking for is someone to recommend a good service center that I can contact about repairing this receiver. I have the original owners manual and the service manual. I have had it a long time and am fond of it.

Thanks

bgsmallwood@cox.net

5411. Spread Spectrum anyone?

Newsgroup: rec.radio.amateur.equipment

From: Jozef <jozef@metaphoria.org>
Message-ID: <1131398705.36938@r2d2.vermontel.net>
Source record: 12493

Perhaps some old timers owned an IC701 (HF rig) and are familiar with this radio. I am trying to identify the adjustment that determines the automatic TX and RX offset in CW mode only. Typically, this should be around 600 Hz or so, but age has moved the automatic offset in CW mode to point where the RIT needs to be turned on and swung all the way over clockwise, almost to the end. This should be a relatively minor adjustment. That said, I'm uncertain as to which control it is. Is there anyone who knows this radio who can help? 28 years of fine service for the IC701, to be replaced with an IC756 Pro III in the next few months. I hope. In the meantime....

I'll assume English isn't your first language as your sentences don't always make sense, but I'll try to answer your original questions:

>What is the necessary power supply for this unit?

What does the manual say? If you can't post a link, can you type out the page with the spec's?

>Is the power requirement met by a standard ac inverter at 300ma or 600 ma?

See above.

>Or is the power requirement proprietary?

What do you mean by that? It's for an auto situation so it'll be 13.8VDC at some current rating which we'll know when you post the page.

>does wal carry the inverter and is that a reliable combination?

They're bound to have a suitable plug-pack. It'll be as reliable as WalMart stuff is.

>what's the story on the 21' ant.? is this a 21' typo?

Probably, but can you post the page?

>or is the satellite in the wrong orbit?

I can guarantee that it isn't, nor would that affect antenna size in a meaningful way.

>i asked in other forums without reply.

Because there's too little information. Give us something to work with and we can help.

Cheers.

5423. Add WARC Bands - 12M and 17M to Hustler 4-BTV, 5-BTV, or 6-BTV

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-08 04:22:27 UTC
From: Charlie <charlie@play.com>
Message-ID: <11n0a0lhlf0vh02@news.supernews.com>
Source record: 12496
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

Takes about 1 hour assembly time and costs less then $15. Takes legal limit and requires no permanent modifications to original Hustler BTV antennas. SWR on 12M and 17M < 1.2:1 This mod adds a 12M and a 17M vertical radiator on each side of the existing Hustler antenna. Minor retuning of original bands required after 12M and 17M are tuned. It's EASY!

This works a treat and is a great way to get an extra 2 bands from an existing antenna structure.

I've heard a lot of good things about the TS-850, and got to use one at Field Day the last few years. So I'm thinking about buying one, but want to avoid any "duds" if they are identifiable.

I've noticed a few ads telling about selling the 850 for parts because they bought one used "as is" that didn't really work as advertised. There have been references to serial numbers, like the 60K mark due to a modification capability, but I'm not too concerned about that particular mod. Your thoughts?

One of Kenwood's great rigs IMHO. Had one for many years with no troubles.
For RTTYor contesting, it would run keydown for long periods -- big heavy
duty heatsink.
CW filters are quite good
The dynamic range was superb, better than my latest TS-870S.

RE Duds -- When I buy used gear, I ask the seller for a guarantee that the
rig is fully operational in all modes and bands.
Then I test it with my HP equipment for power output, sensitivity, etc.

You can read about Common Problems with the 850 and Possible Cures AT URL:
http://n6tr.jzap.com/850repair.html

Hello Paul.
I suggest that you verify the condition of the "Back-up
Battery", which is located within the front panel/face plate of the
radio.

I suspect that if the battery leaks onto the surrounding circuit areas,
a huge amount
of proverbial "hate & discontent" could take place with regards to
proper operation of the "450S" radio.

One internet page I DO know of which presents satisfactory images &
instructions for inspecting & removal/replacement of the back-up
battery is located at the following URL:

http://www.geocities.com/lfnca/450bat/450sat_battery.htm

Additionally, there are several Yahoo Groups available which offer
multitudes of solutions re: issues related to Kenwood Amateur Radio
products. One related directly to the "450" {in addition to the "850" &
"690"} can be found at:

http://groups.yahoo.com/group/TS-850_450_690/

You'll find many fine people within the "850/450/690" group who would
probably come through with some additional suggestions/solutions.

Good luck, 73

Hi all, just got in some 403-470MHz Motorola Visars [16ch/4w] from a school board, used inside. Great shape,
tested/working. Excellent condition.

10 radios/short antennas [one long antenna]
10 newer small 'clamshell' dual rapid smart-chargers.
14 slim batteries, datecodes around 03/04, most working.
4 belt clips/holsters.

Will have programmed to your specs.

$130 each for radio and dual rapid charger, $1,250 for all.

I'll be out of town at a conference, back next week.
Pix available then if needed.

Thanks!
rb

5435. Yaesu FT-50RD Transmit Problem

Have you checked the battery voltage? Could
be low or going bad. Mine would give a beep
and go blank, then come back to receive when
the battery was low. Do you have a power supply
to run it on as a test?

I'd look for a dual bander that has general coverage receive for the
484 stuff -- and a separate Motorola or whatever rig for 42 MHZ; you
can find them cheap on eBay or rec.radio.amateur.swap -- I saw a low
band Motorola Maxtrak rig cheap somewhere in that neighborhood a few
days ago.

Otherwise, there's no much ham stuff I know of for 42 Mhz.

From: west <westley@tampabay.rr.com>
Message-ID: <y%Acf.345$FW4.113@tornado.tampabay.rr.com>
Source record: 12415

I need to buy or build a bench power supply to test & design various tube equipment (audio & ham). I would like it to be something like a Heathkit HP-23 with voltage & current meters. The major problem with the supplies I've come across such as the HP-23, is that the B+ current is appx. 100ma. The bias & filament supplies are OK, but at times I need around 400ma for the B+ out. Is there such a PS available, perhaps with tube regulation & rectification or do I need to build from scratch? Any answers will be most appreciated.

Cordially,
west

Message-ID: <cK4df.2351$ih5.720@dukeread11>
Source record: 12418

Free tower, rotator, and antenna in Pampa, Texas. The tower is a heavy duty, windmill type self supporting tower with a large base that tapers off to a small top section. There are 4 sections. It is around 40 feet tall. I believe that the antenna is a Mosley CL-33 triband beam, and the rotator is a Ham IV. There is also a 2 meter antenna on the very top, above the beam. and some extras like an antenna tuner and swr mete. I am posting this for an estate of a fellow ham. The tower and antennas will have to be taken down, which will require some effort and skill. If interested, e-mail me for more info. Thanks, Charlie Hugg, K5MBX

5449. Narrow Filters - Ringing ?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-12 13:01:31 UTC
From: Froggythefrog <froggythefrog@hotmail.com>
Message-ID: <4375e7b8$0$29190$8fcfb975@news.wanadoo.fr>
Source record: 12422

Just a quick question.

When on CW mode using narrow filters, 500/250 I get this ringing all the time, I'm guessing this is caused by the background noise on the bands coming in via the narrow filters.

I operate mainly on 160/80/40/30m CW thus I am wondering if it is possible to do something to the rig to get rid of the ringing effect ?

The rig I use for CW is a Tentec Omni VI with the roofing filter modifications.

I also have an FT1000MP which suffers exactly the same problem, however I don't like using it on CW as it has terrible key click problems, as per all the Yaesu range of radios.

So, is this problem cureable or is there a radio on the market now that doesn't suffer from this problem ?

Thanks for any help.

I recently had the opportunity to hear both a 250Hz (from memory) stock FT-1000 filter and a homebrew same bandwidth filter whose group delay response had been optimized- the difference was very obvious. I am not aware of any amateur filter manufacturers that at least claim to be paying attention to this parameter. See W7ZOI's text Experimental Methods in RF Design for a treatment.

FS: VHF Repeater Antenna
DB224-E
Omni, Exposed Dipole
Great Repeater Antenna
Its about a Year old.
To read info go to this site:
http://www.andrew.com/products/antennas/bsa/DB224-E.aspx
At the Time I wanted a repeater antenna, I asked in the newsgroups
what is the best
antenna for repeater use. I got many replies to buy this antenna.
And it is a GREAT antenna. Not rusty at all. GREAT SHAPE!!!
I works and looks 100 PERCENT!!
Must be picked up in Essex County NJ
Its like new!
Price: 260.00 If you see it, You'll buy it.
ritchi50@optonline.net

`
Beg your pardon!!! ICOM did'nt make a 571 they made a 751 one of the
greatest rigs of its time and still in use here. A guy in Italy
Named Roberto Bernardi also made a ramboard for it that just plugs
in to replace the old ramboard. If your battery went dead on the
original IC751, you lost the whole system thats programmed into the
rig. Could'nt even set a freqcy. I got the ramboard from the guy
in Italy and if its battery goes dead no big problem as you can still
control the rig and set fqcys manually. All you would loose would be
the 31 programmable memory slots.

Source record: 12437

Hi all,
I just got a new to me FT-5200, and have a PL problem... The radio was modified for out of band, and I don't think there are any other modifications. Oh UHF, the PL is one off. In other words, for 114.8, I need to go one tone down for the local repeater to receive me.. I seem to remember this in the past but don't know the cure. I reset the radio and it's limits again but still no luck.. Just wondering (I just need weather receive) if I shoudl reset the UHF back to 440 and 450Mhz acordanily. Anyone have any ideas on this? Hey Charlie,
I have a few of them. One in my truck has about 200,000 miles on it,
from a few Ford Explorers...
It seems to tune well. My antenas are typically bug catchers but also
have one in my Chrysler LXI minivan. A great little tuner. I would
also look at the MFJ, but I have not personally seen or tried it.

If your rotor is the Allinance U-100 model, you can download the manual from
http://bama.edebris.com/manuals/alliance/u100
It includes a schematic

I can't speak to the AT-1000, but I have an AT-100 and I LOVE it! It simply remembers any frequency I "visit" and when I return to that band/frequency, it is there, and I mean right NOW! I am not a fan of "tuners", however due to the civilian and military frequencies I am authorized, I simply couldn't put up enough antennas to cover it all. So, using my inverted Vee and and Antron 99 (to take advantage of polarization of others on the higher frequencies), I can do all I need to do. I *may* not be the loudest fella on, but I DO get good reports, AND good reviews from other LDG owners.

Hope this helps.

.... i have an AT-100 too. it's absolutely wonderful! i used for a
time a 25 feet aluminum pipe lee than one inch in diameter, and a few
radials, God only knows what size. that setup brought in for me
everything from Argentina west, to Korea east. I think the '1000 is a
definite improvement, albeit a little expensive for me.
I didn't even think to look at other ones. Besides, Dwaine's
service is flawlees! A most important parameter, even more so with the
difficulties with getting service here in 4Zulu land.

Hi Charlie,
I have owned mine since 2003. I have used it with
an AL-811 on an 80m loop
and an 160-10m "Cobra Ulyra-lite" antenna. It worked very good on the
loop,BUT I had some
matching problems at 160m. I finally got it all working by adjusting
the feedline lenths on that
antenna. The ant. comes with 100ft. of ladderline,which I then
connected to the Radioworks
"remote Balun"/ 4 to 1,and the to 20ft. of rg-213. It wouldn't tune
there! On 160m, at about
1930mhz, it just quit! I had to change the LENTH OF THE COAX to 50ft.
! ! I don't know
why,but it works!! The TUNER.....well, I have to say that it
makes a lot of noise,BUT
It works great,and i would buy it again!!!

Good "radioing" my fellow ham,

RayN KB1-GHH

Laying out at 16 element "Sterba" into Europe...

1.- Should I float the 450 line into some 2 inch PVC
through the wall then mid-air it 5 feet to the tuner....??

2.- Or should I mount the 4:1 balun on the outside then bring co-ax through
the wall ...then 5 feet top the tuner....

3.-..Or...??

Well, we keep trying. Maybe we will get lucky. Looking for a
Motorola Micor 100 watt PA, Model TLD-1692 for 2 meters in good to
excellent condition. Name price. Thanks.

PS: If you could pass this along to other equipment groups it would
be most appreciated. Not too familiar with what is out there.

73, Murray, K3BEQ

Hello All,
I picked up a really nice working Swan 350 at a hamfest this past weekend. I bought it for nostalgic reasons as it was the kind of rig my dad bought for me in 1965. I need info on how to fix the infamous "Swan drift problem". Anyone have any websites I can go to get mods for this rig including the drift fix?
Any help will be appreciated!

I agree. I shipped a 25 pound package to Rome Italy via USPS and the cost was only $42.00. I was told that it would go air and be delivered within 5 days. Had confirmation from recipient in Rome in 4 days!

TBD. Use reply to email.

5496. Cubic 102BXA HF Transceiver for sale/trade - Excellent

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-16 03:59:16 UTC
From: Manytrails@sbcglobal.net
Message-ID: <1132113556.320613.47300@f14g2000cwb.googlegroups.com>
Source record: 12319

I have a near mint Cubic 102BXA HF transceiver and matching speaker/power supply that I would trade for a like condition R-5000 Kenwood shortwave receiver. The Cubic works perfectly, and is in excellent cosmetic and electrical condition. You may read about this fine rig here:

http://www.eham.net/reviews/detail/798

This transceiver was built to military standards, as Cubic provided the

U.S. Military with a lot of equipment during this period. The build quality is excellent, and reliability is very good. A unique basspand tuning system makes this rig a great performer on both SSB and CW. Take

a look at the actual radio here:

www.members.aol.com/mgaluvr/cubic102bxa

This unit comes boxed in two cartons, one for the transceiver and the other for the power supply/speaker, with heavy protective foam, original instruction manual, and power cord. Microphone is not included, but will work with practically any standard type high impedence mike. Guaranteed not to be DOA...this transceiver is fully operational and very nice. Take a look at the photo....additional info upon request...just email me. The cash selling price is $375 plus shipping, but I would prefer to trade for a Kenwood R-5000. Check out this auction that recently ended on Ebay....it was for a 102BX (mine is the newer BXA version) with a bad digital display and a non working power supply. It went for $270 plus shipping.... The unit I have is fully functional and near mint...well worth my asking price....

http://cgi.ebay.com/Cubic-Astro-102BX-HF-Tranceiver-PSU-6A-Power-Supply_W0QQitemZ5822244851QQcategoryZ4674QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

73...and best regards......Bill

5497. FYI: Icom IC-7000 approved

While you have a nice photo on your eBay ad, you'll likely run into the same issue that I had in selling my collection of "Linking Rings" (the publication of the International Brotherhood of Magicians) that consisted of every issue from 1970 to 2003.

I received no bids, because the kids of today tend to falsely believe that the world was invented back around 2001!

Still, I wish you the best of luck with your auction.

5499. <<WANTED>> Motorola console for car or truck

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-16 13:26:42 UTC
From: WØCBF <w0cbf@yahoo.com>
Message-ID: <1132147602.141885.14370@g49g2000cwa.googlegroups.com>
Source record: 12322

Pardon the repeat question but I still have not had any luck in finding
this item
so I thought I would try it again!

Back in the mid 70's Motorola made a console that would fit between the

driver and passenger seat. It was made of a black plastic and the main
use was to mount a rig on the front causing the face of the rig to face

the top of the car at a slight angle for easy viewing and the rear of
the rig would fit over the seat. It also contained a place for an
internal speaker and a center console area that would open for storage
or could be used for writing if closed.

Does anyone remember these or might know where I could find one???

I tried eBay already and have never seen them listed.

Thanks
Chuck

Good condition, there are a few scratches caused by normal wear and
tear. It works fine (tested this morning) and may even have the CTCSS
decode option installed (but ICBA to look).

Many amateur radio operators have experienced "sync birdies' from TV sets that interfere with ham band reception. I presently have interference from the switching regulators in the older APC uninterruptible power supplies common to many computer installations. I want to buy one of those newfangled HDTV sets however I am concerned with interference that these high tech receivers may generate. I suspect there would be minimal interference from the LCD types but the plasma and projector types may present some problems. Anyone have any experience in this area?

... for as long as NTSC analog TV remains on the air, which is likely
to be a lot less than the useful lifetime of a 7000.

Now, if they can provide a way to download an ATSC decoder and
MPEG-2 decompressor into the 7000's DSP, they might just have a
gimmick which will survive for a while :-}

FS: VHF TX/RX Duplexer 5 Cavities
Looks and works GREAT!!!!
Duplexer Model: 28-37-02A Frequency Band 144-174 MHz
Its now on TX: 145.410 MHz Loss 1.39 Db Attenuation @ TX:91 Db
RX Frequency: 144.810 MHz Loss 1.43 Db Anttenuation @ RX:91 Db
Minimum attenuation between tx and rx freqs: 56.6 Db
Bought new in 2/8/02
I originally bought 4 cavity and added another for great protection.
Its been in my home where my other ham equipment is in shack,always
heat controlled. So you get 5 cavity TX/RX Duplexer at a great price.
Non smoker!!
Reason for selling is I have other interest.
Works and looks 100 PERCENT!!
PRICE:::::::: 500.00 Won't last long!

Bought a FT757GX on eBay. It came with the wrong cable.

The Operators Manual says the Jones connector should have two pins jumpered, with nothing else normally applied there. Then plus 13.8V and ground are applied to the other two pins.

This cable had plus 13.8 going to BOTH supply pins. Ground was connected to both of the pins that were supposed to be jumpered.[1]

I learned this when I disassembled the Jones plug after smoke came out of the rig.

I only have the Owners Manual, not the maintenance manual, so there's no schematic to check.

If anybody has the schematic, what did that cable apply 13.8V across? I haven't opened up the rig yet. Too annoyed.

Don NR7X
[1] Can anybody tell from that info what equipment this cable was supposed to be connected to?

Roger,

Here in the USA, the Federal Communications Commission must grant Type Approval to commercially-made amateur radio gear before it can be sold.

73,

ONLY when it is capable of receiving above 30 MHz must it be approved
for FCC Part 15. The Commerically made amateur transmitters are not
tested and only need meet the technical requirements of FCC Part 97
just like any home built transceiver.

Unversal Radio has a really nice one in the "used" section of their website for $1500, which seems like a lot of money unless you like paying all that for a Collins emblem. I think they usually go in the $500 range on the E-place, which is actually a good deal compared to the prices that new 4x811 amps (Ameritron etc.) sell for.

Tim.

Bzzzzt, Wrong answer, would you like to try again for what is behind
Door No.2?

Your confusing "Type Approval", "Type Acceptance" and Part 15 Spec's.

There is a very LARGE difference between, each of the above, and if you
don't know the difference, then you shouldn't be commenting on it.....

Me one who knows.....

Type Approval is only required for external, commercially manufactured amplifiers capable of operation below 144 Mhz. As others have correctly pointed out, a transceiver only has to meet Part 15 (and the emission standards of [97.317].

These people have the service manuals:
http://www.mauritron.plus.com/html/y.html

I have some manuals for mine at home, don't recall off-hand if I have that one but I'll check and see what is there. I recall circuit diagrams so if no-one else has popped up by this afternoon I'll hunt it down (if I can find it - I've shifted house recently :-(

Cheers.

Thanks Ken. I don't want to pop for the manual unless the damage is failrly limited. Obviously with +13.8 applied to both the high side and ground most components were not stressed. The question is what that jumper inside the Jones plug that got connected to the low side of the supply is connected to inside the rig. The smell of the smoke was characteristic of burnt circuit board, and there was a fair amount of visible smoke.

Well, order a PL-259 or a Repeater Guide or whatever when you order.
Or you could just order it for the same price at HRO with free
shipping over $100. I buy from both companies, but if I am doing mail
order, I go with HRO.

I'm trying to remember, as it's been a long time since I had that rig out of the box, but I recall that there's a reverse-polarity protection diode at the input. The fuse should protect the board, but as normal I guess the circuit board tracks protected it for a while. I'd be guessing that's the starting point.

Cheers.

Ken

From: Amol Desai <gtg680m@mail.gatech.edu>
Message-ID: <dllrf8okg1@news-int.gatech.edu>
Source record: 12363

I'm looking to design and develop a remote controlled motor. The way i want to implement is to have a RF transmitter chip which will recieve digital inputs (pushbuttons) convert it to analog signal and the transmitter will then transmit the signal to RF receiver chip which will then convert it back to digital signal and send it to a PIC microcontroller (16f818, specs: 3V, 4MHz oscilator and 1 Mhz internal clock). The PIC microcontroller will then understand the signal and increase or decrease the speed of the motor accordingly. (Basically the concept is based on a remote control cars which kids play with).

I'm interested in knowing which kind (specs,brand etc) of RF receiver and transmitter chips can i use to work in this project. Obviously being a college student i would like to purchase cheap parts :) Any input will be higly appereciated.

You need to check out the Nuts and Volts magazine and their website.
They have many robotics articles and suppliers of the "H" bridge that
you will need to control the power to the motor. Also suppliers of
various RF transceivers for your remote control. I would look for 900
MHz single frequency transmitter- receivers for simplicity sake, then
decide if on-off keying or FSK is the modulation method you need.

Hello,
My friend has a VX-7R (European version) that he is willing to sell to me for a good price. I live in the US and am aware that the European verison will not initially work on the frequencies I need to work on here in the US. I was wondering if I use the freeband mod for it, will it then be a good radio for me to use here in the US? How is the VX-7R Us verison that has freeband mod different from the European version with freeband?

Thanks.

Heleo Brad,
i think there are no great problems. the EU-version with freeband mod.
has no cellphone blocking ... And maybe the auto repeater shift does not
work?
So it is with other yaesu handies US-Version will have ever ARS in US-shift.
The vx7 is a good radio, buy it ;-)

5558. Add 12M and 17M to Huslter 4 5 or 6 BTV's

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-20 22:51:28 UTC
From: Charlie <charlie@play.com>
Message-ID: <11o1vfs1bssp6fc@news.supernews.com>
Source record: 12381
Cross-posted to: alt.ham-radio.hf,rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment

Total cost about $10. Takes about an hour total time. No permanent modifications to original antenna. Web page includes complete fabrication and assembly instructions. Also included is final test data showing swr at <1.3:1 across all 7 bands of a modified Hustler 5-BTV. Some retuning of 20M is usually needed after 12M and 17M are installed and tuned. Mod consists of a 12M 1/4 wave radiator and a similar 17M 1/4 wave radiator installed along side antenna held with 4 Plexiglas spreaders which are home brewed. Takes legal limit.....looks good...works good too!

Tired of "contesters" jamming up the bands nearly every weekend? Find refuge on 12M and 17M !!!

Because you are not going to find a digital "trucking" scanner. You may
however, find a digital "TRUNKING" scanner.

Hello all,

I like to know if anyone is familiar with the twin vertical antenna with the name Supernova 3,5 - 75 mHz and 1000 Watts pep.

A similar question about the GPM-1500 antenna is 1,8 - 50 mHz and about 150 Watts pep

To reason is what is best for my newly to purchase IC-7000.

Thank you (for those providing any info)

kind regards Sean

Most of them WILL need repair. The FT-90R is a turd of a radio.
With more "bugs" then features, it's a real pain in the ass....
I would think of another dualband mobile than the FT90R...seriously.

World Radio Labs / Galaxy of Council Bluffs, IA (later purchased by HyGain
in Lincoln, NE) existed until the late-1970s.

Since this unit uses ten (10) - 6LB6 sweep tubes it is not a practical
amplifier -- since these TV sweep tubes are no longer produced. Might be a
nice project to convert it to a couple of Russian triodes. I would sell the
tubes for the $$

You can get a Kenwood THF6....covers 2/220/440 xmit.....and all
mode/coverage on rcv...for P25, you would have to use an external decoder...
but that wont get you trunking....There are few if any scanners that cover
P25 trunking right now...
what you want does not exist in one package.

I have used the FT-90 for four years now with zero problems, love this
radio! And its the only dual band mobile radio that will fit in our
Outback. Once you get used to the menu's its pretty easy to use, I
know, menu's, those blasted menu's, but what radio doesnt have menu's
these days! I guess my Heathkit HW-2036 doesnt have menu's, and it
does have a "Digital Readout", heay, maybe I will put that in my
Outback!

Poor amp, runs about a dozen old TV sweep tubes with all the problems that come with them! It was a joke when first built, and hasn't improved with age. You can get a nice Heath SB200, SB220 or SB230 for equal or less money.

Some CBer will likely get this rag and hopefully blow it up first key-down.

But wouldn't making your own block diagram help you to understand the
schematic?

I'd imagine it's a fairly straightforward receiver, with a stage or
two of amplification going into a mixer that, given the vintage, is likely
a MOSFET. Then right into a 10.7MHz Filter. Then you get
amplification/limiter and the detector, unless, again as I'd suspect, it's
double conversion in which case there'd be just a bit of amplification at
10.7MHz and a second mixer dropping the signal to 455KHz where there'd
be a 455KHz ceramic filter and amplification/limiter and the detector.
You can find that second mixer by looking for a 10.245MHz crystal, though
it might be highside injection with an 11.155MHz crystal. The detector
feeds the audio stages.

The filter(s) will help to define the schematic, as will that second
conversion oscillator if there is a second conversion.

The first mixer will get its signal from the PLL synthesizer. There will
be a VCO that feeds that mixer, though there's bound to be a stage or
two of buffer/amplification between the two stages. One of those
stages may even be a multiplier; I can't remember whether the PLL generates
the actual injection frequency or a submultiple. Memory says the actual
signal from the VFO is fed into a mixer, with a crystal oscillator feeding
its other input, which drops the VCO signal to a low enough frequency that
the programmable divider chain can deal with it. I seem to recall the actual
synthesizer may be mostly in a big IC, with the programmable divider and
phase detector and likely reference frequency and its divider chain in one
package. You can find out by tracing from the diode matrix that programs
the actual channels to wherever it goes.

I don't have a clue of the layout of the transmitter. I don't know
whether offset is added to the matrix data to get the VCO to switch
to the needed frequency on transmit (it can't be on the same frequency
as the receiver injection frequency because that is off the channel
by 10.7MHz, and then more for repeater offsets), or if there is a mixer
in the transmitter chain that adds one of a number of crystal oscillator
frequencies to provide the needed offset. I doubt they generated

the transmitter frequency at a very low frequency like 6MHz and multiplied up, as was the case with old crystal controlled 2M rigs. But there might be a doubler or something, running the VCO at half the needed frequency. Once the signal is on the actual 2M signal, then it's just a matter of stages of amplification to get it up to the needed level.

Michael

5592. Tower Specs needed Tri-Ex HDZRN Series

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-23 00:39:14 UTC
From: Al Last <al.last@sbcglobal.net>
Message-ID: <SSOgf.23255$q%.13349@newssvr12.news.prodigy.com>
Source record: 12265

Need site location where to find specs on the old military rotating tower made in the 60s by
Tri-Ex. They are typically 71 ft telescoping 3 section with a ring at the 20 ft point and prop pitch motor and chain at base to turn the tower and a fixed antenna like an LP 2-30 mHz mounted atop. I believe the model to be the HDZRN series. Need the slab info as well as the engineering data on the tower.

Any help is appreciated.

Thanks Al W6GSQ

Wonder if you've really looked under the hood of the venerable old IC-22S? Its a real nightmare to trace circuits, let alone, understand them, even with a schematic. Physically, rather risky at this age, to pull apart to trace the boards out.... lots of interconnect wiring going everywhere.... not elegantly laid out like more modern rigs.... and this unit did not have a VFO, but a matrix of diodes in a very confusing-to-diagnose PLL circuit.

Hello All!
I have the following for sale: Get em for Christmas before they go on ebay !
Make an offer !

HEATHKIT SB200 LINEAR AMPLIFIER. Very Good Condition- No dents or scratches.
Loaded 400 watts carrier out into Cantenna dummy load.
Has manual. Pics available and will ship CON. US. but prefer local P/U in
Cleveland Area -- will drive 1/2 hr..

3KW ANTENNA TUNER. MFJ989C with digital readout in Very good condition.
Small dent in chrome of tuning knob.
Has manual. Pics Available and will ship CON. US

KENWOOD TH22A 2 meter HT. In excellent condition. Has leather case and 2
extra batteries. Original box and manual
Ac supply etc. Pics available and will ship CON. US

SPEAKER-MIKE for above . Works GREAT! Pics available and will ship CON. US

FRIEND,

Hi. Check out www.ChezBrandon.com ; it's awesome. As are you, Brandon is highly intelligent, knowledgeable, and good. May you have an awesome day.

A Succinct Warning: Elements of the Mossad, sated with cash from the murderous and destructive narcotics trade, are using some medical, pharmacy, and food service workers to murder men, women, and children. (A certain tasteless acid, for instance, causes cancer.)

Victor Ostrovsky's books BY WAY OF DECEPTION and THE OTHER SIDE OF DECEPTION: A ROGUE AGENT EXPOSES THE MOSSAD'S SECRET AGENDA offers elucidation, as does James Ennes, Jr.'s ASSAULT ON THE LIBERTY.

Again, may you have an awesome day, and check out www.reopen911.org and www.ChezBrandon.com

Sorry I thought I got it there, instead look on the Icom site,,,4.357 Kb.
Larry had all this info but he must have lost it.
Eskay.

5605. Kenwood TS-940S Receive

Newsgroup: rec.radio.amateur.equipment

I have a Kenwood TS-940S/AT that I recently purchased from a friend who was the original owner. It performs beautifully!! I recently came upon a web posting on another forum site from a Brizillian amateur about a problem he found regarding several production wiring errors including the incorrect installation of a couple of FET's in the receive mixer and RF amplifier stages. He seemed to imply that this problem would exist in all of the 940's I don't believe that this is the case with mine, although I must confess that I haven't looked that closely. Has any one else heard of this problem, or found it in their radio and corrected it? My radio seems to work too well to have this problem.

There are a whole bunch of TS-940 service notes available online at
www.kenwood.net (click "Amateur Radio" and then "Service Bulletins").

I don't see the specific problem you describe being mentioned, but I
didn't look too deeply.

It's certainly possible that the production error existed in only one
batch of TS-940S receivers. Only way to tell for sure if it affects
your unit is to test it or open it up and look at the circuitry, I
suppose.

Source record: 12280

APRSPoint is a complete APRS package with integrated street-level maps.
We are offerring a thanksgiving special. Now you can APRSPoint license
plus MapPoint 2004 for $88.95 instead of $109.95. Please visit
http://www.aprspoint.com/ for details. Thanks.

5608. For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-25 13:05:23 UTC
From: David J Windisch <davidjw@cinci.rr.com>
Message-ID: <n_Dhf.233899$Il5.12776@tornado.ohiordc.rr.com>
Source record: 12281

Hi, all concerned:

For sale:

1. 80-10M Drake L-4B amplifier, sn 1010, Eimac tubes, pwr supply sn 1000, book, in good condition electrically; cosmetically, a few scuffs around the front edges. No issues with it; I simply got an amp with 160M. If you pick it up, I could demonstrate its 600W out on c-w and 1100W out on ssb. 10-day money-back warranty, provided it comes back in the same condition it leaves.

2. Meissner Signal Shifter exciter in good working and physical condition; 3.4-30 MHz, copy of book. I got it to drive a homebrew 4-400 to a KW on c-w, but that's not going to happen.

3. ESS TIME MACHINE: complete info at:
http://www.expandedspectrumsystems.com/prod2.html
I have band-filters and 9 different crystals for 40-30-20-15-10M, FLX-90, LO1 external-lo buffer, wall wart, all manuals. Got this for experimenting with homebrew software-defined-radio, also not going to happen.

4. Original service manual for Kenwood TS850SAT. Sold rigs; buyers didn't want it.

5. Before-MFJ HyGain TH7DX broadband tri-band antenna, good condition, original book.

6. Cushcraft 402CD pre-XM240 2-element 40M yagi, good condition, with CC 40M rotatable dipole I got to make 3L yagi out of 2L.

7. TMC IPA r-f deck, uses PL-172/8295A (no tube; same *socket* as 8877; chimney could have 4-inch OD-3-1/2orso-ID machined hi-temp non-conductive ring sitting on 8877 to cover over difference in tube diameters), 750pF Tune/1000pF vac variables with turns-counters in 2-30MHz bandswitched tank which has 3/8-in silver-plated conductors, 2 multi-meters, 6CL6/6146 bandswitched driver, no power supplies.

Pls make offers, and remember shipping from 45251. Antennas can be disassembled far enough to fit in those concrete-form tubes, for shipping. You know; those ones you've seen in bigboxhardware :o)

Tks for reading.

It's the FT-90R. I have one, and yes, they have some heat problems, but there are also work-arounds for those problems. It seems the problems go away somewhat if you never set the step size to 5 KHz. Also, I mostly operate it at 20 watts rather than 50 watts.

That said, I find it to be a great rental car radio, I have the cord wired to a heavy-duty lighter plug. I pack it in a small camera bag in my suitcase along with a mag-mount when I fly somewhere, and I'm usually on the air before I leave the rental car lot. With the software from RT Systems, I already have the memories set up before I leave home.

The IC-746 has not been in production for a few years. The IC-746 Pro is its replacement and Icom has not indicated any schedule for its demise, yet.

Radio Specialty Model 1179-22-1 Repeater----------------$ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed, but inside is very clean!
Repeater is in a wall mountable battleship gray cabinet,
that is 4" deep by 13.5" wide, by 21.5" tall, and is
around 30# in weight. It is a VHF base/repeater used by
the BLM out west...
It also has on the front cover, I-5YACC, then under it is
271, under that VHF REPEATER. There are a lot of FCC type
acceptance # all over inside, plus the maker, and maker's
partial address, and part # for transmitter, and receiver
sections.
NO documentation.

2 Kenwood TR-7950-----------------------------------EACH-$ 80
Each comes with mobile mount, and 1st sale gets the
packet adapter. Are in very good shape, but do not include
the TU-79 PL boards which are available at www.piexx.com
They will not come in original box, and if I do not have
the manual, I will photocopy, or pdf one (your choice)...

Standard C468A LNIB-------------------------------------$ 75

LinkXcel PS-141B 4 port KVM Switch with 4 cables---------$ 65
-Like New- This is the PS2/VGA model -No manual-

Pioneer DRM-602X Scsii cd changer that uses Pioneer------$ 15
audio cd carts. -No manual-

2 IBM Thinkpad 350 laptops--------------------------EACH-$ 25
128M HD, 16M ram (max), Paper White LCD, loaded with
Dos 6.22 and WIN 3.11 .
Both need new batteries (MAIN/CMOS), the cases are scuffed,
and shows age. One has slight blemish on LCD...
Would be great for packet and programing older radios...
No manuals

All items will include manuals unless noted.
Shipping is NOT included on any item(s).

Pictures of the radios can be found at www.mantico.com/4sale.htm
I will have all items on line as soon as possible.

I am in need of a Kenwood SW-2000 manual. If you have one and could make a copy of it.
It would be appreciated. I'll be glad to pay for the copy and shipping.

Thanks

Steve

5633. Here comes the Digital TV disaster

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-27 16:29:50 UTC
From: Kookwatch 968549 <undermyhat@yahoo.com>

Here comes Digital TV !!

http://www.dtv.gov/

(....otherwise known as the FCC's pending DISASTER when regular
analog broadcasting goes off the air and suddenly millions upon
millions of TV sets suddenly are "obsolete" and no longer work)

Can you just imagine what will happen the first weekend after
the DTV shi+ hits the fan and Bubba can't watch his BALL
GAMES or his NASCAR on his, now utterly useless TeeVee...?
Unless of course he buys a $100 set-top converter box for every TV
Want to talk about an excuse for rioting in the streets? Here it is, or
will be soon!
Not to mention also the fact that DTV will cause RFI to public
service commnications to go thru the roof, including cell phones which
will be useless anywhere near the transmitter. (this should be fun)

http://www.dtv.gov/consumercorner.html#obsolete

"The target date for the end of the transition from
analog to digital television signals is December 31, 2008.
That date may be extended, however, until most
homes (85%) in an area are able to watch the DTV
programming. At that point, broadcasting the
current ï¿½analogï¿½ channels will end and that spectrum
will be put to other uses. Until the transition to DTV
is complete, television stations will continue broadcasting
on both their digital and analog channels."

DTV broadcast is HIGHLY prone to multipath distortion problems
caused by shortcomings of the 8-channel vestigial sideband (8VSB)
transmission standard, which has been mandated for use by all
broadcasters in the United States by the Federal Communications
Commission. In short, if you think it was hard to get TV reception
back in the 60's and 70's before cable using a pair of rabbit ears
then you ain't seen nothing yet! With DTV you get nothing if even
one bit is missing from the broadcast stream. Black screen DOA.

Finally, here is the URL of the people who pushed this
pending disaster thru Congress: http://www.dtvcoalition.com/

Other articles on how flawed DTV really is and how
consumers are likely to react in anger when their sets
go dark in late 2009: http://dtvfacts.com/

Most people already have the necessary converter. It's called a cable
box. The STBs for the rest of the peeps will most likely be ca $25.
Closer to that than $100.

Oh, really? High-quality, flat-response tuner / IF strip / demodulator,
plus a scan convertor to convert from any of the gazillion digital
formats to NTSC, and RF modulator and power supply, all for $25 consumer
price?

People talk like this whole DTV conversion is coming as a surprise.
It's been planned and in the news regularly for the last decade
(literally). This isn't some overnight switheroo that Congress is
trying to pull. There's been plenty of advance notice. If some people
choose to ignore the news and are surprised four years from now when
they can't watch regular TV (and that is only if they receive over the
air only, which applies to roughly less than 15% of the country), so be
it.

Personally I'm looking forward to the highly increased picture quality
and digital surround sound that DTV can provide. If some people want to
stick with their 1950s technology, so be it; but don't hold it against
those of us who want to move into the 21st century, thank you very
much. Many parts of the world like Japan and Western Europe have pretty
much moved to DTV already, and those countries haven't been engulfed in
mobs of angry people who can't watch TV anymore.

Larry-

Wasn't the IC-22S the one that had stainless steel pins connecting the top
and bottom of the PLL board? As I recall, it was just a matter of time
before they all lost contact. The solution was to replace them all with
copper wires, and it wasn't easy!

The problem isn't moving into the 21st Century, Mr. Futuristic Modern Dude.
We're already there. The problem is *removing* the existing broadcasts.

There'd be room for everyone if Congress wasn't so easily bought by
commercial interests bent on forcing the public to throw away literally
TRILLIONS OF DOLLARS worth of equipment.

I'm as far from a treehugger as one can get, but have you given any
thought whatever to the landfill problem when hundreds of millions of
television sets suddenly need landfill for disposal?

That's completely silly. No one could make *anything* for $25 if they
are forced to do it in runs of ten or fifteen at a time because the
suppliers don't have parts.

> http://www.ati.com/products/nxt2000/features.html

Vague.

> http://www.st.com/stonline/press/news/year1997/p686p.htm

Here you might have something... except the chip has to be about 25
cents to pass the rule of 10. Figure $8 in 10,000 qty, then your
set top box might make $100.

I don't think things are as bad as you portray. It will be over 3
years before a hard cutoff, maybe longer. In that time many thousands
of TV's will need to be replaced anyway. Or the owners will simply
want to update to a new plasma, etc. And don't forget the many
millions of people on satellite or digital converter boxes like us
that won't be affected. I don't think the sky is falling just yet.
No doubt it won't be a pretty picture when the time comes.

I can't speak for Europe.. but Japan is still using both NTSC (terrestrial)
and HDTV (DTH satellite). They plan to remain that way for the foreseeable
future.

The auction of the analog spectrum is going to bring a lot of revenue to the US government. I don't see how that's a bad thing, as long as that money is used responsibly. Granted, we're talking about our government here...but at least they're taking in revenue and not spending it on something, in this case. That's usually considered a good thing.

And again, those sets aren't going to "suddenly need landfill for disposal." They'll still be perfectly usable with any of the following:

- a cable box
- a satellite box
- an over the air digital to analog converter

Furthermore, you can still use that TV for other things...say, in a kid's room to play video games or watch movies. Granted, most people won't want to hold onto them forever, but they won't be totally useless pieces of metal and plastic. As far as the environmental concern, I wouldn't be surprised if companies start asking for sets for recycling, like we already see widely with cell phones and other consumer products.

I don't have a link to a story right now, but I've read that the government is also going to be spending money to get converter boxes for poor people who can't buy them. So again, there's not going to be this huge mass of angry TV-less people that pundits have been insinuating. Also, keep in mind that as more and more companies build more and more DTV sets, the prices will keep coming down. You can already get a DTV capable set for well under 1000 dollars US. Within the next couple years the price of a DTV set will be where analog sets are right now.

Sincerely,
"Mr. Futuristic Modern Dude"

Ever price one of those cable boxes? They probably don't cost much to build, but if you go to buy them, they're on the order of $300-$400, at least the addressable ones. The cheapies, that do no decoding still run into the $100+ range for one that doesn't break in a month or two.

We could load B52's with old TV's and carpet bomb Iraq with them!

<snippety>

Money used responsibly != Our (alleged) Government.

Don't get me started. This is a ham radio newsgroup. I'm not about
to clutter it with a polly-ticks flame-war.

Keep the peace(es).

5 Newsgroups?

and my set top box was free when I signed up. I get excellent picture
and sound and no interferrence between the ham stations (One in the
shop and one in the house). 1.8 through 440. Legal limit 1.8 through
30. 100 watts out on 50 MHz and 200 watts on 144 MHz.
I'm running an Alpha 76A in the house for HF and a Henry 2K-4 in the
shop.

Remember Digital is not necessiarlily HDTV, but they will be moving up
out of the VHF bands.

BTW, the computers and ham rigs are less than 3' apart and the network
cable runs with the coax cables for a ways.

I can run a 2-meter HT on the desk with the computers running although
if I get within about a foot of this one it will open the squelch.
Still I can set the HT next to the left side of the monitor and it
works fine.

Just put the set top box in front of it and they'll work fine and that
set top box is a lot cheaper than a new set.

I wouldn't miss the major netowrks if the disappeared tomorrow.
The only thing I watch on VHF is the local cable channel with our town
meetings on them and occasionally public TV.

C-band satellite is still NTSC on a number of channels. People have
to remember that Digital TV is not HDTV. it can be but that isn't
necessarily so.

Tain't nearly that bad. It depends on what bits are missing, but what
happens it the picture will start to break up if enough of the right
bits are missing.

You do need a good UHF antenna for local HDTV at present and probably
will for Digital as well. Rabbit ears definitely will not cut it. and
if you live near woods it's likely a small antenna on a roof mounted
tripod won't either. I get a reasonably good signal for 60 to 90 miles
and do copy one station quite well from nearly 100 miles (Traverse
City), but their digital antenna is out this direction so I'm not sure
just how far it is to the antenna.

Yup. Free.
Both my cable box and my digital satellite box were free with a years
subscription. Actually the same went for the cable modem at 3 Mbs
with free installation which meant running almost 200 feet of cable .
It's a 130 feet from the pole so that's 160 feet and there are 3 drops
in the house so I guess it's a tad more than 200 feet along with 3
splitters which are cheap.

I'll probably keep right on using the one old 37" analog set down in
the basement until it gives out. The tuner gave out long ago, but I
use it as a monitor with the VCR as the tuner.

You don't have to throw away anything. Just buy the converter if you need
it.

I got a $20 plain-jane antenna and it works fine for HDTV.

My situation exactly. While I'm at 2500' ASL and my local stations
are at 8800' and 4500', there are higher peaks between them and me. So
signal levels are down and reflections off local peaks (that are
line-of-sight to me and the transmitters) are as strong as those via
the obstructed path.

This is a technological disaster, which of course is what you get when
you put politicians in charge of science projects.

DTV, BPL, the morning after pill, all screwed up by politicians with
agendas.

I meed a good excuse to quit watchin' the "BOOB TUBE"
maybee this is it...

I us'd to repair TVee... Most people were satisfied with
a picture that looked like a pair of those 3D glasses when
the show wasn't in 3D...

If you done anything to make it better they complained it
jus' doesn't look rit'...

I have a set of GONSET Twins: G66B Receiver, G77 Transmitter and Power Supply/Modulator. I actually made a QSO on 80 AM. Also a spare G77 and Power Supply/Modulator. Also have the ORIGINAL Manuals for both. $250 the Lot, BUT YOU HAVE TO PICK IT UP. I cannot lug it out to get packed & shipped (two bad knees). I am in Lexington, MA (02421).

We could put up kiosks at the border full of discarded TV's. They will
be so busy carrying them back home to resell they won't come over to our
side. By the way, they are getting ripped off by employers in US who
work them all week and then don't pay, or have them conveniently deported.

"... all for $25 consumer price?"

DVD players for $17.88? Portable DVD players and even DVRs under $100?
Check. Routers for $5? Check. 20" color TV with remote, $79.95? Check.
Laptop for $400? Check.

Hardly seems possible, but the ads are in the Sunday paper every week.

Big problem is all the lawyers on the FCC board,

only two of the current comm. have any tech
degrees, all the rest are lawyers and political types.

DTV, BPL oh yeah baby, the wave of the future.

BPL nirvana of internet access

The local WalMart had a 24" color on sale for $99. The 19" for
the same price included a built-in DVD/CD player.

Cheers and happy shopping

>about the mountains.

I'm not "whining" about the mountains, I'm pointing out that a bunch
of dumbshit politicians with dollar signs in their eyes made some
stupid decisions (pardon the redundancies) and are trying to foist
upon the public a technology that is both unnecessary and unworkable
for a large number of people.

When my government takes something away from me for no good purpose,
then I'm going to complain about it.

It's also curious that when I asked the chief engineer of a local VHF
TV station, who is a personal friend, why they didn't put a UHF
translator out my way he replied that they have wanted to for years
but the FCC would not grant a license. That spectrum is too valuable,
doncha know. So public interest isn't important, revenue is.

And I sure don't to pay big bucks to know what the weather is, when I
can walk outside and get an accurate picture, rather that some
wild-ass guess.

No problem. Congress has it's hand in your pocket and is going to make the industry give ATSC converters to everyone who wants one. Paid for by your tax dollars.

Wait and see.

Translators are granted on a ''Secondary'' status meaning that if a
higher priority use is sought for the channel the secondary user must
vacate. Otherwise they chug on for years.

Hi there:

I got a Kenwood MC-42S on a garage sale, but some of the wires inside the microphone have come loose. I was wondering if there is a wiring diagram out there somewhere for this microphone, or if someone could tell me where each wire goes so that I can re-attach the loose ones and make the microphone usable?

Thanks alot

Glenn Jensen

All five of the Commissioners are political types - have to be in
order to be appointed and confirmed to that position.

Two with technical degrees? In your dreams. The last "engineer
Commissioner" was George Sterling during the late 1940s. In the
1980s some of us wanted to have the Comm Act changed to require at
least one to have an engineering degree but we were shot doen by the
political types.

It's on the mirror:
http://bama.edebris.com/manuals/knight/kg650/

You need a .djvu viewer such as DejaView or Irfanview to open it. The
schematic is on the second page.

How so..? Had mine since they came out, no problems at all with it, what's your beef with it..? I like it because it has 2 mic sockets, I have the fist mic plugged into the control head mounted on the dash and a handsfree mic plugged into the main unit under the front passenger seat. An excellent design IMHO.

Take a peek here:
http://www.kenwood.net/indexKenwood.cfm?do=SupportFileCategory&FileCatID=6

they have pinouts of many of their connectors, though yours specifically
isn't mentioned. However you could buzz out which wires are which on the
microphone and check against the likely suspects in the list.

Cheers.

Ken

Indeed, but you didn't answer the question, why don't you like the Icom
2725..?

Incidentally, lost the manual to mine a while back, rang up W&S and they
sent me one FOC. How's that for service..?

5716. my new mobile install - any thoughts?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-11-30 23:37:15 UTC
From: rjvalenta@yahoo.com
Message-ID: <1133393835.512648.6570@g43g2000cwa.googlegroups.com>
Source record: 12189

so I finally got my new IC208h installed in my 2002 Jeep Grand Cherokee. I did a little research and some brainstorming, but my lack of experience has me here hoping to get some thoughts on things.

I feed the radio from a relay that switches off the cigarette lighter fuse, and feeds directly from the battery (as was somewhat reccommended here). The antenna is a dual band hamstick, and feeds in via 3 types of cable, including 18" of mini-coax to get through the liftgate seal.

The whole thing can be found at :
http://www.richardvalenta.com/radio/

I'd like to hear what people have to say about things, and I'm thinking of clipping some of that excess RG58 by the antenna, and replacing the PL259 end with a ring and a different mount from the hamstick people - has anyone used a dual-band radio with this 'ring and spade ' type of connection?

Ideas and thoughts appreciated, thanks.

Richard

That's a pretty nice installation, Richard. One thing I would do is run the negative lead for the radio to the battery as well as the positive lead. Having a relay in line is nice, but then you have to leave the key on in the JGC when you want to use the radio. Sometimes on ARES/RACES exercises, the radio is on all day. I don't mind pushing the button after I start the ZJ, and again when I park it.

I always recommend using a larger gauge wire(s) from the battery compartment. I bring them to posts under the back seat, then I have plenty of power without any voltage drop for any equipment in the rear of the vehicle. I actually use 4-gauge wire for both leads.

Working with large gauge wire in a vehicle can be a real pain. So I take the easy way out and take my vehicles to an automobile stereo installer. They work with large gauge wires all day, and their workmanship is usually superb. Much better than I would ever do. I think they charged me $30 for the labor, and I provided the wire, terminals, etc. I did take out the passenger seat so they wouldn't have to deal with that. Probably saved me a few bucks.

Finally, I would comment on the excess RG-58. Just cut it off and install another connector. It sounds like you are trying to avoid doing that, but it's really not that difficult. That's the only change I would make in your installation. My other comments you can save for another vehicle and another time.

Dick -

I was thinking of cutting it off, and going with a simple ring and the corresponding mount from the hamstick guys... when I say ring, I mean something like....

http://www.firestik.com/images/coax-a.gif

But I've only seen that referenced at hamstick (who seems to target HF more), and for CB installs. Is there a reasons for this? are ring & spade cable ends not as effective for VHF & UHF use?

I'm always learning...

Richard
N0TZC

PS - thanks for being constructive, i made the same post on a board online, and some guy made me feel like a fool on this- my first install ever. its good to know there are guys out there who are willing to help.

There is really no problem using either the ring and ground lead or
the coax connector. You don't run into problems until you get a lot
higher in frequency. The only thing is if you need to modify the
antenna mount in order to use the ring terminal, then it wouldn't make
sense to do it. If you use the ring, keep the leads as short as
possible. Especially the ground lead.

Ivor, I think Jim didn't find the RF gain control.

I'm delighted with mine- there is only one spot locally I have a problem (a
50m or so stretch on route to work). However, if just tweak the gain even
that is OK.

Particular spot bugs most of the locals that pass that way I understand-
with a variety of radios.

One local has a problem at his home which was attributed to IC2725 rx
performance but I understand has since been attributed to another source.

FOUR messages Jim and you *still* haven't answered the question. *WHY*
don't you like the radio..? If it's because you think something on it
doesn't work the way you think it should, or you think the sensitivity
isbad or whatever, why don't you say so..? Nobody will think any the less
of you if you have a valid reason, but just to say you don't like it with
no explanation is like a little boy stamping his foot and saying "because
I don't..!" which gets you nowhere and does nothing for your credibility.

Ok, so you don't like it, no need to swear. I don't like a lot of things,
but you don't see me foul mouthing all over the place about them.

You profess to be a radio amateur, try behaving like one if you want any
credibility.

Ivor

5752. Re: Bird Watt Meter Slugs

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-02 01:09:57 UTC
From: Jim - K5LAD <Jim.-.K5LAD.1ze7hm@news.radiobanter.com>
Message-ID: <Jim.-.K5LAD.1ze7hm@news.radiobanter.com>
Source record: 12076

Hi Ed --
I was surprised to see the entry here on RadioBanter showing some of
the info from my website on repairing Bird slugs. I just wanted to
mention that my website is not at all defunct but is still very active
at:

www.hayseed.net/~jpk5lad/

and that particular part quoted was from:

http://www.hayseed.net/~jpk5lad/BIRD%20Slugs/birdslug1.htm

If anyone is interested there's a good bit more info on links off the
same URL as above. They've come from others who know a lot more than
me who have seen my article and sent me the additional good stuff.
I've reproduced it on my website with their permission.

I'm glad this information is of some value to others. That makes it
all worthwhile.
73,
Jim - K5LAD
k5lad@arrl.net

Within past two weeks came into possession of Collins R-1155/GR receiver. Searched the net for info on this radio with no luck. Can anyone tell me where I can locate literature on this unit? Would like to either try to make it work or sell it. Unit is fairly complete - missing one knob.

Thanks

Any one know of a 6 meter FM repeater in the South Tampa area?
Something simplex?
I think that my RT-70A/GRC works right up to the last audio amp tube.
It has a 1 khz signal (using a Tek 2465) there but no output to the ear
piece after I provide an FM signal (8640b) at the proper frequency. When I
get the 3B4 tube I have bid for on Ebay for, I'll know if I have a
functioning FM 6 meter radio. I think the xmitside works but I need to find
a local repeater to confirm that.
Anyone had or has one that has or does does work?

5765. Help with TM-733A mod

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-02 23:44:28 UTC
From: JC <newsgroups@unixtricks.com>
Message-ID: <11p1nnhtcvanta2@corp.supernews.com>
Source record: 12088

Hi all,

I've got a Kenwood tm733a transceiver and I'm trying to figure out how to perform a few mods on it. The first one I'm trying is the Extended RF mod.

I've located the chip labeled XRU4066BCF and the two jumper wires, and I believe I've found the two resisters in between, but they dont look as I would have expected. They are green and there is no label anywhere on or near them. I'm also not sure how to remove them from the board without breaking anything, as they are glued on rather well.

Any suggestions for a noob like myself?

-JC

Sure, but I was very disappointed with mine, tho.
I had an HTX100 and bought the book from RS.
The last one here (VK) they said.

Somehow all my handbooks, which were in a folder
together, were in the magazine holder in the
lounge and were turfed out by the XYL. (quite
unintentionally).

Long/short) their photocopy was quite unable to
show the shaded copper parts of the boards and was
essentially useless. A friend did some copies at
work from their handbook library and they were just great.

As you say - mileage may vary.

And mine are only 8X for DVDs and 40X on CDs. <sigh> Left behind
again<:-))

BTW I live about 14 miles from the world's largest Poly crystal
Silicon supplier. I think they also sell wafers. (very large wafers).

In 1960 a single crystal rod of the best purity you could get sold for
$165 a gram. Today the poly is of higher purity than those 10 pass,
float zone refined rods and as I recall it sells for something like a
couple bucks a Kilo. . Back then a single crystal rod of 3/4"
diameter and 16" long was about the biggest thing you'd see with poly
rods about the same size.
Now days wafers are running some where between 10" and 14". I'm not
sure the current size as I've been away from it for a long time. Poly
crystal rods are huge. It takes power hoists to move them.

Some time in the late 60's (as I recall) they were able to change to a
new method of sawing wafers which reduced the waste by about 50% or a
little better. At least one firm went out of business as overnight
they had doubled the single crystal yield with no increase in, cost,
time, or labor.

Last week there was an article in the local paper that the plant is undergoing another expansion. Not just an expansion, they are doubling the plant capacity and they are already the world's largest supplier but a good margin.

They have gone from a small operation in a cement block garage while using an old two story farm house for an office building to one huge complex.

Think about the amount of silicon used in a transistor, CPU die, or even the CCD in a camera which is probably the largest typical die and then think of the thousands of metric tons of the stuff this place produces.

The engineering costs to produce any particular IC or CPU are high, but once in mass production it drops to almost unbelievable levels. Remember CPUs starting out at a $1000 dollars or more and in about a year of so they are less than a $100 and often still in production. They end up being dropped from production, not because they are losing money as they aren't, but the new *stuff* brings a premium price so it's a no brainer to make the switch. Sure the price is high so they can write off the engineering costs in a hurry, but they are still making a healthy profit.

The same is true for tuners, decoders, converters, and other set top boxes. As that stuff is mass produced and there is a tremendous market for it, they will be moving to one and two chip designs dropping the costs to a couple of dollars where the broadcasters and cable companies can give them away with each subscription.

A nearby company purchased a large batch of high quality 19 or 20" LCD monitors. The cost was some where in the low $200 range. What was the price on those just a year ago, or two years ago if you could find one that large? <:-)) Currently the price is one of supply and demand for those. They could be sold far cheaper to the individual and it won't be long before they are.

Now If I could just convince my wife of all the good reasons for getting rid of the old 19" CRTs here and going to 21" LCDs. <:-))

I hate to say, or admit this, but I remember when the new TV sets finally came out with 21" CRTs <:-)) and those *were*expensive* Carried forward to today's dollars they cost more than one of the big 50 some inch plasma sets.

Is there something special about the Galaxy that requires balanced finals? I am using a Drake L-4B with a pair of Chinese 3-400ZG tubes. There is no mention in the L-4B manual about replacing the finals with only a matched set, and several other users of this amplifier have told me the same thing.

Man I hate spammers. One freaking post is enough.

Cheap? We did a RDF shootout a few years ago. Ray Jeff is the worse.
Hold out for a Bendix. The Ray Jeff is worth $20 tops, and the bidding
is at $27. Hardly cheap.

I see those Ray Jeffs at the flea market quite often. Twenty bucks is
tops. They are not very good for DFing. There was one novelty Ray Jeff
that had a tracking motor in it, not that it worked well either. The
problem is the null in a Ray Jeff is really shitty.

R-

Perhaps the manufacturer's web site would be a good place to start. They used to have Hams working there, so may be sympathetic to your request if you couch it in terms of moving the equipment to the Ham Band. I think moving them into the commercial band would not meet FCC requirements.

http://www.relm.com/techincal_support.asp

Note: RELM = REgency Land Mobile. I think RELM is what was left after Regency sold their scanner line to Uniden.

If you hide the antenna, you will also hide the signal. Be brave and
put a hole in the center of your roof for a Larsen antenna. Took me a
few years to get up the courage to do that in our Jeep Grand Cherokee,
but glad I finally did. It looks just fine.

From: "Joe S." <anon@mous.com>
Message-ID: <dn1k5s06r@news3.newsguy.com>
Source record: 12121

I have a Yaesu FT-51R handheld. We lost damn near everything in Hurricane Katrina, including some ham radio gear. I saved the FT-51R and a couple of batteries but lost the charger.

I had a drop-in charger for the FT-51R -- it would charge all the different batteries -- FNB-33, FNB-38, etc.

I recently purchased an after-market charger but it's a POS.

Can someone help me out with the model number of my lost charger -- drop-in charger for the FT-51. Maybe I can find one on eBay.

Thanks.

Joe S.

That would be the NC-50 Dual Slot Rapid Charger (desktop). If you
purchased an aftermarket one and you mentioned it is "POS" meaning a
reverse polarity than you need? Can you open the case or cut the cable
and rewire it so it is right polarity for your use?
Vertex had something but is very expensive. Also you could check R&L,
AES or Universal Radio for the charger and sleve/cables?

Very easy. You do have to release the side of the headliner. Use a Unibit to drill the hole, and put a metal plate or something similar under it to prevent drilling into the headliner. In my case, the Jeep had an overhead console. I took that down and could see the roof where I wanted the hole to be. The Larsen mount is designed to be used between a headliner and the roof. I like the ones that use a 3/4" hole, but there is one that uses a smaller hole. When you get ready to sell the truck, just put a Larsen hole plug in the hole. Practically invisible.

Yes, completely invisible on the inside of the cab. Cable goes
between headliner and roof, then down inside door post or whatever to
get to your radio.

| trunking support.

Do any single HTs exist that can transmit on all of those bands? I've
seen tri-band HTs, but not any quad-banders ...

As for the trunk tracking, what you might want to do is find a amateur
radio transceiver that does most of what you need, and a digital trunk
tracking scanner that does what you want, and then use this high-tech
tool --

http://www.fortune3.com/~comp66570/44382228.jpg

to merge the functionality of the two into one.

Yaesu VX-7R, according to their brochure. (I'm a brand new ham, so have
just gotten done researching which HT I want to buy. This one is in the
running...)

HI, check out this MAHA universal charger on ebay. I use to have one of
these and they are GREAT!
If I still had it I'd give it to you!
Ebay auction number 5837945365

or click on the link below. It should take you right there.
http://cgi.ebay.com/MAHA-C777-BATTERY-CHARGER-ANALYZER_W0QQitemZ5837945365

GOOD LUCK TO YOU!!!

Radio Shack's last printed catalog was in 2002. But they do print a
"Reference Guide" which is pretty much the same thing, except it doesn't
list any prices for the merchandise. You have to go online for that.

5819. wtd: Extender boards for Cushman CE-50-A /TG service monitor

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-06 19:21:42 UTC
From: RoDnSuE <stargatesg1@verizon.net>
Message-ID: <1133896902.608755.298380@g44g2000cwa.googlegroups.com>
Source record: 12142

Hi all,
I'm looking to beg, borrow, or buy the left and right extender
boards for a Cushman CE-50A-TG service monitor.
The one I have has an intermittant PLL unlock problem when tuning the 1
mhz digit upward past the 6-7 mhz position. It only happens when tuning
upward, and only on the 1 mhz digit.
One other symptom I have noticed is, the scope shows a large sine
wave when in generate before the unit has warmed up for 10-15 minutes.
If the "frequency zero" control is adjusted way off of center, the sine
wave disapears. As the unit warms up the sine wave slowly reduces in
aplitude until gone. Other than the 1 mhz digit the unit works fine.
After reading the theory of operation it seems the basic PLL should be
the culprit since it controls the 1 mhz digit and probably needs to be
re-alligned.
If anyone has ran into this problem before, or has the extender boards,
I would appreciate any help.

Thanks,
RoD

Message-ID: <BFBBA665.8C8B%kw4z@charter.net>
Source record: 12145

I have made the trip to the local Ham Store and after viewing all the rigs that they had on the shelves I have limited my choice down to the following three rigs listed below.

If there are any owners of the Radios listed I would love to have your input about your radio and would you buy the same again? Also, if there is a person, I would appreciate hearing from someone that has owned one, two or three of the radios listed and how you would compare the lot based upon your operating experience. Also if you had a specific gripe about one? Thanks

Rig #1 IC-746PRO by Icom HF, 50M, 2 Mdeters

Rig #2 TS-2000S by Kenwood

Rig #3 Mark-V (FT-1000MP) Field by Yaesu

I have obtained my impressions of each by listening at the controls of each and while two have VHF and one VHF & UHF while the last is HF only

While I am not going to be making a decision for a while I cherish any input from current or past owners on their experiences.

Gary

Source record: 12146

Odd.... I was about to make the same sort of posting!
Not being active for a while, I haven't kept up with all the new digital
"lingo"
and would particularly like to know if any of the rigs are idiot resistant
to
having blundered a short on the output or what ever. Will all of them load
into a random wire maybe. I haven't even sorted out which have tuners
built in and which need extra power supplies etc for them. It is a long
ways to any "radio store" from Clarksville TN but I guess that is the long
trip to make in the spring after the snow.... Maybe get together a group
for a quantity discount eh. lol Biggest concern is lumping all the bands
into one radio.... it poops out and your down on all the bands while/if
it can be repaired.... I sent an email to ARRL about the write-ups on
the rigs... it is nice with all the tech' fluff but they need to add a list
of
just what it takes to make the radio play... i.e. tuners, power supplies,
mic's, speakers, typical antenna(S) buy a $2000 radio and a $2
wire antenna, filter? like oil? cost like a car - any 5 year bumper to
bumper warranties? lol Sorry only questions like you... no answers yet.

Listenin on the newsy group for replies....

You can get hundreds of user opinions on these radios at URL:
http://www.eham.net/reviews/

But be aware they are opinions, some educated, some otherwise.

For more objective reviews check ARRL QST reviews.
http://www.arrl.org/tis/info/prodrev.html

Also, a DXer or contester will choose radios that work well in those
endeavors, a ragchewer may decide much differently.

Also CW types may have entirely different criteria than phone types.
--
CL -- I doubt, therefore I might be !

First let me say thank you to the folks that have responded, newsgroup and email. I am posting this, as a reply, to help share not only my findings but also reflect a summary of what others have said. Like you, with all the new technology, I wondered can you really tell a difference and is it worth it. From what I have observed, first hand, it is a major advancement the new digital features once you know how to use them and actually implement them on a noisy, crowded band. Without a doubt, to this point, the rig that is shining above the lot, based upon my own observations, and those of many email replies many whom actually are lucky enough to have owned two or more of the radios and used them, is the Yaesu Mark V Field. It is HF only and doesn't include the 6, 2, and UHF bands but it's amazing at doing what it does. As for a learning curve ... Sorry there is a steep one with most any new digital equipment. My suggestion is do what I did, go to the manufacturer's website, find downloads and actually download a PDF file of the actual operator's manual for that radio and start reading. This has been an invaluable asset and somewhat humbling as well. The Yaesu Mark V field manual is 120 pages itself. The other shock, for me, not that it even matters given my case is that there are actually some rigs out there selling from $10,000 to $15,000 for the radio and toss another $10K if you want the Solid State Amplifier, Tower, and decent Beam. Never mind how they work figure out the loose nuts within the head if you buy one of these. Oh if you did buy one then I'd love to be adopted by you as I could never afford one so if there is a beneficial heart that wasn't to play santa email me and I'll surely pass along my email address, address and a kind thank you for making me a happy ham .. Hi hi. Well that's it so far in a nutshell I'm glad to hear others have been thinking of the same questions as I have.

As for me I would love to have one of the new Yaesu FT DX 9000's or the Icom IC-7800 so all you lotto winners or generous hams that just like to send gifts to decent folks I'll gladly forward the shipping address if you like ;) cause I sure don't have the $15,000 to plop down for one of these Bentley of a radios.

I am no authority, but when I had a similiar linear that used 6lQ6's
the tubes cherry plated and took a beating if they were not matched.
Perhaps the Galaxy does not use sweep tubes?
>Is there something special about the Galaxy that requires balanced finals? I
>am using a Drake L-4B with a pair of Chinese 3-400ZG tubes. There is no
>mention in the L-4B manual about replacing the finals with only a matched

"Best looking" is a matter of taste, but here are some antennas and
mounts from just one of the many companies making VHF antennas.

http://www.maxrad.com/cgi/catalog_ind.cgi?catalog=10003

Personally, I'm a fan of NMO (Motorola style) mounts such as this one...
they are very low profile.

Damage - no. Interfere with - maybe. But since you won't be
transmitting at the same time that you're trying to start the truck, I
wouldn't worry about it.

Just bought one and seems to have no O/P.
i get a very faint carrier on another set only and i mean faint !!
RX is fine..
been stood ina loft for 15 years so any possible parts that may have 'died'
over time..
observations are..
no valve glow..
no IC.
very high ALC
i have checked screws/earth etc..
i have removed valves abd checked for obvious damage,
i have checked wires and joints etc..
i only have the ACC plug in the back, you don't need the VFO one to make a
PA circuit do you ??

if it is the valves gone, whats the rough price these days for the 12b and
6js6..
sorry to go on,
i hoped to be using this this week too....:(

Looking at buying a Rig Mate for use with my Icom 706MKIIG.

Not really interested in controlling the radio with computer and Rig Mate interface. This rig is in mounted

in a pickup for mobile use.

Looking for software that will allow me to store configurations and memories. Would like to be able to change

memories by just uploading the info to the radio via the interface. My problem, have not been able to find

any software that can do that. Have seen some that looks promising but have not seen any that seem to say

they will do it for sure. Would like to be able to adjust the memories on the computer and then upload it to the

radio.

Any one know of any software that will allow me to do that?

Take out ALL the vertical boards. Get some good quality cleaner and spray the sockets strips they came out of. Take a pencil eraser and clean the copper plated connectors on the boards.

Then take the cleaner and spray ALL the band switches, rotaries, etc. Let dry.

Since you said no Valve (tubes) lit you either don't have the heaters turned on or the jumper in the plug in the rear is not hooked up. I don't remember which pins that is. Get a book.

If still no joy, drop me a e-mail at w4nti@mindNOSPAMspring.com and follow my SPAM catchers instructions.

I'd recommend using a nonabrasive cleaner rather than a pencil eraser.
I've heard some stories, over the years, about adverse effects from
bits of the rubber and abrasive floatig around in equipment chassis.

When I had a poor-contact problem with a Ten-Tec Scout I'd purchased,
I was advised to clean the board-edge connectors and sockets for the
plug-in band modules. I scrubbed 'em down with DeOxIt and some Q-tips
and paper towels, put the 40-meter module back in, and it worked
perfectly and continues to do so until today.

Dried-out electrolytic capacitors can be another problem with older
gear, especially glassFET models which tend to run hot.

Butch & Laborkei-

The FCC approved it on about November 15th. A week or so ago they started to trickle into the Ham stores. I got mine Wednesday at Amateur Electronic Supply.

If you are familiar with the IC-706, then you will feel at home with the IC-7000. It is sort of the same radio, but with more features.

One minor disappointment was that in order for the radio to be approved for importation into the U.S., Icom had to disable the feature where it can show standard television channels on its front LCD display. (In the U.S., it is illegal to have a radio in view of a driver that can display television.) The version that can, is apparently only available in Japan. It will be interesting to see if the radio can be easily modified to re-enable it.

I'm just getting started learning how to set the radio up. I made one contact on Ten Meters on my way home from the radio store, but haven't done much more. I had a minor problem getting it to recognize an old AT-180 tuner, but that may have been the tuner's fault. Resetting the radio with tuner attached cleared the problem.

The power connector is different from the one used in the IC-706. As far as I can tell, it is identical to the one used by the Kenwood TS-480. AES listed a part number for a cable with the older connector, but they may have corrected it by now.

If you want latest in technology, the IC-7000 is the way to go. If you can do with fewer features to save some money, the IC-706 Mark IIg may be a better choice.

the best thing to clean pcb contact pads is ordinary paper.
even the blank surrounds of a newspaper.

1. rough enough to take dirt off but nothing else.
2. you can see if the dirt is coming off.

Check the messages on the IC-7000 Yahoo! group. People claim to have
discovered and implemented the mods. for TV and for MARS. There are
photos as well. Each mod. consists of removing one small surface-mount
diode.

I don't have one of these rigs, but maybe some day...

Thanks for posting a quick reply to your radio. I am curious, mostly, of the comparison of the receive quality to other radios such as the Icom 746PRO or the Yaesu Mark V field in the areas of being able to utilize the DSP to reduce band noise, narrow in on weak signals, selectivity to strong adjacent signals etc. If you have any input into those areas I would appreciate hearing more.

Let's see....the FCC didn't make them disable the TV video display on the IC-R3, but they did make them disable it on the IC-7000? Someone might think the FCC is capricious.

ICOM probably could have avoided the problem by simply leaving out the "battery connections" instructions for the IC-7000. No one at the FCC would have thought of the issue then.

Hi all
I am looking for a copy of the software that is used to program the FT-8900 quad band radio.I f you have it and want to take the time to make me a copy I would be glad to make a copy of any of the software I have for Yaesu radios.I have it for the:
Ft-8000
FT-8500
Ft-7100
Ft-3000
VX-5, VX-7
Please let me know.Thanks in advance for any help.

Thanks for your comments, but there is good news !
If you join the Yahoogroups for IC7000, they have the information on how to do the MARS and TV Mods that are very easy to do.

The FCC did not make them disable it, it was someone else.
If you look at the FCC website, the documentation from Icom included the TV function.

It's really a moot point now, because everyone is mod'ing the radio now and enjoying the TV feature.
It was easy to enable...

My Yaesu VX-1 here has a totally dead FNB-52Li Lithium Ion 3.6V
700mAh battery. Any one have that clever single AA cell booster insert
to hand instead - although lower Tx power this would be all that's
needed. Alternatively any bright ideas on a repack of the Li battery
appreciated. I'm pretty skilled & the VX-1 is otherwise wasted just
tethered to a mains supply- I might as well sell it if restricted to
PSU indoors, & a bigger more ergonomic set preferred anyway.

5866. R-390A FYI - Radio Active Meter Needles?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-12 00:01:49 UTC
From: "Murray Green, K3BEQ" <mgreen@erols.com>
Message-ID: <439CBDED.858A59DA@erols.com>
Source record: 12039

In this weekend's Radio Amateur Information Network (R.A.I.N.) audio news, they featured Michael Crestohl, W1RC, at the 2000 Dayton Ham-Vention. Michael was deeply involved at the time in working with the U.S. government to remove or reclassify collectible surplus radio gear from its demilitarization list.

In the interview, Michael mentions that the meter needles in the R390A were "radio active" and had to be removed before the equipment could be demilitarized by the government. (It was not clear if this pertained to all of the R390As or certain models.)

Just a FYI to R390A owners. The broadcast can be heard at: http://www.rrsta.com/rain/ (The statement about the meter needles comes in around 11:15 minutes into the approximate 15 minute audio news.)

Just how radio active the needles are was not mentioned. Also I suspect that some R390A went to MARS members and may not have been demilitarized. I had one for many years and this was the first I heard about the needles.

I think thay had radium paint on the meters and some were removed when demiliterized.

The R-390 meter needles, and a number of other equipment models, were
painted with a Radium compound that made them glow in the dark. The intent
was to allow the radio shack to be operated in low-light environments. The
idea didn't last very long, because although the needles would give off a
faint glow, the meter dials weren't illuminated enough to make them
readable.

Message-ID: <1134488984.946918.64960@o13g2000cwo.googlegroups.com>
Source record: 11949

I recently sold my at-250 to a fellow who wants to use it with a ts 830.

I sent him the connection diagram in advance via email, and sent the manual with the tuner.
He says it doesn't work.

I found out he did not make the cable as he says it should be r.f. sensing and should work without any connection.

Another fellow told me he is correct.

I dont remember this feature. My recollection is that the tuner must be triggered by the radio.

Am I correct, or is the at-250 r.f. sensing and will work with ANY rig without connection?(other than coax of course)

Thanks to you all.

Radio Specialty Model 1179-22-1 Repeater------------------$ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed, but inside is very clean!
Repeater is in a wall mountable battleship gray cabinet,
that is 4" deep by 13.5" wide, by 21.5" tall, and is
around 30# in weight. It is a VHF base/repeater used by
the BLM out west...
It also has on the front cover, I-5YACC, then under it is
271, under that VHF REPEATER. There are a lot of FCC type
acceptance # all over inside, plus the maker, and maker's
partial address, and part # for transmitter, and receiver
sections.
NO documentation.

2 Kenwood TR-7950-----------------------------------EACH---$ 80
Each comes with mobile mount, and 1st sale gets the
packet adapter. Are in very good shape, but do not include
the TU-79 PL boards which are available at www.piexx.com
They will not come in original box, and if I do not have
the manual, I will photocopy, or pdf one (your choice)...

Standard C468A LNIB---------------------------------------$ 75

LinkXcel PS-141B 4 port KVM Switch with 4 cables----------$ 65
-Like New- This is the PS2/VGA model -No manual-

Pioneer DRM-602X Scsii cd changer that uses Pioneer--------$ 15
audio cd carts. -No manual-

2 IBM Thinkpad 350 laptops--------------------------------$ 40
128M HD, 16M ram (max), Paper White LCD, loaded with
Dos 6.22 and WIN 3.11 and include ac adapter/charger.
Both need new batteries (MAIN/CMOS), the cases are scuffed,
and show age. One has slight blemish on LCD...
Would be great for packet and programing older radios...
No manuals

All items will include manuals unless noted.
Shipping is NOT included on any item(s).

Pictures of the radios can be found at;
http://www.mantico.com/4sale.htm
I will have all items on line as soon as possible.

If the rig was worth $100 new and $50 now why isn't it worth $25 to fix it??

It'll cost more than US$25 to fix it, since being down here in NZ p&p will push the battery to more like $40 by the time it arrives. Believe me- freight can be SUPER COSTLY. Some dirt cheap DIP8 ICs just sent here from UK had US$20 postage on them...

The request is surely not an isolated one, since it transpires many of those Yaesu VX-1 Li batteries die after ~3-4 years. As mentioned earlier I've considered assorted battery hacks/cell repacks for the set but wondered if this had already been tamed by others. Stan ZL2AJZ

If you're interested in building (with surface mount components), see:
http://www.w1ghz.org/222xvtr/222.htm

Small board. Designed to use Yaesu FT817 as an I.F. rig, but any rig that can provide 24 MHz at 1/2 Watt is useable. Transverter puts out 5 Watts, so an external amp could be used to boost output if desired. I have the circuit board for it, but it's not built yet, so I can't comment much. A friend has one and hasn't said anything bad about it that I'm aware of...

Source record: 11973

I am receiveing answers off forum which indicate YES and NO.

Does ANYONE have an AT-250 which they can hook up WITHOUT any
d.i.n.cable to verify if it will operate as a tuner- r.f. sensing?

The manual (such as it is) is very much lacking in this area.

I have used it with the 430, and with other rigs WITH the d.i.n. cable.
It works fine.

My question is: Will the AT-250 operate with only a coax connection
and d.c. connection and tune from the signal it gets from the
transmitter?

Thanks again.

I have a Heath SB200 that has been modified a bit too much.
Someone replaced the stock fan with a muffin fan and they
cut a big hole for the fan in the RF chamber.

I want to replace the muffin fan with a fan resembling the
stock fan. Grainger sells motor and fan blades for appliances
that look close enough. I just need some data to choose the
right one. Most import is the fan blade size. Second would
be any specs for the motor. Stock motors range from 1/500Hp
to 1/20 HP. I suspect one of the smallers one based on physical
size.

Also the meter seems to stick in a couple spots. I don't
see anything obvious like a bent needle. Any hope of finding
a similar meter that I can move the faceplate? Any place that
can repair meters?

All help appreciated.
thanks
chuck

> Also the meter seems to stick in a couple spots.

Often, especially in the winter months, due to static electricity.

See if wiping it with water or an anti-static cloth helps.

Tim.

Do a google for Harbach Electronics. He sells a direct replacement for
the original fan. Its about the same size somewhat more efficient.
He also has stuff like a soft start up, an electro optical isolator so
a modern transceiver can be used (the original Heath circuitry
switched 115v which is more than modern transceivers can handle.)
I've done all the Harbach mods on my SB-200. He also has a drop-in
replacement for the filter and rectifier circuitry and a replacement
relay.

I can't help you on your meter question.

Nice source. However he wants 40 dollars for motor and fan.
I can buy motor and fan from grainter for 15. All I need is fan
diameter. I might have to guess based on pictures.

The fan is exactly 3 1/2" in diameter. Each blade is slightly over 1"
wide at the widest point (edge). The blades have pretty close to
a 45 degree pitch to them. This is base on actual measurement of
a Harbach fan which I still have to install.

I will also swap this for a laptop with serial port and it has to be PIII or P4 in good condition.

Have 35 lapel mikes for Jedi radios, new in box, never used.

$1,575 takes them all.

[that's only $45 each]

Or, take 17 of them for $816

[that's only $48 each]

Add $10 for shipping, please!

They have the standard connector for XTS, HT1000, MTX and other Jedi radios,
w/lapel clip, and these are brand new in the box with paperwork.
Model number is NMN6191C

Sorry, no other splits or singles requests please!

Thanks and just email if interested!

Why not just get an older laptop running Windows 98 or Me for your ham
programs. That's what I did. Got an old Sony laptop that works
great. I only use it in the Jeep with GPS programs or programming the
Kenwood D700A. If I am at home I just use the home computer. My
regular laptop doesn't have a serial port either, and I gave up trying
to use a USB to Serial adapter.

Do you have to have a serial port on the laptop? Many newer
laptops/notebooks no longer supply a serial port. One solution you may
consider if you get stuck is a USB to serial converter. There are so
many of them out there. A few of them are junk. One that I have found
to work is the Belkin F5U109. I am even able to get it to work with
MS-DOS applications that run in a window in WinXP. The drivers allow
you to select a different COM port in the setup.

Hello N1RSP (George)

Here I run Converter USB 232: USB - Serial (Driver & Manual). Tested to
comply with FCC Standards for home or office use. Model No. U232-P9.
It works very well with XP 4 and AEA 2232 interfaced with Yaesu FT-990.

Good luck, VE2GAG

Well, my last RS catalog is dated 2000. They don't have much ham gear
in the store, anyhow. And as far as the little stuff goes, connectors,
wire, etc., just go online to the RS site, and use their search
engine. Then, upon entering your zip code, you can get the stores
nearest you stocking the item.

By the way, if you go to the Mouser site, you can order their latest
1600 page catalog for free, for electronics parts esoterica...

My last catalog is a 2002, and that was the end. I agree on the
Mouser catalog. The only problem with Mouser is that they send one
every 3 months, and they are huge! To get rid of them I take the last
one to the radio club meeting. They get taken immediately.

The need to have glow in the dark dials etc. caused them to use radium
salts in phosphorus-compound paint to make the phosphorus glow from the
beta particles (I think) emitted by the radium salts.

A watch company in Southern Illinois (Olney) had people paintiong this
stuff on their dials and people wet the paintbrush tips to make them
sharper with their lips and many people were (over time) poisoned

The problem with usb to serial converter is that it runs way to slow on most programs I use.I have the Belkin USB to Serial als another one and just to slow.Direct to serial port is many times faster.

Interesting, 'cause I use my USB-enabled serial port to download data into
flash onto my clients' boards at 115.2K at full speed and with negligible
CPU usage. Maybe it's a settings problem? What does "too slow" mean exactly?

I use a friend laptop which is a 1.2 gig cpu and has serial port and it
takes just 4 to 5 minutes to upload a program.and on the other hand mine is
2.4 with a usb to serial with same program and it takes me 20 minutes to
upload same program to same item.

Yes, they do. My last order, I ordered a small Chicago light bulb to
replace a burned out bulb on a 1957 Heath AC-1 antenna coupler. The
next day, DSL was in front of my house delivering the bulb. (I'm in
San Antonio and Mouser is in Mansfield, Texas.)

No minimum, and the catalog is free and huge.

I think that $25. minimum was Newark. That's a good company, too....
by the way, their current catalogs are now well over 2" thick! DigiKey
has a minimum of $5.00.

12/17/05:

I recently picked up a T-8, and am looking for a Fast Charger for it,
either a ICOM drop in unit with the correct adaptor, or for a generic
(perhaps radio shack) Nimh fast charger, that will work. Also looking
for a battery pack schematic; specifically the function of the center
contact on the outside of the battery case..It is a temperature switch?
Close or open when battery heats up, approaching full charge? Is it a
thermistor that changes R with heat?
How does the ext power/charger jack work? I plugged it into a 12 v
source, and get pulsating current draw, betw 150 and 300 ma, at about
2hz..must be the charger function pulse chargiing the battery. Will
a cigarette lighter connection supply the radio with the full voltage,
and at the same time charge the battery, or does the voltage supplied
equal the particular battery pack voltage? Also looking to buy a batt
pack that can use AA alkaline cells.
Merry Christmas...
info? email me, Pat AA6EG aa6eg@hotmail.com

Hi All,
have a question about the ts130s...has anybody had intermittant display or no display problems with this rig? Mine was intermittant, but now display is dead...looked at mods.dk but the answer for display problems wasnt what was wrong with my rig..can anybody help? Tnx in advance de AA9YP

5967. Yaesu Vx-7R firmware problem???

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-18 11:35:25 UTC
From: Bewlay51 <bewlay51@yahoo.co.uk>
Message-ID: <1Qbpf.16093$b4.7331@newsfe1-win.ntli.net>
Source record: 11940

Hi,

As anybody else seen these problems with the Vx-7R handheld

I have entered a number of frequencies I wish to scan. I have setup PMS to scan these frequencies. The problem is, each time the rig completes a scan and returns back to the start it emits a beep. I can't seem to turn the beep off and enter "a silent scan mode". It's only scanning about 10 frequencies so beeps every few seconds. I have tried all the setting to enable/disable scans beeps, none work.

The other problem is entering "Special Memory" mode. With I press [F] then SPCL key 9, then rotate the dial to select "2 MR Group" then press PTT to confirm, I get an error beep. I cant select OTM or HYP mode as well. I have found I need to select Broadcast or Marine before it works. If I then re-enter "Special Memory" mode and then select "2 MR Group" or any other mode it then works. Very odd!!.

Thanks

5975. CW recv. performance: IC-7000 vs. IC-746Pro?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-19 14:42:49 UTC
From: Bert Hyman <bert@iphouse.com>
Message-ID: <Xns973158C4C5EABVeebleFetzer@127.0.0.1>
Source record: 11947

I'm thinking about replacing my old IC-751A and had pretty much
settled on the IC-746Pro.

Since the new IC-7000 is going to retail for about the same price as
the IC-746Pro, I'll have to consider it as a candidate. The limited
amount of printed material on it makes it look like its receiver
performance isn't much different from the IC-746. The cosmetics and
small size of the IC-7000 are a drawback, but if it works better, I
can overlook that.

Is anybody in a position to compare the two?

I agree that an older computer running Win98SE *should* be more than
adequate for handling ham radio applications, but the author of my
favorite ham radio program, Ham Radio Deluxe, says that he doesn't
always test minor updates of his program (e.g., the recent one that
added rotator control) with Win98SE or WinME and that with the next
major update he may declare WinXP to be the only officially supported OS.

Older computers can also run Windows XP. My comment was only related
to the fact that it would be typical to find something like Me on an
older computer. I have a computer that is over 10 years old that is
running Windows XP SP2 with no problem at all. The Internet wasn't
even available to the public back then. And yes, it does have an
RS-232 port. For many years, it was my ham radio computer, long
before XP was envisioned. Today, with XP SP2 it will take on any ham
radio program. I can also dual-boot it into Windows 98 Me if I have
to have it for something.

I worked in a Kenwood repair shop for several years..My advise is:
check all simple things like loose connections, poor board connections
etc.. At the prices of used transceivers of that age,and costs of
shipping to a service shop,lack of replacement parts.and costs of parts
that are available..I would look for a beat-up old TS 130 that had a
good readout ,buy it and go from there.. you would also have a source
for parts in the future..PS: The TS-130 is a good radio ,with a good
record..It came out in September of 1980 ..makes it 25 yers old

Hi All;
As you all know, i've been think about moving so I need to sell my collection, much is gone but am finding still more:-)
1)-3 Heathkit SB-401 transmitters, none tested, one min. does have the crystals so it can be used by itself,
Heathkit SB-104 w/Matching supply.
Heathkit SB-102 xcvr w/HP-23B supply, not sure about cable.
All above is untested but needs clean-up.
Price is $650.

2)- I have 2 Eldico 100F transmitters & 2-Eldico 1000F amps for $1,000, all untested, one amp needs a meter, I think the 100F xmtrs might be prototypes from Eldico, but not sure.

3)-Swan Twins 600R with all options & 600T xmtr, & Swan matching spkr/patch. I have 2 original boxes, The rcvr works great, never tested rest, Look better than EXC. $650 all!

4)-Hallicrafters S-40 receiver $50

Many parts & tubes for homebrewers, like sockets, roller inductors, Coupla HB Amps, no supplies,
Coupla Roller inductor tuners, (Old HP(?) test gear, freee).
Please, only if you can pick-up on Long Island, NY!
Regards;
Rich WA2RQY

The only problem with Mouser is that they closed their City Sales
counter when they moved into a new building in Mansfield. I used to be
able to go over their and pick out exactly what I needed, but no more.

5993. Ships Radio Room Clocks FS

CHELSEA Timemaster Clock

The 6" Timemaster Quartz Radio Room Clock

by Chelsea (Model 40101)

A rare opportunity to own a Chelsea special, non-catalog Government/Commercial clock.

New, factory fresh in an unopened, factory sealed box.

The Chelsea Timemaster is the pinnacle of maritime timekeeping - and this model features a Radio Room dial. This clock has been used for many years by the United States Navy in the demanding shipboard environment - setting the standard long before satellites were used for navigation - and still in use today.

This Chelsea Timemaster has a silent, high precision quartz movement as specified by the U.S. Military. It meets standards for vibration, temperature and humidity extremes. The accuracy of this quartz movement is +/- 1 minute per year. The Chelsea Timemaster clocks have passed U. S. Navy tests for accuracy, shock, vibration, temperature and humidity extremes.

The sinking of the Titanic resulted in the Radio Act of 1912 that required 24-hour radio watches. The disaster also led to clocks in the newer radio rooms featuring three-minute periods marked in red. That three minutes provided a silent period when only emergency radio messages could be transmitted.

These clocks had an extra hour hand which was set on local time; the regular hands were set at Greenwich mean time (Zulu) since all incoming and outgoing messages were so marked. The red segments radiating out from the center post designated 3 minute periods at the quarter and three-quarter hours to observe radio silence to listen for emergency broadcasts on 500kcs. Later models featured additional green sectors at the top of each hour and 30 minutes past each hour for the monitoring of the 2182kcs. distress frequency. The red marks in the chapter ring designated 4 second intervals to time emergency autoalarm signals used to activate alarm bells on nearby ships and shore stations during the sending of an SOS.

The Timemaster is suitable for use on the enclosed bridge, wheelhouse, and ships radio room, on any Government, Commercial or Pleasure vessel or of course, in any home.

Timemaster is not included in the Chelsea catalog. Produced under various contracts which offer limited availability to the civilian market, and available only through authorized dealers by special order.

This clock is available for immediate shipment to the winner of this auction. It comes in its Factory-sealed (unopened) box.

Features:

6" diameter Radio Room dial
Accurate 12 hour quartz movement (+/- 1 min per year)
Second register
Hinged front bezel
Second hand
Black phenolic case

SOLDERSMOKE!
A SHOW FOR ELECTRONICS HOMEBREWERS!
http://www.ourmedia.org/node/123300

Topics discussed in SolderSmoke 11:
Video of Trivial Electric Motor. Solar powered station on 80 meters. Mike's new PIC-pong game. Coax traps for a 160 meter antenna. Understanding solid state amplifier design. Homebrew shows on the Discovery RealTime Channel. The G-QRP Superdrug radio project. Altoids and I-pods. Listen at: http://www.ourmedia.org/node/123300

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod? Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software.

http://www.ourmedia.org/mediarss/user/36170

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.ourmedia.org/node/123300

We hope you enjoy the program. Please send us feedback.

73 from London

6004. Ethernet Router RFI

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-22 19:57:29 UTC
From: Jim Leder <k8cxm@spam.fuse.net>
Message-ID: <67dce$43ab0528$42a1c00b$29616@FUSE.NET>
Source record: 11877

After several months of just not listening to my 2 meter base station, I finally took time to find the source of the interference that held the squelch open on the repeater channel I listen to most often. Turned out it was my Dlink DI-604 router. I borrowed a Linksys NR-041 router from my neighbor and it works a little better. I can now listen to the 145.390 repeater, not because the Linksys puts out no RFI, but only because it puts it out in a different place (mostly in the 146.46-146.58 range). I will probably invest in a newer router, probably wireless. Question I have is does anyone have any experience with the new breed of wireless routers that are reasonable clean in the RFI/2 meter spectrum? Thanks.

6005. Paolomar VLF converter: schematic

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-22 20:38:48 UTC
From: Steve <zarco@sonic.net>

Source record: 11878

Its a cold, rainy day here so I decided to pull out this VLF comverter and take a look at it. Seems to work OK, but I've noticed that part of the PC board has not been loaded with parts. Seems to be a preamp. A search on the web didn't turn up anything.

I've found there are (at least) two versions. One uses a J-FET and NPN transistor in the preamp (board 1269B), but the version I have only uses an NPN transistor (board 1269D). Does anone out there have the schematic for the 1269D version?

Thanks!
Steve

Back in August I helped my city's ARES/RACES EC chase down a 2-meter interference problem at his condo. An HP spectrum analyzer showed a whole series of regularly-spaced spurs throughout the 2-meter band - most strong enough to de-squelch an HT, and several strong enough to compete with repeater-output signals on the same or nearby frequencies and make communication difficult or impossible. He had the usual "cable channel 18" spur on 145.250 (not a new problem at his QTH) but the multiple spurs were something new.

By plugging a measuring-tape Yagi-Uda foxhunt antenna into the spectrum analyzer, we quickly localized the source of the signal to the neighboring condo unit, second floor, rear of the building, polarized 45 degrees from vertical :-)

He spoke with his neighbor, and they quickly identified the neighbor's new Netgear 802.11b/g WAP/router/switch as the cause. We did some RF-snooping with the spectrum analyzer and a rubber duck, and determined that the spurs were radiating from within the router's case itself. The source seemed to be on the right side of the case, just in front of the DC power inlet jack. There was no significant spur radiation from the power cord itself - it was coming from the PC board, and whatever ferrites or whatever Netgear had put on the DC inlet were doing their job just fine.

My conclusion was that the Netgear model in question uses a buck-mode switching voltage regulator, operating at a switching frequency of about 30-40 kHz (the spacing of the spurs we saw), and that its internal switch generates very fast current rise/fall times which radiate harmonics from the PC board.

I ran a similar test on an older model of Netgear wireless router (one of a couple I'd picked up at a swap meet) and observed no such

problem. The older router's switcher does emit some low-level 2-meter hash into a nearby probe, but it's much less energetic and appears as broadband RF noise with no significant peaks. Possibly the older unit has a spectrum-spreading feature in its regulator, or possibly it's just a better design RF-wise (slower switching edges, self-shielding inductors, better grounding/routing on the board, etc.).

The noisy router is a Netgear model WGR614 v6 (802.11b/g), FCC ID PY305100002.

The non-noisy one is a Netgear model MR814 v2 (802.11b), FCC ID PY3MR814v2.

My EC's neighbor (a retired EE who takes Part 15 quite seriously) went out and bought a different model of b/g router, and the problem went away. I'm afraid I don't know the number of the replacement model.

Given how frequently manufacturers revise their hardware (every time their OEM gets a new batch of parts, I suspect) I think you're probably going to have to test individual models for acceptable QRM levels. A model number which looks OK today, might or might not have the same guts in it as a unit of the same model number that you buy three months from now.

A year or so before that, a few other guys and I used the same HP spectrum analyzer to locate the source of some QRM which was causing a buzzing squelch-tail interference on numerous local 2-meter repeaters. It turned out to be a Netgear 4-port wired-Ethernet hub, which was howling like a whole chorus of dire wolves on a high-order harmonic of its (drifty) internal crystal's frequency. The signal was apparently getting into all of the 10BaseT wiring and back out the power cord into the mains... his whole apartment was radiating. From a block away we could "see" when the owner started to download files from the Internet, thanks to the strong pulsing spur which would appear somewhere in the 2-meter band.

I offered him one of my spare 6-port hubs (an Airlink) in return for his defective unit, he agreed, we made the exchange. Problem solved, hasn't returned.

FT/FS Amp Supply LK800 NTC TNY
Forsale Or Trade for ham gear etc.
Hi
I have a LK800 TNY NTC No tune amp
I bought it a month ago and spent 3200.00
Beleive it or not.
I see it arked on the high voltage board and I see where it is,
looks like a diode?? Anyway, I replaced the fuses
and it comes back on and voltage reads correct 3000 Volts
The softstart light now does'nt come on so I do have a new one in the
box to go with it. It needs work and I'm moving on because I have
another amp.
So again Make offer or trade offer.

Hmmm, I have the same router, with no problems at all, and it is about 1 meter from my radios.... try winding the power cord together in one bundle, and use it at 100 tx/rx with Cat5e or better cables. From my router, the wan goes to a DSL box, and the lan is hooked up to a Gigabit switch, and a 10/100 switch, all with no interference noticeable..

I do not have any answers to offer, however I do have that same router
and have had RFI problems since getting it. Mostly an issue if I'm
using the computer while playing on the local net - my nontechnical
solution was to stop using the handheld by the computer. I've found
that once you get about 3 feet away the problem is greatly reduced.
My 'real radios' which are at the opposite side of the room, and have
external antennas, are not noticably affected.

One more thing you might try, is to line the inside with aluminum foil
thats at ground potential...
I have just checked mine for rf emissions using my Standard C168A as it
has a very good front end. I have found that I get more rf from my
laptop(s, than my desktop(s)/server(s)that have all metal cases. There
is very little from my network connections..

I've heard from more than one source regarding D-link routers causing
interference. Seems the switching PS is causing problems in HF radios.
The company says it does not have a problem.

I use a Asante router and it is quiet.

I replaced a Linksys 4 port router with a Belkin to get a spur off the local
repeater. It was so strong I could not squelch it out. Not sure where the
Belkin puts the spurs if it has them.

Does it happen with no network cables hooked up? If not, try some shielded
CAT5 cables (they have a foil layer in the cable and a metal shell over the
RJ45 connector).

6016. D-104 Refurbish?

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-23 08:42:34 UTC
From: Mike Fairleigh <cantreplytothis@sbcglobal.net>
Message-ID: <htSdnQ9IXeK5JDbenZ2dnUVZ_tGdnZ2d@comcast.com>
Source record: 11889

Hello,

I have a D-104 lollipop which I obtained new in 1975 or '76, which I'd like to rebuild. Unfortunately, it needs a lot of work:

1. Head connector (female side in the top of the neck)
2. New leaf switches
3. Ceramic element - I don't know it's condition. The mic was stored away in an unairconditioned attic for quite a few years.
4. New cord & strain relief spring
5. Gunmetal base needs refinished
6. Not sure about chrome - may need re-done.

I know - I can pick up a used one in seemingly better condition for almost certainly less cost. But this mic has incalculable sentimental value and cannot be replaced. I'd love to return it to like-new condition.

Yes, based on the time of purchase, this obviously was used as a CB mic. In my defense, I was *heavily* into CB radio long *before* the craze hit. All that trucker crap was always a big embarrassment for me; CB was my version of amateur radio - all I could afford (actually more than I could afford) as a high school student. I still own an original Hy-Gain Penetrator 500, complete, and someday I'll find a good use for it. In the meantime, the radio bug has never completely left me and I can see amateur activity in my future.

Does anyone have any advice on where/who/how/whether this can be done? I would most surely appreciate hearing from you. Thank you.

--
Mike

Also, be sure to either wire yourself or buy the straight through
ethernet cables that are wired for the 568-A standard, CAT 5E, enhanced.
Makes a big difference in long runs for connectivity and maybe in RFI.
They will tell you there is no difference in operation between a 568-A
and 568-B, but I can tell you from personal experience there is.

Thanks for all the suggestions, I do appreciate the input. I think Dave hit the nail on the head, namely that all routers will PROBABLY generate something, some worse than others. Dave, I read your reply over and over and I am quite amazed at the tenacity you went after your problem. Didn't sound like an easy bug to chase.
Now on to what I did to MINIMIZE my RFI problem. I say minimize because it's not totally eliminated, but it's at a point where I can tolerate it. My DSL modem and router are about 10 feet apart and I make all my own cables, so I know they are made correctly. I attempted removing all 4 to see if one of the cables to a PC was at fault and none of them were, however when I removed the shorty cable between the modem and the router, the noise stopped (the cable is only about 20 inches long). I tried all kinds of things (and yes, I did put a 6 foot cable in to get away from near resonance on 2 meters), like wrapping the cable in foil, making it into a ball and just moving it around in different positions, etc., but when I used an iron core bead on the ROUTER end and wrapped as much of the cable around it as I could, the problem all but disappeared. Putting the iron at the modem end had no effect. The other thing I did was work an even trade of my old Dlink router with my neighbor for his old Linksys router. The Linksys is in a solid aluminum case (well shielded) and initially helped my problem. This little Linksys has NO plastic on the outside and seems to be a bit quieter because of it.
Lastly, I have all my antennas either outside or 20 feet away up in my attic and on 2, all were affected. I will admit that if I put a rubber duckie on my TS2000 and listen on 2, it was really bad. So the outside, more distant antennas do help. I've only noticed this problem on 2 meters, no where else. HF and 440 seem to be clean.
As Dave suggested, the problem is indeed coming from the routers, whether it be the power supply or just the electronics of Ethernet, I'm not sure. I'm guessing the electronics of the Ethernet is generating the spurs.
I think the Dlink DI-604 is a fine router, it has given me years of perfect service but it looks like time to make a change. I may end up going through several different wireless routers before finding that fits my operation, but I always have the Linksys to fall back on.
Hope this discussion can help others.
Thanks again for the really great suggestions and Happy Holidays to all.

6021. FS Alinco DR-610 VHF/UHF Rig

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-23 22:38:13 UTC
From: Matthew Steger <n3ntj@earthlink.net>
Message-ID: <p%_qf.9633$nm.5500@newsread2.news.atl.earthlink.net>
Source record: 11894

For Sale - Alinco DR-610T - VHF/UHF FM Twin Bander Mobile Transceiver

Rarely used Alinco DR-610T VHF/UHF Radio in Excellent condition. Even still has the factory installed plastic on the detachable front panel as it came out of the box. Great base or mobile rig. Includes the stock EMS-12 Hand mic with full keypad and cables for detaching the radio and the face. EJ-24U CTCSS encode/decode installed. Will run 9600 bps packet as well. Manual included. I may still have the mounting bracket.

Asking $250.00 USD + S/H or Best Offer! See specs below.

Alinco Specs:
Tx: 144.000-147.995/438.000-449.995 MHz FM
Rx: 108.000-173.995 AM/FM / 420.000-470.000 MHz
* Channel Scope (to monitor nearby freqs or channel)
* Full duplex between VHF & UHF
* DSQ selective call
* CTCSS encoder/decoder EJ-24U installed
* Autodialer
* VHF 50W/UHF 35W max. (down to 5 Watts)
* Separatable front panel control with cable EDS-2/3
* UHF x UHF/VHF x VHF operation
* 9600 bps connector for packet
* Time-out-timer
* Remote DTMF control
* S-meter squelch
* 120 memory channels, expandable up to 240 channels

A very nice radio I simply don't need anymore since I've upgraded to a new HF radio with VHF/UHF built in. Easy and fun to use, very nice audio, and still looks like it just came out of the box. Approx. 40~50 hours of use over a 3 year span.

Email me direct. I can email pictures and answer questions.

I had a TS-440S and it had the same problems. Sometimes just decimal points and no numbers; sometimes rolling numbers on the display. I think the processor had some issues as well as the PLL. At times on 10m and 15m, it would just draw huge amounts of current and blow the fuse within tenths of a sec.

Last summer, I took a close lightning strike and it destroyed the radio. Replaced it with a new FT-897D.

Good luck.

I've considered nearly the same thing. Thought about putting a Heil
element in my 'sentimental' UG8 D104 when I get on HF.
http://www.heilsound.com/amateur/hcelements.htm

My story is a lot like yours. I wanted to be on CB since my first part
95 walkie talkies. In '74 I got a real radio, then in 76 I got a
license ;).

I won the unamplified mic & stand at a West Coast Radio Club Jamboree,
then proceeded to mod it. Put a TU Kit in it to turn up the modulation
and talk like a big strapper. Replaced the gray straight cable with a
blue coiled cord from a Turner mic. Added a mechanical bell and
striker to make a fake ping like Browning Eagles.

A person after my own heart. You know what I'm talkin' about. When the Brownings fired up, everyone else just shut up and listened ;~). Remember your first call sign? KOX4151 here.

Thanks for sharing a bit of your story.

Does any one know where I could obtain a copy of a manual and/or schematic for my S40B. It did work at one time but now it won't. There seems to be voltage on the antenna terminal and I don't think that is a good sign.

FreeBees see BAMA at
http://bama.sbc.edu/hallicra.htm

And maybe Nostalgia Air Vintage Radio References
http://www.nostalgiaair.org/

If not lots of manual vendors can supply them
See URL:
http://ac6v.com/manuals.htm

I suggest you use the BAMA site, but if you have a problem, email me if you
want me to email them to you. The schematic is in three sections.

There aren't any likely fault possibilities in the receiver that would cause
a voltage on the antenna terminal. What type of voltage do you see, how
much, and if it's DC what is the polarity?

Even if the capacitor (C33) on the grid of the RF Amp was shorted, you would
measure nothing, because the slight voltage would be well grounded through
the inductors.

Don

their are caps from the ac line to ground maybe one is leaky and
putting the chassis to the hot side of the line reverse the plug and
see if the term. is hot what voltage dc or ac ?? del k9fcm

6041. No link attitude!

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-26 04:29:39 UTC
From: n9zle <NoSpam@nospam.com>
Message-ID: <TkKrf.37462$dO2.31409@newssvr29.news.prodigy.net>
Source record: 11814

No link attitude!

http://www.n9zle.com/forum/

What is it with this no-link to other site attitude?
Years ago when the internet was in its infancy just about any site would add your site as a link from theirs. In return you would do the same. But now it has come to NO-LINKS. Not even in the forums. I have had a website located on tripod for about 9 years over those nine years I had a link to qrz dot com That site received over a million hits. And many users went from that site to qrz and on-to Icomamerica dot com. I have always supported Icom. They have never given a link on their site to mine. I have always supported qrz. But of course he(AA7BQ) never put a link on his site to mine. Well you may say that "I never asked". And that is true. But recently I have noticed he has been deleting my posts. ALL OF THEM. He never contacted me telling me why. AA7BQ just deleted them. I build CIV cables and sell a few of them every week to amateur operators who want them. When I posted one on his site. I found he deleted the post soon after it was placed there.

My beliefs are.
1. QRZ AKA AA7BQ no longer has the amateur radio attitude.
2. AA7BQ has gone fully commercial but calls his site "The Ham Radio Super Site"
3. AA7BQ does not have your best interest in mind.

I can also prove what I am writing here.
For one if he claims he is nothing but a commercial site then why does he ask for donations?
If he is not a commercial site than why will he not allow me to post my CIV cables on his site?

That takes care of number 2
Now for number 1 and 3. If some one knows the truth about something but keeps it from you he is a liar.
No mater how you put it, he is a liar. On the QRZ site Fred is there to help you renew your license. Or so he leads you to believe so. He charges you for it. Mr. Lloyd has never revealed it to any amateurs that you can renew your license or do an address change at the fcc.gov web site for FREE. Yes TOTAL FREE at the FCC web site.
The forms at the FCC web site or no harder to fill out than his.

His CD. He charges 24.95 plus tax and shipping. On that CD is data he obtained from the FCC and got it for FREE, he sales it to you. Also he has software, created by programmers like MYSELF. And MODS that have been made available from the manufactures and other HAMS like ME! I have been contributing to Amateur Radio community for greater than 10 years, and have

received very little for software I created. Never complained when it was copied. I have performed and created several of the MODS for various transceivers. Never asked a penny for it. I never commercialized HAM RADIO. And NEVER took money from some one for something they could get FREE else where.

I am sure many of you would like to ask me "what I am going to do about it?" Here is my answer.

I have created an open forum on my web site http://www.n9zle.com/forum/

There you can post a link to your own site even if it is a commercial site. You can post any ham radio equipment you have for sell on the site.

You can do a callsign lookup at my site from the FCC database, not that stupid qrz thing.
I will soon put together an open source database that I will sell for the price of the CD plus the true cost of shipping. About two bucks total. Once you install the database on your system, you will be able to download updates for FREE. I will make drivers available to programmers to access the database in several different languages and operating systems. I will also attempt to make the database available on the internet for FREE to download.

I only ask for a little help from other HAMS like myself. I need a few elmers that are willing to moderate some of the forums. It is easy and you will find it fun. If you have any suggestions on new forums or sections please logon to my site and make a post.

Just a note to let all you ham operators out there that want to buy
programing software from RT Sytems,Please rethink about it.They do not want
to help you if you have a problem with their software,They are slow in any
contacting and are not willing to help you when in need.
I have bought several programs in the past few years from them for different
Yaesu radios etc.I spent a lot of money on them.Now I need help in getting
one of my programs to work,(one for the FT-8000 radio),and now they say they
will not help me because I have misplaced my box with all my original
software from them.I have explained that I have made copies of all my
software from them so that I do not damage or corrupt the originals as most
everyone does.Now I cannot locate the box with about six programs from them
as I have had to move several times since the programs were purchased.I do
however have the copies and now they refuse to help me out.
So just thought i would pass this on.

Oh stop, be nice!!

My software for the 8000 works.
The one for the FT-50 sucks!
Although the software is OK, I almost ALWAYS
get the damn ERR on the radio when uploading.
Anybody out there using "EVE" or "YARD" for the newer radios?
They had versions for the FT-51 and the VX-5. EXCELLENT!!
Or does anyone know of another software package for the newer radios?

Gen. J. O'Neill

I learned a long time ago to keep mental fruits like you at
arm's length. That way I don't get anon hang up calls
at 2 a.m. in the morning. Next time I talk to RT Sys
I'll mention you. I bet the guy does belley laughs!
ROTFLMAO!

Hmm, if you bought from them they will have a record of your purchases.
I "lost" and before I found the disks, I went back into my record of
purchase, and asked for some "info", they were very helpful!!!

Bob
That is what I thought.They should have a record of the programs I have but
they say no.So that is my problem until I find the originals.I just found
some others that I have ,but not the box with the other FT programs.

George -- if you put yourself in their position for a moment, it would be
obvious why they're reluctant to help you: You only have a copy of the
software, not the original with its VERY important serial number.

The fact that you've purchase several of their programs means you're
quite happy with their products.

Just to offset your potentially damaging post, I'm going to their website
right now to make a purchase. So there.

No 73 for you,

I don't think a 5 wpm Advanced exists. Wasn't Advanced class taken out of
the upgrade path when the 5 wpm classes were established?

>>
>> Just how radio active the needles are was not mentioned. Also I

It's nothing to worry about. They are no different than the "glow in the dark" clock and radio dials from back in the 40's 50's and maybe 60's. There was a small amount of radio active material mixed in with the phorphour causing it to glow.

>> suspect that some R390A went to MARS members and may not have been
>> demilitarized. I had one for many years and this was the first I
>> heard about the needles.

I'd guess this is just a CYA by the government after some lawyer realized the stuff was still out there. The material is *very* low level" and could be hazardous IF you get it in your mouth or a cut" and in today's sue happy society I can see why they might panic. However the stuff is basically harmless unless you provoke it.

I once broke a device in my hands with enough radioactive Cesium in it to really light up the counters. The hazmat team found the device in the lab under a metal pail, a string of clothes down the hall, and me standing in the shower. Again they said as long as I had not put my hands near my mouth, nose, or eyes or gotten the material in some cuts (the counter confirmed I hadn't) they said I did the right thing. BTW, I even got my clothes back. <:-))

Back in the days when they were making the dials, word has it that some of the women doing the painting were getting sick. They'd twirl the end of the brush on their tongues to keep a point on the brush and were ingesting the material.
>

For any one who has been around a while, look at how they treat mercury now and how we used to treat it 50 and 60 years ago. Break a thermomenter and they close a lab while the hazmat team cleans up. We used to "silver" coins and rigs with the stuff and carry it around. I'd guess the Mercury is far more dangerous than any radioactivity from those dials and markings.

Radio Specialty Model 1179-22-1 Repeater------------------$ 50
Appears to be complete, minus crystals.
I have no way to verify operation.
Has 2 settable PL tones...
Outside of case is scuffed, but inside is very clean!
Repeater is in a wall mountable battleship gray cabinet,
that is 4" deep by 13.5" wide, by 21.5" tall, and is
around 30# in weight. It is a VHF base/repeater used by
the BLM out west...
It also has on the front cover, I-5YACC, then under it is
271, under that VHF REPEATER. There are a lot of FCC type
acceptance # all over inside, plus the maker, and maker's
partial address, and part # for transmitter, and receiver
sections.
NO documentation.

2 Kenwood TR-7950-----------------------------------EACH---$ 80
Each comes with mobile mount, and 1st sale gets the
packet adapter. Are in very good shape, but do not include
the TU-79 PL boards which are available at www.piexx.com
They will not come in original box, and if I do not have
the manual, I will photocopy, or pdf one (your choice)...

Standard C468A LNIB---------------------------------------$ 75

LinkXcel PS-141B 4 port KVM Switch with 4 cables-----------$ 65

A few years back I put a Geiger counter within inches of an old Timex
watch with a "radium dial" and it pegged out the meter. It was a
significant amount of radiation if worn on your wrist. Worth the risk?
Not for me.

Anyway have fun with your R390 and it's "radium dial" meter.

Short term, no effect. Long term, years, decades...unknown. Good luck.

6095. HT Battery Info Needed

Newsgroup: rec.radio.amateur.equipment
Date: 2005-12-31 01:02:07 UTC
From: bw <justme@nomail.com>
Message-ID: <jMktf.667649$_o.390375@attbi_s71>
Source record: 11718

I need to get a new battery for my Kenwood TH-G71 hand held and am thinking about going with an after market NiMH type instead of the OEM NiCad.

Two questions:

Are there any recommendations on where to purchase the NiMH battery?

Can I use the original charger on the new battery?

I'm just using the original BC-17 wall charger and the manual says to charge the stock PB-39 NiCad for 15 hours. How do I know how long to charge the NiMH battery and/or how do I know when it's fully charged?

Any info on this is greatly appreciated.

73,
Bruce

>I need to get a new battery for my Kenwood TH-G71 hand held and am thinking
>about going with an after market NiMH type instead of the OEM NiCad.

NiMH has some advantages and some disadvantages over NiCD. Biggest and most obvious advantage is greater capacity. Biggest disadvantage is a somewhat higher self-discharge rate - NiMH batteries can lose 20-30% of their charge per month just sitting on the shelf un-used, while NiCd batteries can hold their charge quite a bit longer.

For this reason, NiMH is probably not the best choice for batteries/packs which will spend weeks or months sitting in your ARES "go-pack" - they'll probably have self-discharged just when you need 'em.

I'm told that some of the new NiMH batteries have a greatly reduced self-discharge rate, but can't recommend specific types or brands.

>Two questions:
>
>Are there any recommendations on where to purchase the NiMH battery?

I've been happy with the couple of purchases that I made from Batteries America (http://www.batteriesamerica.com/). We bought a bunch of the 6-AA-cell battery holders for the Icom W32, and the fit/finish/function of the cases seems as good as Icom's own product at a rather lower cost.

They have several different packs for the TH-G71 available. You get your choice of NiCd or NiMH, with several different combinations of battery voltage and battery capacity. If you'd be satisfied with a maximum transmit power of 3 watts you could go for the NiMH 7.2V 1800 mAh pack, or for full transmit power get any of three 9.6V packs (600 mAh NiCd, or 1100 or 1450 mAh NiMH).

They can also sell you cells, or complete insert sets, if you want to try cracking open your existing battery pack and rebuilding it.

Other vendors may also provide you with a similar range of choices.

>Can I use the original charger on the new battery?
>
>I'm just using the original BC-17 wall charger and the manual says to charge
>the stock PB-39 NiCad for 15 hours. How do I know how long to charge the

>NiMH battery and/or how do I know when it's fully charged?

As a general rule, you _can_ use a charger designed for NiCd batteries with NiMH batteries, but may not get the best results (in terms of total capacity and/or number of charge/discharge cycles).

The PB-39 sounds like a standard "trickle" charger, with a low and coarsely-regulated charge current. You can probably use this, and just multiply the original charge-time specification by the ratio of the packs' capacities. If the stock pack took 15 hours and was in the range of 600 mAh, then an 1100 mAh pack would take almost 30 hours.

For fast-charging, it's best to have a charger which "understands" the charge-cutoff behavior of NiMH batteries. A fast-charger for NiCd batteries will usually charge until the battery starts to heat up... this can be detected because the battery's terminal voltage stops rising, and actually starts falling a bit. The charger detects this "negative delta V" condition and shuts off the charge (or switches back to a trickle-charge).

This method will actually overcharge a NiMH battery. NiMH is happier with a "zero delta V" shutoff... the charger switches off the fast-charge when the battery voltage stops rising, before it begins falling.

Getting the best out of a NiMH battery seems to be a someone controversial topic... not unlike the question of charging gel cells, AGM batteries, and so forth. Lots of opinions, not a lot of completely solid answers. The best information I've been able to find about NiMH suggests:

- The best recharge regime is a fast-charge (at C/2 rate or so), with several different mechanisms used to detect full charge and shut off the fast-charge current: zero-delta-V, a temperature-rise sensor, and a timer for safety.

- Following the fast-charge with a few hours of low-current trickle charging can be beneficial in cramming the last little bit of capacity into the battery.

- NiMH batteries may not deliver their full advertised capacity until they've been through several cycles of "full charge, nearly full discharge."

- Like NiCds, it's best not to run NiMH batteries all the way down to zero - they don't like the resulting "reverse charging" impact on their weaker cells. When they're drained to 1.0 volts per cell, consider them fully discharged!

- If you're going to store NiMH batteries for an extended period, discharge them to the 1.0 volt level first. Recharge 'em before you use 'em.

That appears to be the company that took over
Transworld.....you can see some of this equipment in the Jane's
Millitary Manuals. Nice equipment. I had a couple of TW100s for awhile, or
were they TW1000s?
It's been a few years.

I have a Yaesu FT-102 HF Transceiver for sale. This one was Malcomized by Mal, NC4L in March of 1997. It has had all of the relays replaced plus other upgrades performed by Mal. It has a CW Filter but no AM/FM Board. Cosmetically it is in good but not mint shape. The cabinet looks good and the front panel is nice. There are some nicks and scratches mainly on the trim around the front panel. It works but has problems. On bands above 20 meters, sensitivity is low as is power output. It loads up to over 100 watts on 20. On 40 meters the VFO does not change frequency. One meter lamp is burned out. Price is $425 plus shipping. No mic or manual. Thanks, Charlie Hugg, K5MBX

Hello John
The K-2 is a very good radio, don't know how much experience
you have with kit building, but would not try the K-2 as first bite
it has taken some op's months to finish their K-2
If you have lots of solid state kit experience
go for it, if not try geting a few smaller projects under your belt

started playing around building qrp kits about 5 years ago
had not built a kit since the 60's
found out first thing
new solid state radio parts, are not big and beefy like the old days

that with out a good magnifying light
(not a cheep magnifying light, found out the hard way, had to go out
and buy a good light, after I had wasted cash on the cheep one)
I could not even id the parts #'s,
also
had to also buy a good soldering station few other tools
but then, I was on my way

built a 2 fer transmitter and then a dc style receiver,

then the Red Hot Radio Nor Cal 20
when I opened up the parts bag
thought oh no,
I have truly biten off more than I can chew

did not try to act like I was
big time radio op, ex signal corps microwave radio repair
and think I could short cut or 2nd guess building steps

took my time followed instructions to the letter

8 hours latter was finished and it worked,
since then have built about a dozen other new age qrp style kits
have had lots of fun, wonders of wonders all of them worked first try

this is from a hard core lover of tube gear
you can see some of my simple tube transmitters in oct 05 CQ mag

what to first build depends on your experience, skills, and
how brave you are, yes some ops with out any kit building
experience have built the K-2

Small Wonder Labs makes lots of very nice easy to build kits
Love my 40 meter DSW, lots of fun in a very small box,

might want to try a easy simple, cheap kit
before you melt solder, on a radio kit that set you back over $1,000

but man oh man, yet to talk to anybody that owns a K-2
that does not love the radio

yours truly Mac dit dit

Motorola claimed that their NiMH cellular batteries for the old "flip phones"
lost as much as 1/3 of their charge in the first week. My casual experiments
showed me they were pretty close.

Contrary to many maker's claims NiMH cells do develop "memory". When
flip phones were popular people used to give me their old batteries that
would no longer hold a charge. 99% of them were NiMH and most of them came
back to normal after being "reconditioned".

They were reconditioned by a charger that did three discharge/charge cycles
in a row. It was a "smart" charger, it could determine if a battery was NiCad
or NiMH and charge accordingly.

I've never dealt with them, but my recemendation is for AA packs.
You can charge them more easily in stand alone chargers, mine will do six
at a time. You can also keep a set of NiCads or alkeline batteries for
an emergency spare.

If you do keep a set of alkeline batteries make sure to buy a good brand,
and rotate them.

> They can also sell you cells, or complete insert sets, if you want to
> try cracking open your existing battery pack and rebuilding it.

Being far away from ordering the batteries from companies catering to
the ham replacment market, I've done it often with battery packs sold
for cordless phones. They come in many sizes and capacities. Make sure

to remove and re-install any diodes, heat sensors, fuses, etc in the
old pack.

> As a general rule, you _can_ use a charger designed for NiCd batteries
> with NiMH batteries, but may not get the best results (in terms of
> total capacity and/or number of charge/discharge cycles).

I agree with that. It's also important to make sure that your charger
really does work propely. Over the years, I've bought several used
packs that were "cooked" by bad chargers, or overcharging. I've even
had an Icom one that cooked batteries on its own. :-(

Geoff.

Why can't someone come up with a simple one-sentence or
one-paragraph answer in human language such as "I like it - it was
easy to build and easy to operate" (or the opposite) before spewing
out a string of URLs?

Here's mine -

I don't own one yet, but I have several ham friends who do and are
totally pleased with it. I may get one this year (2006) but I will
have to have someone build it for me (yes, there are folks who will
do that) because I'm partially blind and can't do fine soldering
anymore.

There - was that so hard?

Source record: 11731

Help: Ameritron AL-82 blown fuses
I bought an Ameritron AL-82 and it sat for over a year.
Worked perfect before that. Now when you turn it on
the two fuses on back of amp blow. So I replaced the two fuses
and this time I left the top cover off and it comes on. No problem.
The minute you pust the button down where the top cover goes on, it
will blow the two fuses again. The button is a safety feature.
Can someone tell me what I may need to check and replace?
Thanks and Happy New Year.....Rich
